Lenovo G70-35
User Guide

⚠️ ⚠️ ⚠️
Read the safety notices and important tips in the included manuals before using your computer.
Notes

- Before using the product, be sure to read Lenovo Safety and General Information Guide first.
- Some instructions in this guide may assume that you are using Windows® 8.1. If you are using other Windows operating system, some operations may be slightly different. If you are using other operating systems, some operations may not apply to you.
- The features described in this guide are common to most models. Some features may not be available on your computer or your computer may include features that are not described in this user guide.
- The illustrations in this manual may differ from the actual product. Please refer to the actual product.

Regulatory Notice

- For details, refer to Guides & Manuals at http://support.lenovo.com.

</table>

**Note**: You can enable/disable the touchpad by pressing `fn`. 
Using the keyboard

Your computer has number keys and function keys and may also have a numeric keypad incorporated into its standard keyboard.

**Numeric keypad**

The keyboard has a separate numeric keypad. To enable or disable the numeric keypad, press the **Num Lock** key.

**Function key combinations**

Through the use of the function keys, you can change operational features instantly. To use this function, press and hold **Fn**; then press one of the function keys.

- **Fn + Home:** Activates the pause function.
- **Fn + End:** Activates the break function.
- **Fn + PgUp:** Enables/disables the scroll lock.
- **Fn + PgDn:** Activates the system request.
Chapter 1. Getting to know your computer

Hotkeys

You can access certain system settings quickly by pressing the appropriate hotkeys.

<table>

<tr>
<td>Enables/disables the touchpad.</td>
<td>Increases the display brightness.</td>
</tr>
</tbody>
</table>

**Note:** If you changed the Hotkey Mode from **Enabled** to **Disabled** in the BIOS setup utility, you will need to press the Fn key in combination with the appropriate hotkey.
Chapter 1. Getting to know your computer

Left-side view

1. **AC power adapter jack**
   - Connect the AC power adapter here.

2. **Novo button**
   - When the computer is off, press this button to start the Lenovo OneKey Recovery System or the BIOS setup utility, or to enter the boot menu.
   - **Note:** For details, see “Lenovo OneKey Recovery System” on page 18.

3. **Ventilation slots**
   - Dissipate internal heat.
   - **Note:** Make sure that the ventilation slots are not blocked or else the computer may overheat.

4. **VGA port**
   - Connects to external display devices.

5. **RJ-45 port**
   - Connects the computer to an Ethernet network.
   - **Note:** For details, see “Connecting network cables” on page 6.

6. **HDMI port**
   - Connects to devices with HDMI input such as a TV or an external display.

7. **USB port**
   - Connects to USB devices.
   - **Notes:**
     - The blue port is a USB 3.0 port.
     - For details, see “Connecting USB device” on page 7.
Chapter 1. Getting to know your computer

- **Connecting network cables**
  To insert a network cable, do the following:
  1. Hold one connector of the network cable to press the RJ-45 cover down gently 1.
  2. Insert the connector into the RJ-45 port 2.

**Software configuration**

Consult your Internet Service Provider (ISP) for details on how to configure your computer.
Connecting USB device

You can connect a USB device to your computer by inserting its USB plug (Type A) into the USB port on your computer.

The first time you plug a USB device into a particular USB port on your computer, Windows automatically installs a driver for that device. After the driver has been installed, you can disconnect and reconnect the device without performing any additional steps.

**Note:** Typically, Windows detects a new device after it has been connected, and then installs the driver automatically. However, some devices may require you to install the driver before connecting. Check the documentation provided by the device’s manufacturer before connecting the device.

Before disconnecting a USB storage device, make sure your computer has finished transferring data to that device. Click the **Safely Remove Hardware and Eject Media** icon in the Windows notification area to remove the device before disconnecting.

**Note:** If your USB device uses a power cord, connect the device to a power source before connecting it. Otherwise, the device may not be recognized.
Chapter 1. Getting to know your computer

Right-side view

1. **Combo audio jack**
   - Connects to headsets.

   **Notes:**
   - The combo audio jack does not support conventional microphones by default.
   - The recording function might not be supported if third-party headphones or headsets are connected, due to different industry standards.

2. **Memory card slot**
   - Insert memory cards (not supplied) here.

   **Note:** For details, see “Using memory cards (not supplied)” on page 9.

3. **USB port**
   - Connects to USB devices.

   **Notes:**
   - The blue port is a USB 3.0 port.
   - For details, see “Connecting USB device” on page 7.

4. **Optical drive**
   - Reads/burns optical discs.

   **Note:** Some models are supplied with a dummy optical disc drive.

5. **Kensington lock slot**
   - Attach a security lock (not supplied) here to help protect your computer from theft and unauthorized use. You can attach a security lock to your computer to help prevent it from being removed without your permission. For details on installing the security lock, please refer to the instructions shipped with the security lock that you have purchased.

   **Notes:**
   - Before purchasing any security product, verify that it is compatible with this type of security keyhole.
   - You are responsible for evaluating, selecting, and implementing the locking devices and security features. Lenovo offers no comment, judgment, or warranty regarding the function, quality, or performance of locking devices and security features.
Using memory cards (not supplied)

Your computer supports the following types of memory cards:

- Secure Digital (SD) card
- MultiMediaCard (MMC)

**Notes:**
- Insert *only* one card in the slot at a time.
- This card reader does not support SDIO devices (e.g., SDIO Bluetooth and so on.).

Inserting a memory card

Slide the memory card in until it clicks into place.

**Note:** If a dummy card is shipped with the computer, push the dummy card and then remove it before inserting a memory card.

Removing a memory card

Gently pull the memory card out of the memory card slot.

**Note:** Before removing the memory card, disable it by using the Windows safely remove hardware and eject media utility to avoid data corruption.

1 Battery pack latch - manual  
2 Battery pack  
3 Battery pack latch - spring-loaded  
4 Ventilation slots  
5 Speakers

The manual battery pack latch is used to keep the battery pack secured in place.

The spring-loaded battery pack latch keeps the battery pack secured in place.

Allow air to enter the computer for cooling.

Provide audio output.
Chapter 2. Starting to use Windows 8.1

Configuring the operating system for the first time

You may need to configure the operating system when it is first used. The configuration process may include the procedures below:
- Choosing a region and a language
- Accepting the license terms
- Personalizing your computer
- Configuring the Internet connection
- PC settings
- Creating a user account

Switching screens

To switch from the Start screen to the Windows desktop, do one of the following:
- Select the Windows desktop tile on the Start screen.
- Press the Windows key + D.

To switch from the desktop to the Start screen, do one of the following:
- Select Start from the charms bar.
- Press the Windows key.
- Move the cursor to the lower-left corner, and then select the Start button.

To switch different apps, do the following:
1. By using a mouse or the touchpad, move the cursor to upper-left corner and then slide it downwards.
2. When the apps list appears, click to switch apps.
The charms

Charms are navigation buttons that let you control your Windows® 8.1 experience. Charms include: Search, Share, Start, Devices, and Settings. The Charms Bar is the menu that contains the charms.

The five charms provide new and faster ways to perform many basic tasks, and are always available regardless of whichever app you are currently in.

To display the charms, do one of the following:

- Move the cursor to the upper-right or lower-right corner until the charms bar is displayed.
- Press Windows key + C.

Search charm

The Search charm is a powerful new way to find what you are looking for, including settings, files, Web images, Web videos, etc.
Chapter 2. Starting to use Windows 8.1

**Share charm**

The Share charm lets you send links, photos, and more to your friends and social networks without leaving the app you are in.

**Start charm**

The Start charm is a fast way to go to the Start screen.

**Devices charm**

The Devices charm allows you to connect or send files to any external devices, including the devices to play, print, and project.

**Settings charm**

The Settings charm lets you perform basic tasks, such as setting the volume or shutting down the computer. Also, you can get to the Control Panel through the Settings charm when on the Desktop screen.
Putting the computer to sleep or shutting it down

When you have finished working with your computer, you can put it to sleep or shut it down.

Putting your computer to sleep

If you will be away from your computer for only a short time, put the computer to sleep. When the computer is in sleep mode, you can quickly wake it to resume use, bypassing the startup process.

To put the computer to sleep, do one of the following:
- Close the display lid.
- Press the Power button.
- Right-click the **Start** button in the lower-left corner and select **Shut down or sign out → Sleep**.
- Open the charms, and then select **Settings → Power → Sleep**.

**Note:** Wait until the power indicator light starts blinking (indicating that the computer is in sleep mode) before you move your computer. Moving your computer while the hard disk is spinning can damage the hard disk, causing loss of data.

To wake the computer, do one of the following:
- Press any key on the keyboard.
- Press the Power button.

**Note:** Only available to the factory settings.

Shutting down the computer

If you are not going to use your computer for a long time, shut it down.

To shut down the computer, do one of the following:
- Open the charms, and then select **Settings → Power → Shut down**.
- Right-click the **Start** button in the lower-left corner and select **Shut down or sign out → Shut down**.
- Select **Shut down** in the upper-right corner of the Start screen.

**Note:** The operation depends on the BIOS setup. Please refer to the actual product.
Chapter 2. Starting to use Windows 8.1

Connecting to a wireless network

Enabling wireless connection

1. Press \( \text{to disable airplane mode.} \)
2. Open the charms and select Settings \( \rightarrow \) to open the network configuration page.

Connecting to a wireless network

After wireless has been enabled, the computer will automatically scan for available wireless networks and display them in the wireless network list. To connect to a wireless network, click the network name in the list, and then click Connect.

Note: Some networks require a network security key or passphrase for connection. To connect to one of those networks, ask the network administrator or the Internet service provider (ISP) for the security key or passphrase.
If you have a problem with the operating system, see the Windows Help and Support file. To open the Windows Help and Support file, do one of the following:

- Select **Settings** charm, then select **Help**.
- Press **F1** or **Fn + F1** (depending on your keyboard layout).

You can read the Windows Help and Support file on your computer. You can also get online help and support by clicking on one of the two links listed under **More to explore**.

**Note:** Windows 8.1 also provides an app, **Help + Tips**. You can find it on the Start screen, to learn more information on new features of Windows 8.1.
Chapter 3. Lenovo OneKey Recovery System

The Lenovo OneKey Recovery System is software designed to back up and restore your computer. You can use it to restore the system partition to its original status in case of a system failure. You can also create user backups for easy restoration as required.

**Notes:**
- If your computer is preinstalled with a GNU/Linux operating system, OneKey Recovery System is not available.
- To utilize the features of the OneKey Recovery System, your hard disk already includes a hidden partition by default to store the system image file and the OneKey Recovery System program files. This default partition is hidden for security reasons, which explains why the available disk space is less than the stated capacity.

### Backing up the system partition

You can back up the system partition to an image file. This image file can be used to restore the system partition. To back up the system partition:

1. In Windows, press the Novo button or double-click OneKey Recovery icon to start the Lenovo OneKey Recovery System.
2. Click **System Backup**.
3. Select a back-up location and click **Next** to start the backup.

**Notes:**
- You can choose a back-up location on the local hard disk drive or an external storage device.
- Remove the removable hard disk drive before starting the Lenovo OneKey Recovery System. Otherwise, data from the removable hard disk drive might be lost.
- The back-up process may take a while.
- The back-up process is only available when Windows can be started normally.

### Restoring

You can choose to restore the system partition to its original status or to a previously created back-up point. To restore the system partition:

1. In Windows, press the Novo button or double-click OneKey Recovery icon to start the Lenovo OneKey Recovery System.
2. Click **System Recovery**. The computer will restart to the recovery environment.
3. Follow the on-screen instructions to restore the system partition to its original status or to a previously created back-up point.

**Notes:**
- The recovery process is irreversible. Make sure to back up any data you wish to save on the system partition before starting the recovery process.
- The recovery process may take a while. So be sure to connect the AC power adapter to your computer during the recovery process.
- The above instructions should be followed when Windows can be started normally.

If Windows cannot be started, then follow the steps below to start the Lenovo OneKey Recovery System:

1. Shut down the computer.
2. Press the Novo button. From **Novo Button Menu**, select **System Recovery** and press Enter.
Chapter 4. Troubleshooting

Frequently asked questions

This section lists frequently asked questions by category.

Finding information

What safety precautions should I follow when using my computer?

The Lenovo Safety and General Information Guide which came with your computer contains safety precautions for using your computer. Read and follow all the precautions when using your computer.

Where can I find the hardware specifications for my computer?

You can find the hardware specification for your computer on the printed flyers which came with your computer.

Where can I find warranty information?

For detailed warranty information on this machine, please visit below website to check out: support.lenovo.com/warrantystatus.

Drivers and preinstalled software

Where are the installation discs for Lenovo preinstalled software (desktop software)?

Your computer did not come with installation discs for Lenovo preinstalled software. If you need to reinstall any preinstalled software, you can find the installation program on the D partition of your hard disk. If you cannot find the installation program there, you can also download it from the Lenovo consumer support website.

Where can I find drivers for the various hardware devices of my computer?

If your computer is preinstalled with a Windows operating system, Lenovo provides drivers for all the hardware devices that you need on the D partition of your hard disk. You can also download the latest device drivers from the Lenovo consumer support website.

Lenovo OneKey Recovery System

Where are the recovery discs?

Your computer did not come with any recovery discs. Use the Lenovo OneKey Recovery System if you need to restore the system to its original factory status.

What can I do if the back-up process fails?

If you can start the backup but it fails during the back-up process, try the following steps:
1. Close all open programs, and then restart the back-up process.
2. Check to see if the destination media is damaged. Select another path and then try again.

When do I need to restore the system to its factory status?

Use this feature when the operating system fails to start up. If there is critical data on the system partition, back it up before starting recovery.
Chapter 4. Troubleshooting

- BIOS setup utility

What is the BIOS setup utility?
The BIOS setup utility is a ROM-based software. It displays basic computer information and provides options for setting boot devices, security, hardware mode, and other preferences.

How can I start the BIOS setup utility?
To start the BIOS setup utility:
1. Shut down the computer.
2. Press the Novo button and then select BIOS Setup.

How can I change the boot mode?
There are two boot modes: UEFI and Legacy Support. To change the boot mode, start the BIOS setup utility and set boot mode to UEFI or Legacy Support on the boot menu.

When do I need to change the boot mode?
The default boot mode for your computer is UEFI mode. If you need to install a legacy operating system, such as Windows, Linux or Dos, etc. (that is, any operating system before Windows 8) on your computer, you must change the boot mode to Legacy Support. The legacy operating system, such as Windows, Linux or Dos, etc. cannot be installed if you don’t change the boot mode.

- Getting help

How can I contact the customer support center?
### Troubleshooting

#### Display problems

<table>
<thead>
<tr>
<th>Problem Description</th>
<th>Solution</th>
</tr>
</thead>
</table>
| When I turn on the computer, nothing appears on the screen. | - If the screen is blank, make sure that:  
  - The AC power adapter is connected to the computer, and the power cord is plugged into a working electrical outlet.  
  - The computer power is on. (Press the Power button again for confirmation.)  
  - If you are using the AC power adapter or the battery, and the battery status indicator is on, press **F12** (                             ) to make the screen brighter.  
  - If these items are properly set, and the screen remains blank, have the computer serviced. |
| When I turn on the computer, only a white cursor appears on a blank screen. | - Restore backed-up files to your Windows environment or the entire contents of your hard disk to its original factory contents using the Lenovo OneKey Recovery System. If you still see only the cursor on the screen, have the computer serviced. |
| The screen goes blank while the computer is on.           | - Your screen saver or power management may be enabled. Do one of the following to exit from the screen saver or to resume from sleep mode:  
  - Touch the touchpad.  
  - Press any key on the keyboard.  
  - Press the Power button.  
  - Press **F9** (                             ) to confirm whether the backlight of the LCD screen has been turned off.  
  - If the problem persists, follow the solution in the next problem “The screen is unreadable or distorted.” |
| The screen is unreadable or distorted.                    | - Make sure that:  
  - The display device driver is installed correctly.  
  - The screen resolution and color quality are correctly set.  
  - The monitor type is correct. |
| Incorrect characters appear on the screen.                | - Is the operating system or programs installed correctly?  
  If they are installed and configured correctly, have the computer serviced. |
Chapter 4. Troubleshooting

**BIOS password problems**

I forgot my password.

- If you forget your user password, ask the system administrator to clear your user password.
- If you forget your hard disk drive password, a Lenovo authorized servicer cannot reset your password or recover data from the hard disk. You must take your computer to a Lenovo authorized servicer or a marketing representative to have the hard disk drive replaced. Proof of purchase is required, and a fee will be charged for parts and service.
- If you forget your administrator password, a Lenovo authorized servicer cannot reset your password. You must take your computer to a Lenovo authorized servicer or a marketing representative to have the system board replaced. Proof of purchase is required, and a fee will be charged for parts and service.

**Sleep problems**

The critical low-battery error message appears, and the computer immediately turns off.

- The battery power is getting low. Connect the AC power adapter to the computer, or replace the battery pack with a fully charged one.

The computer enters sleep mode immediately after Power-on self-test (POST).

- Make sure that:
  - The battery pack is charged.
  - The operating temperature is within the acceptable range.

**Note:** If the battery pack is charged and the temperature is within range, have the computer serviced.

The computer does not return from sleep mode, and the computer does not work.

- If your computer is in sleep mode, connect the AC power adapter to the computer, then press any key or the Power button.
- If the system still does not return from sleep mode, stops responding, or cannot be turned off, reset the computer. Unsaved data may be lost. To reset the computer, press and hold the Power button for four seconds or more. If the computer is still not reset, remove the AC power adapter.
## Chapter 4. Troubleshooting

### Sound problems

No sound can be heard from the speaker even when the volume is turned up.

- Make sure that:
  - The Mute function is off.
  - The combo audio jack is not being used.
  - Speakers are selected as the playback device.

### Battery pack problems

Your computer shuts down before the battery status indicator shows empty.

- Make sure that:
  - Reset the battery gauge using Lenovo Energy Management.
  - If the problem persists, replace with a new battery pack.

Your computer operates after the battery status indicator shows empty.

- The surge protector in the battery pack might be active. Turn off the computer for one minute to reset the protector; then turn on the computer again.

The computer does not operate with a fully charged battery pack.

- The surge protector in the battery pack might be active. Turn off the computer for one minute to reset the protector; then turn on the computer again.

### A hard disk drive problem

The hard disk drive does not work.

- Make sure that the hard disk drive is included in the **Boot** menu in the BIOS setup utility correctly.

### OneKey Recovery System problems

Backup cannot be made.

- Make sure that you are currently using a Windows operating system.
- There may not be enough space to store the backed-up data. You will need to free more hard disk space on your backup’s partition.

Failure to restore system partition to factory default.

- The system partition (e.g. the partition size or the drive capacity of C) has been modified.

</tbody>
</table>
Appendix A. CRU instructions

Notes:
- The CRU service is only applicable to certain countries.
- Make sure the battery pack has been removed before replacing any devices.

Replacing the battery pack

Note: Use only the battery pack provided by Lenovo. Any other battery pack could ignite or explode.

To replace the battery pack, do the following:
1. Turn off the computer. Disconnect the AC power adapter and all cables from the computer.
2. Close the computer display and turn the computer over.
3. Unlock the manual battery pack latch. Slide the spring-loaded latch to the unlocked position to eject the battery pack. Lift up the inner edge of the battery pack, pivoting it on the outer edge. Gently raise the battery pack in the indicated direction to remove it.
4. Install a fully charged battery pack.
5. Slide the manual battery pack latch to the locked position.
6. Turn the computer over again.
7. Connect the AC power adapter and the cables to the computer.
Replacing the hard disk drive

You can increase the storage capacity of your computer by replacing the hard disk drive with one of greater capacity. You can purchase a new hard disk drive from your reseller or Lenovo marketing representative.

Notes:
• Replace the hard disk drive only if you upgrade it or have it repaired. The connectors and bay of the hard disk drive were not designed for frequent changes, or drive swapping.
• The preinstalled softwares are not included on an optional hard disk drive.

Handling a hard disk drive
• Do not drop the drive or subject it to physical shocks. Put the drive on a material, such as soft cloth, that absorbs the physical shock.
• Do not apply pressure to the cover of the drive.
• Do not touch the connector.

The drive is very sensitive. Incorrect handling can cause damage and permanent loss of data on the hard disk. Before removing the hard disk drive, make a backup copy of all the information on the hard disk, and then turn the computer off. Never remove the drive while the system is operating or in sleep mode.
To replace the hard disk drive, do the following:

1. Turn off the computer. Disconnect the AC power adapter and all cables from the computer.
2. Close the computer display and turn the computer over.
3. Remove the battery pack. For details, see “Replacing the battery pack” on page 25.
4. Remove the Optical drive/Hard disk drive/Memory/Central processing unit/Mini PCI Express Card slot compartment cover.
   a. Remove the screws that secure the compartment cover 1.
   b. Remove the compartment cover 2.
Appendix A. CRU instructions

5. Remove the frame fixing screws 3.

6. Pull the hard disk drive tab in the direction shown by arrow 4.
Appendix A. CRU instructions

7. Take out the hard disk drive secured in a metal frame.

8. Remove the screws and detach the metal frame from the hard disk drive.
9. Attach the metal frame to a new hard disk drive and tighten the screws.
10. Put the hard disk drive gently into the hard disk drive bay with the tab facing upwards and the connectors facing each other; then push it firmly into place.
11. Reinstall the frame fixing screws.
12. After aligning the attachment clips with their matching gaps, reinstall the compartment cover.
13. Reinstall and tighten the screws.
14. Reinstall the battery pack.
15. Turn the computer over again.
16. Connect the AC power adapter and the cables to the computer.
Replacing memory

You can increase the amount of memory in your computer by installing double-data-rate three synchronous dynamic random access memory (DDR3 SDRAM)-available as an option-in the memory slot of your computer. DDR3 SDRAM is available in various capacities.

**Note:** Use only the memory types supported by your computer. If you incorrectly install optional memory, or install an unsupported memory type, a warning beep will sound when you try to start the computer.

To replace a DDR3 SDRAM, do the following:

1. Touch a metal table or a grounded metal object to reduce any static electricity in your body, which could damage the DDR3 SDRAM. Do not touch the contact edge of the DDR3 SDRAM.
2. Turn off the computer. Disconnect the AC power adapter and all cables from the computer.
3. Close the computer display and turn the computer over.
4. Remove the battery pack. For details, see “Replacing the battery pack” on page 25.
5. Remove the Optical drive/Hard disk drive/Memory/Central processing unit/Mini PCI Express Card slot compartment cover.
   a. Remove the screws that secure the compartment cover.
   b. Remove the compartment cover.

![Diagram of computer bottom with screws and compartment cover]
Remove the DDR3 SDRAM by pressing out on the latches on both edges of the socket at the same time. Be sure to save the old DDR3 SDRAM for future use.

Align the notch of the DDR3 SDRAM with the protrusion of the socket and gently insert the DDR3 SDRAM into the socket at a 30-45° angle.

Push the DDR3 SDRAM inward toward the socket until the latches on both edges of the socket are pushed into the closed position.

After aligning the attachment clips with their matching gaps, reinstall the compartment cover.

Reinstall and tighten the screws.

Reinstall the battery pack.

Turn the computer over again.

Connect the AC power adapter and the cables to the computer.

To make sure that the DDR3 SDRAM is installed correctly, do as follows:

1. Shut down the computer.
2. Press the Novo button and then select BIOS Setup. The BIOS setup utility screen opens. The System Memory item shows the total amount of memory installed in your computer.
Replacing the thermal fan

To replace the thermal fan, do the following:

1. Turn off the computer. Disconnect the AC power adapter and all cables from the computer.
2. Close the computer display and turn the computer over.
3. Remove the battery pack. For details, see “Replacing the battery pack” on page 25.
4. Remove the Optical drive/Hard disk drive/Memory/Central processing unit/Mini PCI Express Card slot compartment cover.
   a. Remove the screws that secure the compartment cover 1.
   b. Remove the compartment cover 2.

5. Disconnect the thermal fan connector in the direction shown by arrow 3. Remove the screws that secure the thermal fan 4.

**Note:** Be careful not to damage the thermal fan connector.
Appendix A. CRU instructions

6. Remove the thermal fan.

7. Install the new thermal fan and reconnect the thermal fan connector. Make sure that the connector is attached firmly.

8. Reinstall and tighten the screws.

9. Reinstall the compartment cover and tighten the screws.

10. Reinstall the battery pack.

11. Turn the computer over again.

12. Connect the AC power adapter and the cables to the computer.
To replace the keyboard, do the following:

1. Turn off the computer. Disconnect the AC power adapter and all cables from the computer.
2. Close the computer display and turn the computer over.
3. Remove the battery pack. For details, see “Replacing the battery pack” on page 25.
4. Remove the Optical drive/Hard disk drive/Memory/Central processing unit/Mini PCI Express Card slot compartment cover.
   a. Remove the screws that secure the compartment cover 1.
   b. Remove the compartment cover 2.
Appendix A. CRU instructions

5 Remove the screws that secure the keyboard.

6 Turn the computer over, and then open the display. Loosen the keyboard with fingers, and then lift the keyboard slightly.
Appendix A. CRU instructions

7 Disconnect the connectors in the direction shown by arrows 5 and 6. Then remove the keyboard.

8 Reconnect the keyboard connector and install the new keyboard. Push the keyboard gently until it clicks into place.

Note: Make sure that the keyboard connector is attached firmly.

9 Close the computer display and turn the computer over.
10 Reinstall and tighten the screws.
11 Reinstall the compartment cover and tighten the screws.
12 Reinstall the battery pack.
13 Turn the computer over again.
14 Connect the AC power adapter and the cables to the computer.
Removing the optical drive

To remove the optical drive, do the following:

1. Turn off the computer. Disconnect the AC power adapter and all cables from the computer.
2. Close the computer display and turn the computer over.
3. Remove the battery pack. For details, see “Replacing the battery pack” on page 25.
4. Remove the Optical drive/Hard disk drive/Memory/Central processing unit/Mini PCI Express Card slot compartment cover.
   a. Remove the screws that secure the compartment cover 1.
   b. Remove the compartment cover 2.
Appendix A. CRU instructions

5. Remove the screw shown in the illustration.
6. Gently pull the optical drive out.
The following table provides a list of CRUs (Customer Replaceable Units) for your computer and informs you of where to find replacement instructions.
