About this manual

This manual contains service and reference information for the following ThinkPad® products.

ThinkPad T430u
    Machine Type (MT): 3351, 3352, 3353, 6273, and 8614

Use this manual along with the advanced diagnostic tests to troubleshoot problems.

Important:
    This manual is intended only for trained service technicians who are familiar with ThinkPad products. Use this manual along with the advanced diagnostic tests to troubleshoot problems effectively.
    Before servicing a ThinkPad product, be sure to read all the information in Chapter 1 “Safety information” on page 1 and Chapter 2 “Important service information” on page 21.
Chapter 1. Safety information

This chapter presents following safety information that you need to be familiar with before you service a ThinkPad notebook computer.

- “General safety” on page 1
- “Electrical safety” on page 2
- “Safety inspection guide” on page 3
- “Handling devices that are sensitive to electrostatic discharge” on page 3
- “Grounding requirements” on page 4
- “Safety notices (multilingual translations)” on page 4

General safety

Follow these rules to ensure general safety:

- Observe good housekeeping in the area of the machines during and after maintenance.
- When lifting any heavy object:
  1. Ensure that you can stand safely without slipping.
  2. Distribute the weight of the object equally between your feet.
  3. Use a slow lifting force. Never move suddenly or twist when you attempt to lift.
  4. Lift by standing or by pushing up with your leg muscles; this action removes the strain from the muscles in your back. Do not attempt to lift any object that weighs more than 16 kg (35 lb) or that you think is too heavy for you.
- Do not perform any action that causes hazards to the customer, or that makes the equipment unsafe.
- Before you start the machine, ensure that other service technicians and the customer’s personnel are not in a hazardous position.
- Place removed covers and other parts in a safe place, away from all personnel, while you are servicing the machine.
- Keep your tool case away from walk areas so that other people will not trip over it.
- Do not wear loose clothing that can be trapped in the moving parts of a machine. Ensure that your sleeves are fastened or rolled up above your elbows. If your hair is long, fasten it.
- Insert the ends of your necktie or scarf inside clothing or fasten it with a nonconductive clip, about 8 centimeters (3 inches) from the end.
- Do not wear jewelry, chains, metal-frame eyeglasses, or metal fasteners for your clothing.

**Attention:** Metal objects are good electrical conductors.

- Wear safety glasses when you are hammering, drilling, soldering, cutting wire, attaching springs, using solvents, or working in any other conditions that might be hazardous to your eyes.
- After service, reinstall all safety shields, guards, labels, and ground wires. Replace any safety device that is worn or defective.
- Reinstall all covers correctly before returning the machine to the customer.
- Fan louvers on the machine help to prevent overheating of internal components. Do not obstruct fan louvers or cover them with labels or stickers.
Electrical safety

Observe the following rules when working on electrical equipment.

Important:

- Use only approved tools and test equipment. Some hand tools have handles covered with a soft material that does not insulate you when working with live electrical currents. Many customers have, near their equipment, rubber floor mats that contain small conductive fibers to decrease electrostatic discharges. Do not use this type of mat to protect yourself from electrical shock.

- Find the room emergency power-off (EPO) switch, disconnecting switch, or electrical outlet. If an electrical accident occurs, you can then operate the switch or unplug the power cord quickly.

- Do not work alone under hazardous conditions or near equipment that has hazardous voltages.

- Disconnect all power before:
  - Performing a mechanical inspection
  - Working near power supplies
  - Removing or installing main units

- Before you start to work on the machine, unplug the power cord. If you cannot unplug it, ask the customer to power-off the wall box that supplies power to the machine, and to lock the wall box in the off position.

- If you need to work on a machine that has exposed electrical circuits, observe the following precautions:
  - Ensure that another person, familiar with the power-off controls, is near you to switch off the power, if necessary.
  - Use only one hand when working with powered-on electrical equipment; keep the other hand in your pocket or behind your back.

  **Attention:** An electrical shock can occur only when there is a complete circuit. By observing the above rule, you can prevent a current from passing through your body.

  - When using testers, set the controls correctly and use the approved probe leads and accessories for that tester.
  - Stand on suitable rubber mats (obtained locally, if necessary) to insulate you from grounds such as metal floor strips and machine frames.

- Observe the special safety precautions when you work with very high voltages; Instructions for these precautions are in the safety sections of maintenance information. Use extreme care when measuring high voltages.

- Regularly inspect and maintain your electrical hand tools for safe operational condition.

- Do not use worn or broken tools and testers.

- Never assume that power has been disconnected from a circuit. First, check that it has been powered off.

- Always look carefully for possible hazards in your work area. Examples of these hazards are moist floors, nongrounded power extension cables, power surges, and missing safety grounds.

- Do not touch live electrical circuits with the reflective surface of a plastic dental mirror. The surface is conductive; such touching can cause personal injury and machine damage.

- Do not service the following parts with the power on when they are removed from their normal operating places in a machine:
  - Power supply units
  - Pumps
  - Blowers and fans
  - Motor generators
  - Similar units to listed above

  This practice ensures correct grounding of the units.

- If an electrical accident occurs:
– Use caution; do not become a victim yourself.
– Switch off power.
– Send another person to get medical aid.

Safety inspection guide
The purpose of this inspection guide is to assist you in identifying potentially unsafe conditions. As each machine was designed and built, required safety items were installed to protect users and service technicians from injury. This guide addresses only those items. You should use good judgment to identify potential safety hazards due to attachment of non-ThinkPad features or options not covered by this inspection guide.

If any unsafe conditions are present, you must determine how serious the apparent hazard could be and whether you can continue without first correcting the problem.

Consider these conditions and the safety hazards they present:

• Electrical hazards, especially primary power (primary voltage on the frame can cause serious or fatal electrical shock)
• Explosive hazards, such as a damaged CRT face or a bulging capacitor
• Mechanical hazards, such as loose or missing hardware

To determine whether there are any potentially unsafe conditions, use the following checklist at the beginning of every service task. Begin the checks with the power off, and the power cord disconnected.

Checklist:
1. Check exterior covers for damage (loose, broken, or sharp edges).
2. Power off the computer. Disconnect the power cord.
3. Check the power cord for:
   a. A third-wire ground connector in good condition. Use a meter to measure third-wire ground continuity for 0.1 ohm or less between the external ground pin and the frame ground.
   b. The power cord should be the authorized type specified for your computer. Go to: http://www.lenovo.com/serviceparts-lookup.
   c. Insulation must not be frayed or worn.
4. Check for cracked or bulging batteries.
5. Remove the cover.
6. Check for any obvious non-ThinkPad alterations. Use good judgment as to the safety of any non-ThinkPad alterations.
7. Check inside the unit for any obvious unsafe conditions, such as metal filings, contamination, water or other liquids, or signs of fire or smoke damage.
8. Check for worn, frayed, or pinched cables.
9. Check that the power-supply cover fasteners (screws or rivets) have not been removed or tampered with.

Handling devices that are sensitive to electrostatic discharge
Any computer part containing transistors or integrated circuits (ICs) should be considered sensitive to electrostatic discharge (ESD). ESD damage can occur when there is a difference in charge between objects. Protect against ESD damage by equalizing the charge so that the machine, the part, the work mat, and the person handling the part are all at the same charge.

Notes:
1. Use product-specific ESD procedures when they exceed the requirements noted here.
2. Ensure that the ESD protective devices you use have been certified (ISO 9000) as fully effective.

When handling ESD-sensitive parts:
- Keep the parts in protective packages until they are inserted into the product.
- Avoid contact with other people.
- Wear a grounded wrist strap against your skin to eliminate static on your body.
- Prevent the part from touching your clothing. Most clothing is insulative and retains a charge even when you are wearing a wrist strap.
- Use a grounded work mat to provide a static-free work surface. The mat is especially useful when handling ESD-sensitive devices.
- Select a grounding system, such as those listed below, to provide protection that meets the specific service requirement.

**Note:** The use of a grounding system to guard against ESD damage is desirable but not necessary.
- Attach the ESD ground clip to any frame ground, ground braid, or green-wire ground.
- When working on a double-insulated or battery-operated system, use an ESD common ground or reference point. You can use coax or connector-outside shells on these systems.
- Use the round ground prong of the ac plug on ac-operated computers.

---

**Grounding requirements**

Electrical grounding of the computer is required for operator safety and correct system function. Proper grounding of the electrical outlet can be verified by a certified electrician.

**Safety notices (multilingual translations)**

The safety notices in this section are provided in the following languages:
- English
- Arabic
- Brazilian Portuguese
- French
- German
- Hebrew
- Japanese
- Korean
- Spanish
- Traditional Chinese

---

**DANGER**

Before the computer is powered on after FRU replacement, make sure that all screws, springs, and other small parts are in place and are not left loose inside the computer. Verify this by shaking the computer and listening for rattling sounds. Metallic parts or metal flakes can cause electrical short circuits.
DANGER

Some standby batteries contain a small amount of nickel and cadmium. Do not disassemble a standby battery, recharge it, throw it into fire or water, or short-circuit it. Dispose of the battery as required by local ordinances or regulations. Use only the battery in the appropriate parts listing. Use of an incorrect battery can result in ignition or explosion of the battery.

DANGER

The battery pack contains small amounts of nickel. Do not disassemble it, throw it into fire or water, or short-circuit it. Dispose of the battery pack as required by local ordinances or regulations. Use only the battery in the appropriate parts listing when replacing the battery pack. Use of an incorrect battery can result in ignition or explosion of the battery.

DANGER

The lithium battery can cause a fire, an explosion, or a severe burn. Do not recharge it, remove its polarized connector, disassemble it, heat it above 100°C (212°F), incinerate it, or expose its cell contents to water. Dispose of the battery as required by local ordinances or regulations. Use only the battery in the appropriate parts listing. Use of an incorrect battery can result in ignition or explosion of the battery.

DANGER

If the LCD breaks and the fluid from inside the LCD gets into your eyes or on your hands, immediately wash the affected areas with water for at least 15 minutes. Seek medical care if any symptoms from the fluid are present after washing.

DANGER

To avoid shock, do not remove the plastic cover that protects the lower part of the inverter card.

DANGER

Though the main batteries have low voltage, a short-circuited or grounded battery can produce enough current to burn personnel or combustible materials.
DANGER

Unless hot swap is allowed for the FRU being replaced, do as follows before removing it: power off the computer, unplug all power cords from electrical outlets, remove the battery pack, and disconnect any interconnecting cables.

DANGER

Before attempting to turn on the device after removing FRU, make sure that the following conditions have been met:

- All components and boards have been properly reassembled.
- All screws and connectors have been tightened.
- All cables have been reconnected.

DANGER

Do not attempt to remove or replace any internal components unless you are an authorized service technician.

DANGER

Do not attempt to modify or repair any internal components unless you are an authorized service technician.

DANGER

Do not attempt to clean any internal components unless you are an authorized service technician.

DANGER

Do not attempt to adjust any internal components unless you are an authorized service technician.

DANGER

Do not attempt to service any internal components unless you are an authorized service technician.
Chapter 1. Safety information

¡Peligro! Si se daña la batería de litio, puede que se produzca un incendio, una explosión o un Provider. No la arroje al fuego ni la deshaga en un horno de microondas. No la sumerja en líquidos, ni la golpee o la someta a una presión excesiva. No intente repararla ni desmontarla. No la exponga a temperaturas superiores a 100 °C (212 °F, punto de ebullición del agua). No la exponga a fuego o lámparas incandescentes. No deje que fluya con altas temperaturas. No la utilice junto a dispositivos que emitan radiación. No la utilice en atmósferas con gases inflamables. No la utilice en atmósferas con gases inflamables. No la utilice en atmósferas con gases inflamables. No la utilice en atmósferas con gases inflamables. No la utilice en atmósferas con gases inflamables.

PERIGO

Antes de ligar o computador após a substituição da FRU, certifique-se de que todos os parafusos, molas e outras peças pequenas estejam no lugar e não estejam soltos dentro do computador. Verifique isso sacudindo o computador e procurando ouvir sons de peças soltas. Peças metálicas ou lascas de metal podem causar curto-circuito.

PERIGO

PERIGO

PERIGO

A bateria de lítio pode causar incêndio, explosão ou graves queimaduras. Não a recarregue, remova seu conector polarizado, desmonte-a, aqueça-a acima de 100°C (212°F), incinere-a, ou exponha o conteúdo de sua célula à água. Descarte a bateria conforme requerido pelas leis ou regulamentos locais. Use somente a bateria nas partes listadas apropriadas. O uso de uma bateria incorreta pode resultar em combustão ou explosão da bateria.

PERIGO

Se o LCD quebrar e o fluido de dentro dele entrar em contato com seus olhos ou com suas mãos, lave as áreas afetadas imediatamente com água durante pelo menos 15 minutos. Procure cuidados médicos se algum sintoma causado pelo fluido surgir após a lavagem.

PERIGO
Para evitar choque elétrico, não remova a capa plástica que protege a parte inferior da placa inversora.

**PERIGO**

Embora as principais baterias possuam baixa voltagem, uma bateria em curto-circuito ou aterrada pode produzir corrente o bastante para queimar materiais de pessoal ou inflamáveis.

**PERIGO**

A menos que uma hot swap seja permitida para a FRU que está sendo substituída, faça o seguinte antes de removê-la: desligue o computador, desconecte todos os cabos de energia das tomadas, remova o pacote de baterias e desconecte quaisquer cabos de interconexão.

**DANGER**

Avant de remettre l'ordinateur sous tension après remplacement d'une unité en clientèle, vérifiez que tous les ressorts, vis et autres pièces sont bien en place et bien fixées. Pour ce faire, secouez l'unité et assurez-vous qu'aucun bruit suspect ne se produit. Des pièces métalliques ou des copeaux de métal pourraient causer un court-circuit.

**DANGER**

Certaines batteries de secours contiennent du nickel et du cadmium. Ne les démontez pas, ne les rechargez pas, ne les exposez ni au feu ni à l’eau. Ne les mettez pas en court-circuit. Pour les mettre au rebut, conformez-vous à la réglementation en vigueur. Lorsque vous remplacez la pile de sauvegarde ou celle de l’horloge temps réel, veillez à n’utiliser que les modèles cités dans la liste de pièces détachées adéquate. Une batterie ou une pile inappropriée risque de prendre feu ou d’exploser.

**DANGER**

La batterie contient du nickel. Ne la démontez pas, ne l’exposez ni au feu ni à l’eau. Ne la mettez pas en court-circuit. Pour la mettre au rebut, conformez-vous à la réglementation en vigueur. Lorsque vous remplacez la batterie, veillez à n’utiliser que les modèles cités dans la liste de pièces détachées adéquate. En effet, une batterie inappropriée risque de prendre feu ou d’exploser.
**DANGER**

La pile de sauvegarde contient du lithium. Elle présente des risques d'incendie, d'explosion ou de brûlures graves. Ne la rechargez pas, ne retirez pas son connecteur polarisé et ne la démontez pas. Ne l'exposez pas à une température supérieure à 100°C, ne la faites pas brûler et n'en exposez pas le contenu à l'eau. Mettez la pile au rebut conformément à la réglementation en vigueur. Une pile inappropriée risque de prendre feu ou d’exploser.

**DANGER**

Si le panneau d'affichage à cristaux liquides se brise et que vous recevez dans les yeux ou sur les mains une partie du fluide, rincez-les abondamment pendant au moins quinze minutes. Consultez un médecin si des symptômes persistent après le lavage.

**DANGER**

Afin d'éviter tout risque de choc électrique, ne retirez pas le cache en plastique protégeant la partie inférieure de la carte d'alimentation.

**DANGER**

Bien que le voltage des batteries principales soit peu élevé, le court-circuit ou la mise à la masse d'une batterie peut produire suffisamment de courant pour brûler des matériaux combustibles ou causer des brûlures corporelles graves.

**DANGER**

Si le remplacement à chaud n'est pas autorisé pour l'unité remplaçable sur site que vous remplacez, procédez comme suit avant de retirer l'unité : mettez l'ordinateur hors tension, débranchez tous les cordons d'alimentation des prises de courant, retirez le bloc de batterie et déconnectez tous les câbles d'interconnexion.

**VORSICHT**

**VORSICHT**

**VORSICHT**

**VORSICHT**

**VORSICHT**

VORSICHT

Aus Sicherheitsgründen die Kunststoffabdeckung, die den unteren Teil der Spannungswandlerplatine umgibt, nicht entfernen.

VORSICHT

Obwohl Hauptbatterien eine niedrige Spannung haben, können sie doch bei Kurzschluß oder Erdung genug Strom abgeben, um brennbare Materialien zu entzünden oder Verletzungen bei Personen hervorzurufen.

VORSICHT

Wenn ein Austausch der FRU bei laufendem Betrieb nicht erlaubt ist, gehen Sie beim Austausch der FRU wie folgt vor: Schalten Sie den Computer aus, ziehen Sie alle Netzkabel von den Netzsteckdosen ab, entfernen Sie den Akku und ziehen Sie alle miteinander verbundenen Kabel ab.

**Warning**

Never feed power back into the FRU, even if the FRU is not plugged into the computer. Do not connect or disconnect power to or from the FRU while the computer is turned on.

**Warning**

Never connect or disconnect power to or from the FRU while the computer is turned on.

**Warning**

Never connect or disconnect power to or from the FRU while the computer is turned on.

**Warning**

Never connect or disconnect power to or from the FRU while the computer is turned on.

**Warning**

Never connect or disconnect power to or from the FRU while the computer is turned on.

**Warning**

Never connect or disconnect power to or from the FRU while the computer is turned on.

**Warning**

Never connect or disconnect power to or from the FRU while the computer is turned on.

**Warning**

Never connect or disconnect power to or from the FRU while the computer is turned on.

**Warning**

Never connect or disconnect power to or from the FRU while the computer is turned on.

**Warning**

Never connect or disconnect power to or from the FRU while the computer is turned on.

**Warning**

Never connect or disconnect power to or from the FRU while the computer is turned on.

**Warning**

Never connect or disconnect power to or from the FRU while the computer is turned on.
注意

ソリッドステートドライブ（SSD）を装着または取り外す場合は、電源がオフになっていることを確認してください。

警告

取り付け面の取り付けまたは取り外しが不適切である場合、システムがシャットダウンする場合があります。システムの接続状態を確認し、接続が正しくない場合は、システムの電源をオフにし、システムを再起動してください。

警告

FRUの取り付けや交換、またはシステムの修理を手伝う場合、またはフロントパネルの取り付けまたは取り外しを行う場合、以下の手順に従ってください。

1. 電源をオフにし、システムをシャットダウンしてください。
2. システムの電源コードを抜いてください。
3. システムのカバーを開けてください。
4. 内部のコンポーネントを触らないでください。
5. フロントパネルの取り付けまたは取り外しを行なった後は、システムのカバーを閉めてください。

警告

FRUの交換後、システムの電源を再起動する前に、システムの接続状態を確認してください。システムの電源をオフにし、システムを再起動してください。

注意

システムの内部部品の取り扱いに際しては、手荒れを避けてください。システムの内部部品はクリーニング用の布で清掃してください。

バッテリー・パックの廃棄にあたっては、地方自治体の条例または規則に従って
ください。バッテリー・パックを交換するときは、適切なパーツ・リストにある
バッテリーだけを使用してください。誤ったバッテリーを使用すると、バッテ
リーが発火したり、爆発したりすることがあります。

危険

リチウム・バッテリーは、火災、爆発、または重症のやけどを引き起こすことが
あります。バックアップ・バッテリーの充電、その極性コネクターの取り外し、
バッテリー本体の分解、100 ℃ (212 ℉) 以上への加熱、焼却、電池の中身を水に浸すことはしないでください。
バッテリーを廃棄する場合は地方自治体の条例に従ってください。適切な
パーツ・リストにあるバッテリーだけを使用してください。誤ったバッテリーを
使用すると、バッテリーが発火したり、爆発したりすることがあります。

危険

LCD が破損し、LCD の中の液体が目に入ったり、手に触れたりした場合は、液
体が触れた部分を少なくとも 15 分間洗い流してください。洗い流した後に、液体
によって何らかの症状が現れた場合は、医師の治療を受けてください。

危険

感電を防ぐため、インバーター・カードの下部を保護しているプラスチック・カ
バーを外さないでください。

危険

メイン・バッテリーの電圧が低くても、ショートしたり、接地したバッテ
リーが、作業者にやけどを負わせたり、可燃物を燃やすだけの電流を発生さ
せる場合があります。
危険

交換しようとしている FRU がホット・スワップに対応していない場合、それを取り外す前に、コンピュータの電源をオフにし、すべての電源コードをコンセントから抜き、バッテリー・パックを取り外して、相互接続しているケーブルをすべて切り離してください。

注意

FRUを交換する前に、コンピューターを電源供給コンセントから外して、コンピューター内部のレプリカを安全に取り扱うために使用する専用の工具を使用してください。コンピューターを組み立てる際は、手の指を挟まないように注意してください。

注意

別のバッテリーは、同じタイプのバッテリーと互換性があります。異なるバッテリーを使用すると、コンピューターの性能が低下することがあります。コンピューター、バッテリー、および充電器は、互換性のある製品を使用してください。

注意

リチウム・ポリマーバッテリーは、過熱し、爆発する可能性があります。リチウム・ポリマーバッテリーは、点火しないでください。バッテリーパックを熱にさらさないでください。リチウム・ポリマーバッテリーは、不適切な保存や使いづらい場合、爆発または火災の原因となります。バッテリーを熱にさらしたり、破壊したり、過熱させたりしないでください。

注意

リチウム・ポリマーバッテリーを処理する際は、リチウム・ポリマーバッテリーを処理する際は、有害な廃棄物として処理していただきます。リチウム・ポリマーバッテリーは、絶対に火災や爆発の原因となります。リチウム・ポリマーバッテリーを破壊したり、過熱させたりしないでください。
LCD가 파손되어 LCD 내부의 액체가 눈에 들어가거나 손에 묻으면 즉시 깨끗한 물로 15분 이상 닦아 내십시오. 향은 후에 조금이라도 이상을 느낄면 즉시 병원에 가서 의사의 진찰을 받아야 합니다.

⚠️ 위험

전기적 위험을 방지하려면 인버터 카드의 아래 부분을 보호하는 플라스틱 덮개를 제거하지 마십시오.

⚠️ 위험

기본 배터리의 전압은 낮지만, 단락되거나 접지된 배터리는 화상을 입하기에 충분한 전류와 가연성 물질을 발생시킬 수 있습니다.

⚠️ 위험

FRU 교체시 Hot Swap이 지원되지 않는 경우, FRU를 제거하기 전에 컴퓨터의 전원을 끄고, 전기 콘센트에서 전원 코드를 분리하고, 배터리를 제거한 후, 연결된 모든 케이블을 분리하십시오.

⚠️ PELIGRO

Antes de encender el sistema después de sustituir una FRU, compruebe que todos los tornillos, muelles y demás piezas pequeñas se encuentran en su sitio y no se encuentran sueltas dentro del sistema. Compruébelo agitando el sistema y escuchando los posibles ruidos que provocarían. Las piezas metálicas pueden causar cortocircuitos eléctricos.

⚠️ PELIGRO

Algunas baterías de reserva contienen una pequeña cantidad de níquel y cadmio. No las desmonte, ni recargue, ni las eche al fuego o al agua ni las cortocircuite.Deséchelas tal como dispone la normativa local. Utilice sólo baterías que se encuentren en la lista de piezas. La utilización de una batería no apropiada puede provocar la ignición o explosión de la misma.

⚠️ PELIGRO

Las baterías contienen pequeñas cantidades de níquel. No las desmonte, ni recargue, ni las eche al fuego o al agua ni las cortocircuite. Deséchelas tal como dispone la normativa local. Utilice sólo baterías que se encuentren en la lista de piezas al sustituir la batería. La utilización de una batería no apropiada puede provocar la ignición o explosión de la misma.
¡PELIGRO!

La batería de repuesto es una batería de litio y puede provocar incendios, explosiones o quemaduras graves. No la recargue, ni quite el conector polarizado, ni la desmonte, ni caliente por encima de los 100°C (212°F), ni la incinere ni exponga el contenido de sus celdas al agua. Deséchela tal como dispone la normativa local.

¡PELIGRO!

Si la LCD se rompe y el fluido de su interior entra en contacto con sus ojos o sus manos, lave inmediatamente las áreas afectadas con agua durante 15 minutos como mínimo. Obtenga atención médica si se presenta algún síntoma del fluido después de lavarse.

¡PELIGRO!

Para evitar descargas, no quite la cubierta de plástico que rodea la parte baja de la tarjeta invertida.

¡PELIGRO!

Aunque las baterías principales tienen un voltaje bajo, una batería cortocircuitada o con contacto a tierra puede producir la corriente suficiente como para quemar material combustible o provocar quemaduras en el personal.

¡PELIGRO!

Salvo que se permita el intercambio en caliente para la unidad sustituible localmente, realice lo siguiente antes de extraerla: apague el sistema, desconecte todos los cables de alimentación de las tomas de alimentación eléctrica, extraiga la batería y desconecte los cables de interconexión.

¡JUEGO!

完成 FRU 更換之後，在開啟電腦的電源之前，請確定所有螺絲、彈簧及其他小零件都已歸位，沒有遺留在電腦內部。
若要確認這一點，請搖晃電腦，聽聽看是否有卡嗒的聲響。
金屬零件或儀錶的火花會造成電線短路。

¡JUEGO!
部分備用電池含有微量的鎳和銅。請勿拆開備用電池、再充電、丟入火或水中，或使其形成短路。請按照當地法令或規定來棄置電池。
僅限使用零件清單中的電池。使用不適當的電池會導致電池起火或爆炸。

⚠️ 危險

電池套件含有微量的鎳。請勿拆開電池套件、丟入火或水中，或使其形成短路。請按照當地法令或規定來棄置電池套件。

更換電池套件時，僅限使用零件清單中的電池。使用不適當的電池會導致電池起火或爆炸。

⚠️ 危險

鋰電池會導致起火、爆炸或嚴重燒傷。請勿再充電、拔除其電極接頭、拆開、加熱超過 100°C (212°F)、焚燒，或讓電池組成物浸到水。請按照當地法令或規定來棄置電池。
僅限使用零件清單中的電池。使用不適當的電池會導致電池起火或爆炸。

⚠️ 危險

如果 LCD 破裂導致 LCD 流出的液體沾到您的眼睛或手，請立即以清水沖洗沾染部位至少 15 分鐘。如果在清洗後出現該液體所造成的任何症狀，請就醫治療。

⚠️ 危險

為避免電擊，請勿拆下轉換卡下面的塑膠護蓋。

⚠️ 危險

雖然主電池的電壓很低，但短路或接地電池所產生的電流，仍足以使人燒傷或使可燃物質起火。

⚠️ 危險
除非 FRU 允許以熱抽換來替換，否則請依下列方式將其移除：將電腦關機，拔除插座上所有電源線，移除電池包，並拔開任何交互連接的線材。
Chapter 2. Important service information

This chapter presents following important service information that applies to all machine types supported by this manual:

- “Strategy for replacing FRUs” on page 21
  - “Strategy for replacing a hard disk drive” on page 22
  - “Important notice for replacing a system board” on page 22
  - “How to use error message” on page 22
- “Strategy for replacing FRUs for CTO, CMV, and GAV” on page 22
  - “Product definition” on page 22
  - “FRU identification for CTO, CMV, and GAV products” on page 23

Important:
- If the computer is equipped with both a hard disk drive and an mSATA solid-state drive, do not use the mSATA solid-state drive as a bootable device. The mSATA solid-state drive is used for “cache” function only.
- Advise customers to contact the Lenovo Customer Support Center if they need any assistance in obtaining or installing any software fixes, drivers, and UEFI BIOS downloads. Telephone numbers for Lenovo Support are available at: http://www.lenovo.com/support/phone
- System Disassembly/Reassembly videos that show the FRU removals or replacements for the Lenovo® authorized service technicians are available in the following support site: http://www.lenovoservicetraining.com/ion/

Strategy for replacing FRUs

Before replacing parts:
Ensure that all software fixes, drivers, and UEFI BIOS downloads are installed before replacing any FRUs listed in this manual.

After a system board is replaced, ensure that the latest UEFI BIOS is loaded to the system board before completing the service action.

To download software fixes, drivers, and UEFI BIOS, do the following:
2. Enter the product number of the computer or press the Run Auto-Detect button on the screen.
3. Select Drivers & Software.
4. Follow the directions on the screen and install the necessary software.

Use the following strategy to prevent unnecessary expense for replacing and servicing FRUs:
- If you are instructed to replace a FRU but the replacement does not correct the problem, reinstall the original FRU before you continue.
- Some computers have both a processor board and a system board. If you are instructed to replace either the processor board or the system board, and replacing one of them does not correct the problem, reinstall that board, and then replace the other one.
• If an adapter or a device consists of more than one FRU, any of the FRUs might be the cause of the error. Before replacing the adapter or device, remove the FRUs, one by one, to see if the symptoms change. Replace only the FRU that changed the symptoms.

**Attention:** The setup configuration on the computer you are servicing might have been customized. Running Automatic Configuration might alter the settings. Note the current configuration settings (using the View Configuration option); then, when service has been completed, verify that those settings remain in effect.

**Strategy for replacing a hard disk drive**

Always try to run a low-level format before replacing a hard disk drive. This will cause all customer data on the hard disk to be lost. Be sure that the customer has a current backup of the data before doing this task.

**Attention:** The drive startup sequence in the computer you are servicing might have been changed. Be extremely careful during write operations such as copying, saving, or formatting. If you select an incorrect drive, data or programs can be overwritten.

If the computer is shipped with both an mSATA solid-state drive and a hard disk drive, the mSATA solid-state drive is used for the “cache” function and to support the Intel® Rapid Start Technology. We recommend that users do not replace the mSATA solid-state drive by themselves. Otherwise, the “cache” function will not work and the Intel Rapid Start Technology cannot be used any more.

**Attention:** Ensure that you partition the mSATA solid-state drive after installing it on the computer you are servicing. Otherwise, the mSATA solid-state drive will not function correctly. For instructions on how to partition an mSATA solid-state drive, go to http://www.lenovo.com/support/msata-fru.

**Important notice for replacing a system board**

Some components mounted on the system board are very sensitive. Improper handling of the system board can cause damage to those components, and might cause the system malfunction.

**Attention:** When handling a system board:

• Do not drop the system board or apply any excessive force to it.
• Avoid rough handling of any kind.
• Avoid bending the system board or pushing it hard to prevent cracking at each Ball Grid Array (BGA) chipset.

**How to use error message**

Use the error codes displayed on the screen to diagnose failures. If more than one error code is displayed, begin the diagnosis with the first error code. Whatever causes the first error code might also cause false error codes. If no error code is displayed, see whether the error symptom is listed in the Symptom-to-FRU Index for the computer you are servicing.

**Strategy for replacing FRUs for CTO, CMV, and GAV**

**Product definition**

**Dynamic Configure To Order (CTO)**

This provides the ability for a customer to configure a Lenovo solution from an eSite, and have this configuration sent to fulfillment, where it is built and shipped directly to the customer. The machine label, Product Entitlement Warehouse (PEW), and eSupport will load these products as the 4-digit MT and 3-digit model, where model = "CTO" (Example: 1829-CTO).
Custom Model Variant (CMV)

This is a unique configuration that has been negotiated between Lenovo and the customer. A unique 4-digit MT and 3-digit model is provided to the customer to place orders (Example: 1829-W15). A CMV is a special bid offering. Therefore, it is NOT generally announced.

- The MTM portion of the machine label is the 4-digit MT and 3-digit model, where model = “CTO” (Example: 1829-CTO). The PRODUCT ID portion of the machine label is the 4-digit MT and 3-digit CMV model (Example: 1829-W15).
- The PEW record is the 4-digit MT and 3-digit model, where model = “CTO” (Example: 1829-CTO).
- eSupport will show both the CTO and CMV machine type models (Example: 1829-CTO and 1829-W15 will be found on the eSupport site.)

General Announce Variant (GAV)

This is a standard model (fixed configuration). GAVs are announced and offered to all customers. The MTM portion of the machine label is a 4-digit MT and 3-digit model, where model = a “fixed part number”, not “CTO” (Example: 1829-F1U). Also, PEW, and eSupport will list these products under the same fixed model number.

FRU identification for CTO, CMV, and GAV products

There are three information resources to identify which FRUs are used to support CTO, CMV, and GAV products. These sources are PEW and eSupport.

Using PEW

- **PEW** is the primary source for identifying FRU part numbers and FRU descriptions for the key commodities for CTO, CMV and GAV products at a MT - serial number level. An example of key commodities are hard disk drives, system boards, microprocessors, Liquid Crystal Displays (LCDs), and memory.
- Remember, all CTO and CMV products are loaded in PEW under the 4-digit MT and 3-digit model, where model = “CTO” (Example: 1829-CTO). GAVs are loaded in PEW under the 4-digit MT and 3-digit model, where model = a “fixed part number”, not “CTO” (Example: 1829-F1U).
- PEW can be accessed at the following Web site:
  

  Select Warranty lookup. Input the MT and the Serial number and the list of key commodities will be returned in the PEW record under COMPONENT INFORMATION.

Using eSupport

For key commodities (examples - hard disk drive, system board, microprocessor, LCD, and memory)

- eSupport can be used to view the list of key commodities built in a particular machine serial (this is the same record found in PEW).
- eSupport can be accessed at the following Web site:
  
  http://www.lenovo.com/support

- To view the key commodities, do the following:
  1. Click **Warranty**.
  2. Click **Check Warranty Status**.
  3. On the Warranty Status Lookup page, click **Parts Lookup**.
  4. Type your machine type and serial number, and then click **Submit**. The key commodities will be displayed.

For the remaining FRUs (the complete list of FRUs at the MT model level)

- eSupport can be used to view the complete list of FRUs for a machine type and model.
To view the complete list of FRUs, do the following:

1. Click **Product & Parts Detail** and then follow the instructions on the screen to reach the Product and Parts Details page.

2. Click the **Parts Detail** tab to view the list of service parts.
Chapter 3. General checkout

This chapter presents the following information:

- “What to do first” on page 25
- “Checkout guide” on page 26
  - “Lenovo Solution Center” on page 26
  - “Quick test programs” on page 26
  - “UEFI diagnostic program” on page 27
  - “Bootable diagnostic programs” on page 27
- “Power system checkout” on page 28

Some descriptions in this chapter might not apply to your particular computer. Before you go to the checkout guide, be sure to read the following important notes:

- **Only certified trained personnel should service the computer.**
- **Before replacing any FRU, read the entire page on removing and replacing FRUs.**
- **When you replace FRUs, it is recommended to use new nylon-coated screws.**
- **Be extremely careful during such write operations as copying, saving, or formatting.** The sequence of the drives in the computer that you are servicing might have been altered. If you select an incorrect drive, data or programs might be overwritten.
- **Replace a FRU only with another FRU of the correct model.** When you replace a FRU, ensure that the model of the machine and the FRU part number are correct.
- **A FRU should not be replaced because of a single, unreproducible failure.** Single failures can occur for a variety of reasons that have nothing to do with a hardware defect, such as cosmic radiation, electrostatic discharge, or software errors. Consider replacing a FRU only when a problem recurs. If you suspect that a FRU is defective, clear the error log and run the test again. If the error does not recur, do not replace the FRU.
- **Be careful not to replace a nondefective FRU.**

What to do first

When you do return a FRU, you must include the following information in the parts exchange form or parts return form that you attach to it:

1. Name and phone number of service technician
2. Date of service
3. Date on which the machine failed
4. Date of purchase
5. Failure symptoms, error codes appearing on the display, and beep symptoms
6. Procedure index and page number in which the failing FRU was detected
7. Failing FRU name and part number
8. Machine type, model number, and serial number
9. Customer's name and address

**Note:** During the warranty period, the customer is responsible for repair costs if the computer damage was caused by misuse, accident, modification, unsuitable physical or operating environment, or improper maintenance by the customer. Following is a list of some common items that are not covered under warranty and some symptoms indicates that the system has been subjected to stress beyond normal use.

Before checking problems with the computer, determine whether the damage is covered under the warranty by referring to the following list:

**The following are not covered under warranty:**
• LCD panel cracked from the application of excessive force or from being dropped
• Scratched (cosmetic) parts
• Distortion, deformation, or discoloration of the cosmetic parts
• Plastic parts, latches, pins, or connectors that have been cracked or broken by excessive force
• Damage caused by liquid spilled into the system
• Damage caused by the improper insertion of a PC Card or the installation of an incompatible card
• Diskette drive damage caused by pressure on the diskette drive cover, foreign material in the drive, or the insertion of a diskette with multiple labels
• Damaged or bent diskette eject button
• Fuses blown by attachment of a nonsupported device
• Forgotten computer password (making the computer unusable)
• Sticky keys caused by spilling a liquid onto the keyboard
• Use of an incorrect ac power adapter on laptop products

The following symptoms might indicate damage caused by nonwarranted activities:
• Missing parts might be a symptom of unauthorized service or modification.
• If the spindle of a hard disk drive becomes noisy, it might have been subjected to excessive force, or have been dropped.

Checkout guide

Note: The diagnostic tests are intended to test only ThinkPad products. The use of non-ThinkPad products, prototype cards, or modified options can lead to false indications of errors and invalid system responses.

Use the following procedures as a guide in identifying and correcting problems with the ThinkPad notebook computer.

1. Identify the failing symptoms in as much detail as possible.
2. Verify the symptoms. Try to re-create the failure by running the diagnostic test or by repeating the operation.

Lenovo Solution Center

The Lenovo Solution Center program enables you to troubleshoot and resolve computer problems. It combines diagnostic tests, system information collection, security status, and support information, along with hints and tips for maximum system performance.

The Lenovo Solution Center program is available for download at http://www.lenovo.com/diags.

To run the Lenovo Solution Center program, go to Control Panel and click System and Security → Lenovo - System Health and Diagnostics, and then follow the instructions on the screen.

For more information about the Lenovo Solution Center program, refer to the help information system of the program.

Quick test programs

You can run quick test programs to troubleshoot and resolve computer problems, especially when the computer does not have the Lenovo Solution Center program installed.

Lenovo provides the following quick test programs:

• Lenovo Hard Drive Quick Test: Use this program to troubleshoot and resolve internal storage problems.
• Lenovo Memory Quick Test: Use this program to troubleshoot and resolve memory module problems.

The quick test programs are applicable on the following operating systems:
• Microsoft® Windows® 8
• Microsoft Windows 7
• Microsoft Windows XP
• Microsoft Windows Server® 2003
• Microsoft Windows Server 2008

To download and install a quick test program, go to http://www.lenovo.com/diags and follow the instructions on the Web site.

To run a test using a quick test program, do the following:
1. Go to the C:\SWTOOLS\diag directory.
2. Double-click the gui_lsc_lite.exe file.
3. When the User Account Control window opens, click Yes.
4. Select the device class to be tested.
5. Select the devices to be tested.
6. Select the test to be performed.
7. Follow the instructions on the screen to start the test. When a problem is detected, information messages are displayed. Refer to the messages to troubleshoot the problem.

UEFI diagnostic program

A UEFI diagnostic program is preinstalled on the computer. It enables you to test memory modules and internal storage devices, and check and recover bad sectors on internal storage devices.

To run the UEFI diagnostic program, do the following:
1. Turn on the computer. If the computer cannot be turned on, go to “Power system checkout” on page 28, and check the power sources. If an error code is displayed, go to “Symptom-to-FRU index” on page 36 for error code descriptions and troubleshooting hints.
2. When the ThinkPad logo is displayed, repeatedly press and release the F10 key. The main screen of the UEFI diagnostic program is displayed.
3. Follow the instructions on the screen to use the program.

<table>

</tr>
</tbody>
</table>

Table 1. Items on the main screen of the UEFI diagnostic program

Bootable diagnostic programs

If the computer you are servicing is not installed with the UEFI diagnostic program, you can download a bootable diagnostic program from the Lenovo Support Web site. The bootable diagnostic programs enable you to test computer memory and internal storage devices, view system information, and check and recover the internal storage devices. To use the bootable diagnostic programs, you can create a bootable diagnostic medium on a USB device or CD.

To create a bootable diagnostic medium, do the following:
2. Click Lenovo Bootable Diagnostics.
3. Follow the instructions on the Web site to create a bootable diagnostic medium on a USB device or CD.

To use the diagnostic medium you have created, do one of the following:

- If you have created the bootable diagnostic medium on a USB device, do the following:
  1. Attach the USB device to the computer.
  2. Turn on the computer. If the computer cannot be turned on, go to “Power system checkout” on page 28, and check the power sources. If an error code is displayed, go to “Symptom-to-FRU index” on page 36 for error code descriptions and troubleshooting hints.
  3. When the ThinkPad logo is displayed, repeatedly press and release the F12 key. When the Boot Menu window opens, release the F12 key.
  4. Use the arrow keys to select **USB HDD** and then press Enter. The diagnostic program will be launched automatically.
  5. Follow the instructions on the screen to use the diagnostic program.

- If you have created the bootable diagnostic medium on a CD, do the following:
  1. Turn on the computer. If the computer cannot be turned on, go to “Power system checkout” on page 28, and check the power sources. If an error code is displayed, go to “Symptom-to-FRU index” on page 36 for error code descriptions and troubleshooting hints.
  2. Insert the CD into an external optical drive.
  3. Restart the computer.
  4. When the ThinkPad logo is displayed, repeatedly press and release the F12 key. When the Boot Menu window opens, release the F12 key.
  5. Use the arrow keys to select **ATAPI CDx** (x: 0, 1, ...) and then press Enter. The diagnostic program will be launched automatically.
  6. Follow the instructions on the screen to use the diagnostic program.

---

**Power system checkout**

To verify a symptom, do the following:

1. Connect the ac power adapter and turn on the computer.
2. Check that power is supplied when you turn on the computer.
3. Turn off the computer and disconnect the ac power adapter.
4. Check that the battery pack supplies power when you turn on the computer.

If you suspect a power problem, see the appropriate one of the following power supply checkouts:

- “Checking the ac power adapter” on page 28
- “Checking operational charging” on page 29
- “Checking the battery pack” on page 29
- “Checking the backup battery” on page 29

---

**Checking the ac power adapter**

You are here because the computer fails only when the ac power adapter is used.

- If the power-on indicator does not turn on, check the power cord of the ac power adapter for correct continuity and installation.
- If the computer does not charge during operation, go to “Checking operational charging” on page 29

To check the ac power adapter, do the following:

1. Unplug the ac power adapter cable from the computer.
2. Measure the output voltage at the plug of the ac power adapter cable. See the following figure:
Note: Output voltage across pin 2 of the AC power adapter might be different from the one you are servicing.
3. If the voltage is not correct, replace the AC power adapter.
4. If the voltage is acceptable, replace the system board.

Note: Noise from the AC power adapter does not always indicate a defect.

Checking operational charging
To check whether the battery charges properly during operation, use a discharged battery pack or a battery pack that has less than 50% of the total power remaining when installed in the computer.

Perform operational charging. If the battery status indicator or icon does not turn on, replace the battery pack.

If the charge indicator still does not turn on, replace the system board. Then reinstall the battery pack. If it is still not charged, go to the next section.

Checking the battery pack
The battery status icon in the Windows notification area displays the percentage of battery power remaining.

To check for detailed battery status information, do the following:
• For Windows 7: Open the Power Manager program and click the Battery tab.
• For Windows 8: Open the Lenovo Support program and click Battery Health, or open the Lenovo Settings program and click Power.

Checking the backup battery
To check the backup battery, do the following:
1. Disable the built-in battery. See “Disabling the battery pack in the UEFI BIOS” on page 58.
2. Remove the backup battery (see “1080 Backup battery” on page 71).
3. Measure the voltage of the backup battery. See the following figure.

<table>
<thead>
<tr>
<th>Wire</th>
<th>Voltage (V dc)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Red</td>
<td>+2.5 to +3.2</td>
</tr>
<tr>
<td>Black</td>
<td>Ground</td>
</tr>
</tbody>
</table>

• If the voltage is correct, replace the system board.
• If the voltage is not correct, replace the backup battery.
• If the backup battery discharges quickly after replacement, replace the system board.
Chapter 4. Related service information

This chapter presents the following information:
- “Restoring the factory contents by using Recovery Disc Set” on page 31
- “Using the Windows recovery programs on the Windows 8 operating system” on page 32
- “Passwords” on page 33
- “Power management” on page 35
- “Symptom-to-FRU index” on page 36

Service Web site:

When the latest maintenance diskette and the system program service diskette become available, they will be posted on http://www.lenovo.com/support.

Restoring the factory contents by using Recovery Disc Set

When the hard disk drive or solid-state drive is replaced because of a failure, no product recovery program is on the new drive. In this case, you must use the Recovery Disc Set for the computer. Order the Recovery Disc Set and the drive at the same time so that you can recover the new drive with the pre-installed software when they arrive. For information on which discs to order, go to http://www.lenovo.com/serviceparts-lookup.

The recovery disc set consists of the user instructions and the following set of DVDs to restore the computer to the original factory configuration.

Operating System Recovery Disc (one disc)

This disc restores the Microsoft® Windows operating system. Use this disc to start the recovery process.

Applications and Drivers Recovery Disc (one or more discs)

This disc restores the preinstalled applications and drivers on the computer.

Supplemental Recovery Disc

This disc contains additional content, such as updates to the software that was preinstalled on the computer. Not all recovery disc sets come with a Supplemental Recovery Disc.

Notes:
- You must have a DVD drive to use the recovery discs. If you do not have an internal DVD drive, you can use an external USB DVD drive.
- During the recovery process, all data on the drive will be deleted. If possible, copy any important data or personal files that you want to keep onto removable media or a network drive before you start the recovery process.

To restore the computer to the original factory configuration using the recovery disc set, do the following:

Note: Recovery takes several hours. The length of time depends on the method you use. If you use recovery discs, recovery takes at least five hours.

1. Make the CD/DVD drive the first startup device in the startup sequence using the following procedure:
   a. Turn on the computer. When the logo screen is displayed, press F1. The ThinkPad Setup program opens.

© Copyright Lenovo 2012, 2013
b. Use the arrow keys to select **Startup → Boot**.
c. Select the CD/DVD drive as the **1st Boot Device**.

2. Insert the *Operating System Recovery Disc* into the DVD drive.

3. Press F10 to save the ThinkPad Setup configuration changes. Follow the instructions on the screen to begin the recovery process.

4. Select your language and click **Next**.

5. Read the license. If you agree with the terms and conditions, select **I accept these terms and conditions** and then click **Next**. If you do not agree with the terms and conditions, follow the instructions on the screen.

6. Click **Yes** in the displayed window to begin the operating system recovery process.

7. Insert the *Applications and Drivers Recovery Disc* when prompted and then click **OK** to begin the applications and drivers recovery process.

8. If you have a *Supplemental Recovery Disc*, insert it when prompted and click **Yes**. If you do not have a *Supplemental Recovery Disc*, click **No**.

9. When all of the data has been copied from the last disk in the set and has been processed, remove the disc and restart the computer.

**Note:** The rest of the recovery process is fully automated and no action is required by you. The computer will restart into the Microsoft Windows desktop several times and you might experience periods when no activity is apparent on the screen for several minutes at a time. This is normal.

10. When the recovery process is complete, the Set Up Windows screen is displayed. Follow the instructions on the screen to complete the Windows setup.

11. After you have completed the Windows setup, you might want to restore the original startup sequence. Start the ThinkPad Setup and then press F9 to restore the default settings. Press F10 to save and exit the ThinkPad Setup.

**Note:** After restoring a drive to the factory default settings, you might need to reinstall some device drivers.

---

**Using the Windows recovery programs on the Windows 8 operating system**

The computer you are servicing might come with built-in recovery programs provided by the Windows 8 operating system. You can use those programs to refresh or restore the computer.

**Refreshing the computer**

If the computer you are servicing does not perform well and the problem might be caused by a recently installed program, you can refresh the computer without losing the customers' personal files or changing the settings.

**Attention:** If you refresh the computer, the programs that came with the computer and the programs that were installed from Windows Store will be reinstalled, but all other programs will be removed.

To refresh the computer, do the following:

1. Move your cursor to the bottom-right corner of the screen to bring up the charms. Click **Settings → Change PC settings → General**.

2. In the **Refresh your PC without affecting your files** section, click **Get started**.

**Resetting the computer to factory default settings**

You can reset the computer to the factory default settings. During the process, the operating system and all programs that are shipped with the computer will be reinstalled.
Attention: All the personal files and settings will be deleted after you reset the computer to the factory default settings. Ensure that the user has made a backup copy of all the data before resetting the computer to the factory default settings.

To reset your computer, do the following:
1. Move your cursor to the bottom-right corner of the screen to bring up the charms. Click Settings → Change PC settings → General.
2. In the Remove everything and reinstall Windows section, click Get started.

Advanced startup options
Advanced startup options enable you to change the startup settings of the Windows operating system, start the computer from an external device, or restore the Windows operating system from a system image.

To use the advanced startup options, do the following:
1. Move your cursor to the bottom-right corner of the screen to bring up the charms. Click Settings → Change PC settings → General.
2. In the Advanced startup section, click Restart now → Troubleshoot → Advanced options.
3. Restart the computer following the instructions on the screen.

For more details about the Windows recovery solutions, refer to the help information system of the Windows 8 operating system.

Passwords
As many as three passwords might be needed for any ThinkPad notebook computer: the power-on password (POP), the hard-disk password (HDP), and the supervisor password (SVP).

If any of these passwords has been set, a prompt for it appears on the screen whenever the computer is turned on. The computer does not start until the password is entered.

Exception: If only an SVP is set, the password prompt does not appear when the operating system is booted.

Power-on password
A power-on password (POP) protects the system from being powered on by an unauthorized person. The password must be entered before an operating system can be booted. For how to remove the POP, see “How to remove the power-on password” on page 34.

Hard-disk password
There are two kinds of hard-disk passwords (HDPs):

- User HDP—for the user
- Master HDP—for the system administrator, who can use it to get access to the hard disk even if the user has changed the user HDP

Note: There are two modes for the HDP: User only and Master + User. The Master + User mode requires two HDPs; the system administrator enters both in the same operation. The system administrator then provides the user HDP to the system user.

Attention: If the user HDP has been forgotten, check whether a master HDP has been set. If it has, it can be used for access to the hard disk drive. If no master HDP is available, neither Lenovo nor Lenovo authorized
service technicians can provide any services to reset either the user or the master HDP, or to recover data from the hard disk drive. The hard disk drive can be replaced for a scheduled fee.

For how to remove the POP, see “How to remove the hard-disk password” on page 34.

**Supervisor password**

A supervisor password (SVP) protects the system information stored in the ThinkPad Setup. The user must enter the SVP in order to get access to the ThinkPad Setup and change the system configuration.

**Attention:** If the SVP has been forgotten and cannot be made available to the service technician, there is no service procedure to reset the password. The system board must be replaced for a scheduled fee.

**How to remove the power-on password**

To remove a POP that you have forgotten, do the following:

(A) If no SVP has been set:
1. Disable the built-in battery. For how to disable the built in battery, see “Disabling the battery pack in the UEFI BIOS” on page 58.
2. Remove the backup battery. For how to remove the backup battery, see “1080 Backup battery” on page 71.
3. Connect the ac power adapter and turn on the computer. Wait until the POST ends. After the POST ends, the password prompt does not appear. The POP has been removed.
4. Disable the built-in battery and reinstall the backup battery.

(B) If an SVP has been set and is known by the service technician:
1. Turn on the computer.
2. When the ThinkPad logo comes up, immediately press F1.
3. Type in the supervisor password to enter the ThinkPad Setup program.
4. Select **Security**, using the cursor directional keys to move down the menu.
5. Select **Password**.
6. Select **Power-On Password**.
7. Type the current SVP in the **Enter Current Password** field. Then leave the **Enter New Password** field blank, and press Enter twice.
8. In the Changes have been saved window, press Enter.
9. Press F10; then, in the Setup Notice window, select **Yes**.

**How to remove the hard-disk password**

**Attention:** If **User only** mode is selected and the user HDP has been forgotten and cannot be made available to the service technician, neither Lenovo nor Lenovo authorized service technicians can provide any services to reset the user HDPs or to recover data from the hard disk drive. The hard disk drive can be replaced for a scheduled fee.

To remove a user HDP that has been forgotten, when the supervisor password and the master HDP are known, do the following:
1. Turn on the computer.
2. When the ThinkPad logo comes up, immediately press F1.
3. When the supervisor password icon is displayed on the screen, type in the supervisor password.
4. When the user HDP icon is displayed, press F1 to switch to master HDP mode. When the master HDP icon is displayed, type in the master HDP to enter ThinkPad Setup.
5. Select **Security**, using the cursor directional keys to move down the menu.
6. Select **Password**.
7. Select **Hard-disk x password**, where x is the letter of the hard disk drive. A pop-up window opens.
8. Select **Master HDP**.
9. Type the current master HDP in the **Enter Current Password** field. then leave the **Enter New Password** field blank, and press Enter twice.
10. Press F10 to save the changes and exit the ThinkPad Setup program.
11. Select **Yes** in the Setup Notice window. Both user HDP and master HDP will have been removed.

---

**Power management**

There are three power management modes to reduce power consumption: screen blank, sleep, and hibernation.

**Screen blank mode (for the Windows 7 operating system)**

1. Right-click the battery gauge in the task bar.
2. Select **Power off display (keep current power plan)**.

To end screen blank mode and resume normal operation, press any key.

**Sleep mode**

When the computer enters sleep mode, the following events occur in addition to what occurs in screen blank mode:
- The LCD is powered off.
- The hard disk drive is powered off.
- The microprocessor stops.

If a “suspend time” has been set on the timer, and the user does not do any operation with the keyboard, the TrackPoint®, the hard disk, the parallel connector, or the diskette drive within that time, the computer goes into sleep mode automatically:

**Note:** Even if you do not set the low-battery alarm, the charge indicator notifies you when the battery is low, and then the computer enters the power-saving mode automatically.

To cause the computer to return from sleep mode and resume operation, do one of the following:
- Press the Fn key.
- Open the LCD cover.
- Press the power button.

Also, in either of the following events, the computer automatically returns from sleep mode and resumes operation:
- The ring indicator (RI) is signaled by a serial device or a PC Card device.
- The time set on the resume timer elapses.

**Note:** The computer does not accept any input immediately after it enters sleep mode. Wait a few seconds before taking any action to reenter operation mode.

**Hibernation mode**

In hibernation mode, the following occurs:
• The system status, RAM, VRAM, and setup data are stored on the hard disk.
• The system is powered off.

If you have defined one of the following actions as the event that causes the system to go into hibernation mode, perform that action.
• Closing the lid.
• Pressing the power button.

Also, the computer goes into hibernation mode automatically after a period of inactivity specified in power plan settings.

When the power is turned on, the computer returns from hibernation mode and resumes operation. The hibernation file in the boot record on the hard disk drive is read, and system status is restored from the hard disk drive.

---

**Symptom-to-FRU index**

This section contains the following information:
• “Numeric error codes” on page 36
• “Error messages” on page 38
• “No-beep symptoms” on page 38
• “LCD-related symptoms” on page 38
• “Intermittent problems” on page 39
• “Undetermined problems” on page 39

The symptom-to-FRU index in this section lists symptoms and errors and their possible causes. The most likely cause is listed first, in boldface type.

**Note:** Do the FRU replacement or other actions in the sequence shown in the column headed “FRU or action, in sequence.” If replacing a FRU does not solve the problem, put the original part back in the computer. Do not replace a nondefective FRU.

This index can also help you determine, during regular servicing, what FRUs are likely to need to be replaced next.

A numeric error is displayed for each error detected in POST or system operation. In the displays, n can be any number.

If no numeric code is displayed, check the narrative descriptions of symptoms. If the symptom is not described there, go to “Intermittent problems” on page 39.

**Note:** For a device not supported by diagnostic codes in the ThinkPad notebook computers, see the manual for that device.

---

**Numeric error codes**

*Table 2. Numeric error codes*

<table>
<thead>
<tr>
<th>Symptom or error (beeps, if any)</th>
<th>FRU or action, in sequence</th>
</tr>
</thead>
<tbody>
<tr>
<td>0177</td>
<td>System board.</td>

</table>

## Beep symptoms

**Table 5. Beep symptoms**

<table>
<thead>
<tr>
<th>Problem</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>One short beep, pause, three short beeps, pause, three more short beeps, and one short beep</td>
<td>Ensure that memory modules are installed correctly. If they are, and you still hear the beeps, have the computer serviced.</td>
</tr>
<tr>
<td>Four cycles of four short beeps</td>
<td>The Security Chip has a problem. Have the computer serviced.</td>
</tr>
<tr>
<td>Five short beeps, pause, five short beeps, and pause</td>
<td>Continue to boot immediately when the error was detected.</td>
</tr>
</tbody>
</table>

## LCD-related symptoms

**Important:** The TFT LCD for the notebook computer contains many thin-film transistors (TFTs). The presence of a small number of dots that are missing, discolored, or always lighted is characteristic of TFT LCD technology, but excessive pixel problems can cause viewing concerns.
If the LCD you are servicing has two or less visible defective pixels, it should not be considered faulty. However, if the LCD has three or more visible defective pixels, it will be deemed as defective by Lenovo and it should be replaced.

**Notes:**
- This policy applies to all ThinkPad notebook computers purchased on 1 January, 2008 or later.
- Lenovo will not provide replacement if the LCD is within specification as we cannot guarantee that any replacement LCD will have zero pixel defects.
- One pixel consists of R, G, B sub-pixels.

**Table 6. LCD-related symptoms**

<table>
<thead>
<tr>
<th>Symptom or error</th>
<th>FRU or action, in sequence</th>
</tr>
</thead>
<tbody>
<tr>
<td>No beep, power-on indicator on, and a blank LCD during POST.</td>
<td>System board.</td>
</tr>
</tbody>
</table>
| • LCD backlight not working.  
• LCD too dark.  
• LCD brightness cannot be adjusted.  
• LCD contrast cannot be adjusted. | 1. **Reseat the LCD connectors.**  
2. LCD assembly.  
| • LCD screen unreadable.  
• Characters missing pixels.  
• Screen abnormal.  
• Wrong color displayed. | 1. **See important note for “LCD-related symptoms.”**  
2. Reseat all LCD connectors.  
3. LCD assembly.  
4. System board. |
| Horizontal or vertical lines displayed on LCD. | **LCD assembly.** |

**Intermittent problems**

Intermittent system hang problems can be due to a variety of causes that have nothing to do with a hardware defect, such as cosmic radiation, electrostatic discharge, or software errors. FRU replacement should be considered only when a problem recurs.

**Undetermined problems**

If the diagnostic tests did not identify the device that has failed, if wrong devices are installed, or if the system simply is not operating, follow these procedures to isolate the failing FRU (do not isolate FRUs that have no defects).

Verify that all attached devices are supported by the computer.

Verify that the power supply being used at the time of the failure is operating correctly. (See “Power system checkout” on page 28)

1. Turn off the computer.
2. Visually check each FRU for damage. Replace any damaged FRU.
3. Remove or disconnect all of the following devices:
   a. Non-ThinkPad devices  
   b. Printer, mouse, and other external devices  
   c. Hard disk drive  
   d. External diskette drive or optical drive  
   e. Memory module on the left memory slot, if there is one  
   f. PC Cards
4. Turn on the computer.
5. Determine whether the problem has been solved.
6. If the problem does not recur, reconnect the removed devices one at a time until you find the failing FRU.
7. If the problem remains, replace the following FRUs one at a time (do not replace a nondefective FRU):
a. System board  
b. LCD assembly
Chapter 5. Status indicators

This chapter presents the system status indicators that show the status of the computer.

Table 7. Status indicators

<table>
<thead>
<tr>
<th>Indicator</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 Caps Lock status indicator</td>
<td>When the Caps Lock mode is enabled, this indicator will be displayed on the screen. You can type all alphabetic characters in uppercase (A-Z) directly.</td>
</tr>
</tbody>
</table>
| 2 Device access indicator        | • Blinking green: The storage device is being accessed.  
                                | • Off: The storage device is not in operation.                                                                                           |
| 3 ac power status indicator      | • Green: The ac power adapter is connected. If a battery is installed on the computer, when this indicator is on, it also indicates the battery is charging.  
<pre><code>                            | • Off: The ac power adapter is not connected.                                                                                           |

2 Bottom cover

Locating FRUs and CRUs

This topic introduces the following service parts:
• “Major FRUs and CRUs” on page 48
• “LCD FRUs and CRUs” on page 50
Notes:

- Each FRU is available for all types or models, unless otherwise specified.
- **CRU statement for customers:**

You can resolve some problems with your product with a replacement part you can install yourself, called a “Customer Replaceable Unit” or “CRU.” Some CRUs are designated as self-service CRUs and others are designated as optional-service CRUs. **Installation of self-service CRUs is your responsibility. For optional-service CRUs, you can either install the CRU yourself or you can request that a Service Provider install the CRU according to the warranty service for your product.** If you intend on installing the CRU, Lenovo will ship the CRU to you. CRU information and replacement instructions are shipped with your product and are available from Lenovo at any time upon request. You can find a list of CRUs for your product in this *Hardware Maintenance Manual.* An electronic version of this manual can be found at http://www.lenovo.com/support. Click *User Guides & Manuals* and then follow the on-screen instructions to find the manual for your product. You might be required to return the defective part that is replaced by the CRU. When return is required: (1) return instructions, a prepaid shipping label, and a container will be included with the replacement CRU; and (2) you might be charged for the replacement CRU if Lenovo does not receive the defective CRU within thirty (30) days of your receipt of the replacement CRU. See your Lenovo Limited Warranty documentation for full details.

ThinkPad computers contain the following types of CRUs:

- **Self-service CRUs:** These CRUs unplug or are held by no more than two screws. Examples of these types of CRUs include the ac power adapter, power cord, battery, and hard disk drive. Other self-service CRUs depending on product design might include the memory module, wireless card, keyboard, and palm rest with finger print reader and touch pad.

- **Optional-service CRUs:** These CRUs are isolated parts within the computer that are concealed by an access panel that is typically secured by more than two screws. Once the access panel is removed, the specific CRU is visible.

**Looking up FRU information**

For detailed FRU information, including part numbers, descriptions, and substitution part numbers, go to http://www.lenovo.com/serviceparts-lookup.
Chapter 8. FRU replacement notices

This chapter presents notices related to removing and replacing parts. Read this chapter carefully before replacing any FRU.

Notes:
- Each FRU is available for all types or models, unless otherwise specified.
- CRU statement for customers:
  You can resolve some problems with your product with a replacement part you can install yourself, called a “Customer Replaceable Unit” or “CRU.” Some CRUs are designated as self-service CRUs and others are designated as optional-service CRUs. Installation of self-service CRUs is your responsibility. For optional-service CRUs, you can either install the CRU yourself or you can request that a Service Provider install the CRU according to the warranty service for your product. If you intend on installing the CRU, Lenovo will ship the CRU to you. CRU information and replacement instructions are shipped with your product and are available from Lenovo at any time upon request. You can find a list of CRUs for your product in this Hardware Maintenance Manual. An electronic version of this manual can be found at http://www.lenovo.com/support. Click User Guides & Manuals and then follow the on-screen instructions to find the manual for your product. You might be required to return the defective part that is replaced by the CRU. When return is required: (1) return instructions, a prepaid shipping label, and a container will be included with the replacement CRU; and (2) you might be charged for the replacement CRU if Lenovo does not receive the defective CRU within thirty (30) days of your receipt of the replacement CRU. See your Lenovo Limited Warranty documentation for full details.

Screw notices

Loose screws can cause a reliability problem. In the ThinkPad notebook computer, this problem is addressed with special nylon-coated screws that have the following characteristics:

- They maintain tight connections.
- They do not easily come loose, even with shock or vibration.
- They are harder to tighten.

Do the following when you service this machine:

- Keep the screw kit in your tool bag. For the part number of the screw kit, go to http://www.lenovo.com/serviceparts-lookup
- It is recommended to use new screws.
- It is recommended to use each screw only once.
- Use a torque screwdriver if you have one.

Tighten screws as follows:

- **Plastic to plastic**
  Turn an additional 90 degrees after the screw head touches the surface of the plastic part.

  ![90 degrees more](Cross-section)

- **Logic card to plastic**
  Turn an additional 180 degrees after the screw head touches the surface of the logic card.
Notes:
- Ensure that you use the correct screw. It is recommended to use new screws for replacements.
- If you have a torque screwdriver, tighten all screws firmly to the torque specified in the screw information table for each step.
- Ensure torque screw drivers are calibrated correctly following the country specifications.

## Retaining serial numbers

This section includes the following descriptions:

- “Restoring the serial number of the system unit” on page 54
- “Retaining the UUID” on page 55
- “Reading or writing the ECA information” on page 55

## Restoring the serial number of the system unit

When the computer was manufactured, the EEPROM on the system board was loaded with the serial numbers of the system and all major components. These numbers need to remain the same throughout the life of the computer.

If you replace the system board, you must restore the serial number of the system unit to its original value.

Before replacing the system board, save the original serial number by doing the following:

1. Install the LENOVO ThinkPad Hardware Maintenance Diskette Version 1.76 or later, and restart the computer.
2. From the main menu, select **1. Set System Identification**.
3. Select **2. Read S/N data from EEPROM**. The serial number of the system unit is listed as **20: Serial number**.
4. Write down that number.

**Note:** The serial number of the system unit also is written on the label attached to the bottom of the computer.

After you have replaced the system board, restore the serial number by doing the following:

1. Install the LENOVO ThinkPad Hardware Maintenance Diskette Version 1.76 or later and restart the computer.
2. From the main menu, select **1. Set System Identification**.
3. Select **1. Add S/N data from EEPROM**. Follow the instructions on the screen.

If the MTM and Product ID numbers differ from each other on the rear label, use what is shown for the Product ID field. See example below:

**MTM on rear label:**

```
TTTT-CTO S/N SSSSSSS
```
Product ID on rear label:
TTTT-MMM (Use this number when setting Serial Number)

In the example, the Serial Number to be input is “1STTTMMSSSSSSS”.

Retaining the UUID

The Universally Unique Identifier (UUID) is a 128-bit number uniquely assigned to your computer at production and stored in the EEPROM of your system board. The algorithm that generates the number is designed to provide unique IDs until the year A.D. 3400. No two computers in the world have the same number.

When you replace the system board, you must set the UUID on the new system board by doing the following:
1. Install the LENOVO ThinkPad Hardware Maintenance Diskette Version 1.76 or later, and restart the computer.
2. From the main menu, select 4. Assign UUID. A new UUID is created and written. If a valid UUID already exists, it is not overwritten.

Reading or writing the ECA information

Information on Engineering Change Announcements (ECA) are stored in the EEPROM of the system board. The electronic storage of this information simplifies the procedure to check if the ECA has been previously applied to a machine. The machine does not need to be disassembled to check for the ECA application.

To check what ECAs have been previously applied to the machine, use the ECA Information Read/Write function on the LENOVO ThinkPad Hardware Maintenance Diskette Version 1.76 or later.
1. Insert the LENOVO ThinkPad Hardware Maintenance Diskette Version 1.76 or later, and restart the computer.
2. From the main menu, select 6. Set ECA Information.
3. To read the ECA information, select 2. Read ECA/rework number from EEPROM and follow the instructions on the screen.
4. To read the box build date, select 5. Read box build date from EEPROM, and follow the instructions on the screen.

After an ECA has been applied to the machine, the EEPROM must be updated to reflect the ECA’s application. Use the LENOVO ThinkPad Hardware Maintenance Diskette Version 1.76 or later to update the EEPROM.

Note: Only the ECA number is stored in the EEPROM. The machine type of the ECA is assumed to be the same as the machine type of the machine that had the ECA applied to it.
1. Insert the LENOVO ThinkPad Hardware Maintenance Diskette Version 1.76 or later, and restart the computer.
2. From the main menu, select 6. Set ECA Information.
3. To write the ECA information, select 1. Write ECA/rework number from EEPROM, and follow the instructions on the screen.
4. To write the box build date, select 4. Write box build date from EEPROM, and follow the instructions on the screen.

If the system board is being replaced, try to read the ECA information from the old system board and transfer the information to the new system. If the system board is inoperable, this will not be possible.
Chapter 9. Removing or replacing a FRU

This chapter provides instructions on how to remove or replace a FRU.

**CRU statement for customers:**
You can resolve some problems with your product with a replacement part you can install yourself, called a “Customer Replaceable Unit” or “CRU.” Some CRUs are designated as self-service CRUs and others are designated as optional-service CRUs. *Installation of self-service CRUs is your responsibility.* For optional-service CRUs, you can either install the CRU yourself or you can request that a Service Provider install the CRU according to the warranty service for your product. If you intend on installing the CRU, Lenovo will ship the CRU to you. CRU information and replacement instructions are shipped with your product and are available from Lenovo at any time upon request. You can find a list of CRUs for your product in this Hardware Maintenance Manual. An electronic version of this manual can be found at [http://www.lenovo.com/support](http://www.lenovo.com/support). Click User Guides & Manuals and then follow the on-screen instructions to find the manual for your product. You might be required to return the defective part that is replaced by the CRU. When return is required: (1) return instructions, a prepaid shipping label, and a container will be included with the replacement CRU; and (2) you might be charged for the replacement CRU if Lenovo does not receive the defective CRU within thirty (30) days of your receipt of the replacement CRU. See your Lenovo Limited Warranty documentation for full details.

**General guidelines**

When removing or replacing a FRU, be sure to observe the following general guidelines:

1. Do not try to service any computer unless you have been trained and certified. An untrained person runs the risk of damaging parts.
2. Before replacing any FRU, review Chapter 8 “FRU replacement notices” on page 53.
3. Begin by removing any FRUs that have to be removed before replacing the failing FRU. Such FRUs are listed at the beginning of each FRU replacement procedure. Remove them in the order in which they are listed.
4. Follow the correct sequence in the steps for removing a FRU, as given in the drawings by the numbers in square callouts.
5. When turning a screw, turn it in the direction as given by the arrow in the drawing.
6. When removing a FRU, move it in the direction as given by the arrow in the drawing.
7. To put the new FRU in place, reverse the removal procedure and follow any notes that pertain to replacement.
8. When replacing a FRU, use the correct screw(s) as shown in the replacement procedure.

![DANGER]

**Before removing any FRU, disable the built-in battery.** See “Disabling the battery pack in the UEFI BIOS” on page 58.

**Attention:** After replacing a FRU, do not turn on the computer until you have ensured that all screws, springs, and other small parts are in place and none are loose inside the computer. Verify this by shaking the computer gently and listening for rattling sounds. Metallic parts or metal flakes can cause electrical short circuits.

**Attention:** The system board is sensitive to, and can be damaged by, electrostatic discharge. Before touching it, establish personal grounding by touching a ground point with one hand or by using an electrostatic discharge (ESD) strap.
Before servicing the computer

Carefully read this topic before servicing the computer.

Disabling the battery pack in the UEFI BIOS

Before replacing any FRU, ensure that you have disabled the built-in battery by doing the following:

1. Turn off the computer. Disconnect the ac power adapter and all the cables from the computer.
2. Turn on the computer. When the ThinkPad logo is displayed, press F1 to enter the ThinkPad Setup program.
3. Select Config → Power. The Power submenu is displayed.
4. Select Disable built-in battery.
5. Click Yes in the Setup Warning window, then the computer will be turned off automatically. Wait for three to five minutes to let the computer cool.

Note: After the battery pack is disabled in the UEFI BIOS, it will be automatically enabled when ac power is reconnected.

Removing the SIM card

Some models you are servicing might have the SIM card that the customer has installed. If the computer you are servicing has the SIM card installed, remove it before you start the servicing.

After you finish the servicing, ensure that you insert the card back into the slot firmly.

1010 Bottom cover

Removal steps of bottom cover

Slide the bottom cover latch to the unlocked position 1. Hold the latch in the unlocked position, and then remove the bottom cover 2.
When installing: Slide the bottom cover latch to the unlocked position. While holding the bottom cover latch in the unlocked position, attach the bottom cover 1, and pivot it downwards until it is firmly attached 2. Release the bottom cover latch to secure the bottom cover.

DANGER

The tabs 1 on the bottom cover will cause a safety risk if they puncture the battery. To prevent damage to the li-polymer battery and to avoid the risk of high heat and fire, ensure that the tabs on the detachable cover are carefully aligned with the chassis prior to re-attaching.
**1020 Battery pack**

For access, remove this FRU:
- “1010 Bottom cover” on page 58

---

**Important notices for replacing a battery pack**

- The Lenovo Solution Center program provides an automatic battery diagnostic test that determines if the battery pack is defective. A battery pack FRU should not be replaced unless this diagnostic test shows that the battery is defective.
- The only exception to this is if the battery pack is physically damaged or a customer is reporting a possible safety issue.
- If the Lenovo Solution Center program is not installed on the computer, the customer should download and install the program to diagnose the battery pack, before replacing a non-physically damaged battery pack. Note that a physically damaged battery pack is not covered by the warranty.

---

**Removal steps of battery pack**

**DANGER**

*Use only the authorized battery specified for your computer. Any other battery could ignite or explode.*

Detach the battery pack connector 1 and then remove the screws that secure the battery pack 2.

*Note:* Be careful not to drop the battery during removal or replacement.

Remove the battery pack by using the pull tab 3.

1030 Hard disk drive or solid-state drive assembly

Attention:

- Do not drop the drive or apply any physical shock to it. The drive is sensitive to physical shock. Improper handling can cause damage and permanent loss of data.
- Before removing the drive, have the user make a backup copy of all the information on it if possible.
- Never remove the drive while the computer is operating or is in suspend mode.
For access, remove these FRUs in order:
• “1010 Bottom cover” on page 58
• “1020 Battery pack” on page 60

Removal steps of hard disk drive or solid-state drive assembly
Remove the screws 1 that secure the hard disk drive or solid-state drive assembly.

</tr>
</tbody>
</table>

Push the keyboard in the direction as shown by the arrows 2 until the hooks on the rear edge of the keyboard are detached from the keyboard bezel.

Slightly push the keyboard in the direction as shown by the arrows 4 to detach the front edge of the keyboard from the keyboard bezel.
Turn over the keyboard, and then detach the keyboard connectors.

**When installing:**

Ensure that the keyboard connectors are attached firmly.

Attach the keyboard so that the front edge of the keyboard is under the keyboard bezel as shown in the following illustration.
When the front edge of the keyboard is housed firmly, gently press the keyboard with your palms to slide the keyboard toward you until it snaps into position.

1050 Memory module

For access, remove these FRUs in order:
- “1010 Bottom cover” on page 58
- “1020 Battery pack” on page 60
- “1040 Keyboard” on page 63

Removal steps of memory module

When installing: Insert the notched end of the memory module into the socket. Press the memory module firmly, and pivot it until it snaps into place. Ensure that it is firmly installed in the slot and does not move easily.

Note: There are two memory module slots under the keyboard. If only one memory module is to be installed on the computer you are servicing, install it in the memory module slot on the right.
1060 PCI Express Mini Card for wireless LAN

For access, remove these FRUs in order:
• “1010 Bottom cover” on page 58
• “1020 Battery pack” on page 60
• “1040 Keyboard” on page 63

Removal steps of PCI Express Mini Card for wireless LAN

Detach the antenna RF connectors 1. Remove the screw 2.

<table>
<thead>
<tr>
<th>Step</th>
<th>Screw (quantity)</th>
<th>Color</th>
<th>Torque</th>
</tr>
</thead>
<tbody>
<tr>
<td>2</td>

<td></td>
<td>(1.85 kgf-cm)</td>
</tr>
</tbody>
</table>

When installing: Plug the gray cable into the jack marked MAIN or M, and the black cable into the jack marked AUX or A on the card.
1070 PCI Express Mini Card for wireless WAN or mSATA solid-state drive

Depending on models, the computer you are servicing might come with one of the following cards installed: PCI Express Mini Card for wireless WAN, PCI Express Half Mini Card for wireless WAN, or mSATA solid-state drive.

For access, remove these FRUs in order:
- “1010 Bottom cover” on page 58
- “1020 Battery pack” on page 60
- “1040 Keyboard” on page 63

Removal steps of PCI Express Mini Card for wireless WAN

Detach the antenna RF connectors 1 Then remove the screw 2.

<table>
<thead>
<tr>
<th>Step</th>
<th>Screw (quantity)</th>
<th>Color</th>
<th>Torque</th>
</tr>
</thead>
<tbody>
<tr>
<td>2</td>
<td>M2 x 3.0 mm, wafer-head, nylon-coated (1)</td>
<td>Black</td>
<td>0.181 Nm (1.85 kgf-cm)</td>
</tr>
</tbody>
</table>

When installing: Plug the red cable into the jack marked MAIN, and the blue cable into the jack marked AUX on the card.
Removal steps of PCI Express Half Mini Card for wireless WAN

Detach the antenna RF connectors 1. Then remove the screw 2.

<table>
<thead>
<tr>
<th>Step</th>
<th>Screw (quantity)</th>
<th>Color</th>
<th>Torque</th>
</tr>
</thead>
<tbody>
<tr>
<td>2</td>
<td>M2 x 3.0 mm, wafer-head, nylon-coated (1)</td>
<td>Black</td>
<td>0.181 Nm (1.85 kgf-cm)</td>
</tr>
</tbody>
</table>

When installing: Plug the red cable into the jack marked MAIN, and the blue cable into the jack marked AUX on the card.
Removal steps of mSATA solid-state drive

Attention:

- Do not drop the drive or apply any physical shock to it. The drive is sensitive to physical shock. Improper handling can cause damage and permanent loss of data.
- Before removing the drive, have the user make a backup copy of all the information on it if possible.
- Never remove the drive while the computer is operating or in suspend mode.
- After installation of a new drive, go to http://www.lenovo.com/support for instructions on configuring the drive.
Remove the screw 1 that secures the mSATA solid-state drive.

<table>

</tbody>
</table>
When installing: Ensure that the end of cable marked with PB is attached firmly to the power button sub card, and the end marked with MB is attached firmly to the system board.

1150 Hard disk drive or solid-state drive cable

For access, remove these FRUs in order:
- “1010 Bottom cover” on page 58
- “1020 Battery pack” on page 60
- “1030 Hard disk drive or solid-state drive assembly” on page 61
- “1040 Keyboard” on page 63
- “1070 PCI Express Mini Card for wireless WAN or mSATA solid-state drive” on page 68
- “1090 Keyboard bezel” on page 72

Removal steps of hard disk drive or solid-state drive cable

When installing: Ensure that the connector is attached firmly to the system board.

1160 System board assembly and thermal fan assembly

Important notices for handling the system board

When handling the system board, bear the following in mind:

- The system board has an accelerometer, which can be broken if several thousands of G-forces are applied.

  **Note:** Dropping a system board from a height of as little as six inches so that it falls flat on a hard bench can subject the accelerometer to as much as 6,000 G’s of shock.

- Be careful not to drop the system board on a bench top that has a hard surface, such as metal, wood, or composite.
- If a system board is dropped, be sure to document the drop in any reject report, and replace the system board.
- Avoid rough handling of any kind.
- At every point in the process, be sure not to drop or stack the system board.
- If you put a system board down, be sure to put it only on a padded surface such as an ESD mat or a corrugated conductive surface.
For access, remove these FRUs in order:
- “1010 Bottom cover” on page 58
- “1020 Battery pack” on page 60
- “1030 Hard disk drive or solid-state drive assembly” on page 61
- “1040 Keyboard” on page 63
- “1050 Memory module” on page 66
- “1060 PCI Express Mini Card for wireless LAN” on page 67
- “1070 PCI Express Mini Card for wireless WAN or mSATA solid-state drive” on page 68
- “1080 Backup battery” on page 71
- “1090 Keyboard bezel” on page 72
- “2010 LCD unit” on page 84

**Removal steps of thermal fan assembly**

![Image of thermal fan assembly]

**When installing:** Ensure that the connector is attached firmly.

Loosen the screws 2 that secures the fan, and then loosen the screws 3 in ascending alphabetical order as illustrated.

![Image showing screw locations]

**Note:** Screws 3d, 3e, and 3f are not available on some models.
When installing:

- Before you attach the thermal fan assembly to the computer, apply thermal grease, at an amount of 0.2 grams, on the parts marked a as in the following illustrations. Either too much or too less application of grease might cause a thermal problem due to imperfect contact with a component. For models that have a discrete graphics module, you need to peel the thin film off from the rubbers marked b.
- Ensure that the thermal fan assembly connector is attached firmly to the system board. Fasten the screws 2 first and then fasten the screws 3 in descending alphabetical order as illustrated above.

For models that have a discrete graphics module:

For models that have an integrate graphics module:
Removal steps of system board

Attention: The following components soldered on the system board are extremely sensitive. When you service the system board, avoid any kind of rough handling.

- Graphic Processing Unit (GPU)
- Microprocessor
- Platform Controller Hub (PCH)

Note: The GPU is only available for models that have a discrete graphics card.

Detach the DC-in sub card connector 1, and then remove the screws 2.

Applying labels to the base cover assembly

The new base cover FRU is shipped with a kit containing labels of several kinds. Apply those labels listed when you replace the base cover. For the labels which are not shipped with the new base cover, peel them off from the old base cover, and adhere them to the new one.

Notes:
- If the Windows Certificate of Authentication (COA) label is attached to a part that is replaced, return the old part with the label attached to the customer, or provide a letter to the customer stating what the label was originally on the computer and what the label part number, serial number, and product key were.
- If there are two FCC labels on the base cover, apply both to the new base cover.

The following illustration shows the location of each label.
### 2010 LCD unit

For access, remove these FRUs in order:
- “1010 Bottom cover” on page 58
- “1040 Keyboard” on page 63
- “1060 PCI Express Mini Card for wireless LAN” on page 67
- “1070 PCI Express Mini Card for wireless WAN or mSATA solid-state drive” on page 68
- “1090 Keyboard bezel” on page 72

Chapter 9. Removing or replacing a FRU
When installing: Before you install the hinges, route the cables as shown in the following illustration. Ensure that all cables are routed on the far side of the rib and no cables are pinched under the frame.

---

**2060 Wireless antenna cables and LCD rear cover assembly**

For access, remove these FRUs in order:
- “1030 Hard disk drive or solid-state drive assembly” on page 61
- “1040 Keyboard” on page 63
- “1060 PCI Express Mini Card for wireless LAN” on page 67
- “1070 PCI Express Mini Card for wireless WAN or mSATA solid-state drive” on page 68
- “1090 Keyboard bezel” on page 72
- “2010 LCD unit” on page 84
- “2020 LCD bezel” on page 87
- “2040 Integrated camera and microphone combo card” on page 88
- “2050 Hinges” on page 89

**Removal steps of wireless antenna cables and LCD rear cover assembly**

Release the antenna cables from the LCD rear cover assembly.
Cable routing: When you install the antenna assembly, route the cables as shown in the following illustration. As you route the cables, ensure that they are not subject to any tension. Tension could cause the cables to be damaged by the cable guides, or a wire to be broken.

Note: Some models might not have the wireless WAN antennas.
Appendix A. Notices

Lenovo may not offer the products, services, or features discussed in this document in all countries. Consult your local Lenovo representative for information on the products and services currently available in your area.
