About this manual

This manual contains service and reference information for the following products:

<table>
<thead>
<tr>
<th>Product name</th>
<th>Machine type (MT)</th>
</tr>
</thead>
<tbody>
<tr>
<td>ThinkPad X1 Yoga Gen 8</td>
<td>20HQ and 20HR</td>
</tr>
<tr>
<td>ThinkPad X1 Carbon Gen 11</td>
<td>20HM and 20HN</td>
</tr>
</tbody>
</table>

ThinkPad X1 Yoga Gen 8 and ThinkPad X1 Carbon Gen 11 might be shipped with different microprocessors, namely Intel® and Advanced Micro Devices (AMD). Hereby Intel models and AMD models are used to distinguish computer models with different microprocessors.

Use this manual along with the advanced diagnostic tests to troubleshoot problems.

Important:

- This manual is intended only for trained service technicians who are familiar with products. Use this manual along with the advanced diagnostic tests to troubleshoot problems effectively.
- Depending on the model, some hardware configuration and software programs might not be available on the computer. Some statements in this manual might not be applicable to the computer.
- Before servicing a product, be sure to read all the information under Chapter 1 “Safety information” on page 1 and Chapter 2 “Important service information” on page 19.
Chapter 1. Safety information

This chapter presents following safety information that you need to be familiar with before you service a notebook computer.

• “General safety” on page 1
• “Electrical safety” on page 1
• “Safety inspection guide” on page 3
• “Handling devices that are sensitive to electrostatic discharge” on page 3
• “Grounding requirements” on page 4
• “Safety notices (multilingual translations)” on page 4

General safety

Follow these rules to ensure general safety:

• Observe good housekeeping in the area of the machines during and after maintenance.
• When lifting any heavy object:
  1. Ensure that you can stand safely without slipping.
  2. Distribute the weight of the object equally between your feet.
  3. Use a slow lifting force. Never move suddenly or twist when you attempt to lift.
  4. Lift by standing or by pushing up with your leg muscles; this action removes the strain from the muscles in your back. Do not attempt to lift any object that weighs more than 16 kg (35 lb) or that you think is too heavy for you.
• Do not perform any action that causes hazards to the customer, or that makes the equipment unsafe.
• Before you start the machine, ensure that other service technicians and the customer's personnel are not in a hazardous position.
• Place removed covers and other parts in a safe place, away from all personnel, while you are servicing the machine.
• Keep your tool case away from walk areas so that other people will not trip over it.
• Do not wear loose clothing that can be trapped in the moving parts of a machine. Ensure that your sleeves are fastened or rolled up above your elbows. If your hair is long, fasten it.
• Insert the ends of your necktie or scarf inside clothing or fasten it with a nonconductive clip, about 8 centimeters (3 inches) from the end.
• Do not wear jewelry, chains, metal-frame eyeglasses, or metal fasteners for your clothing, because metal objects are good electrical conductors.
• Wear safety glasses when you are hammering, drilling, soldering, cutting wire, attaching springs, using solvents, or working in any other conditions that might be hazardous to your eyes.
• After service, reinstall all safety shields, guards, labels, and ground wires. Replace any safety device that is worn or defective.
• Reinstall all covers correctly before returning the machine to the customer.
• Fan louvers on the machine help to prevent overheating of internal components. Do not obstruct fan louvers or cover them with labels or stickers.

Electrical safety

Observe the following rules when working on electrical equipment.
Important:

- Use only approved tools and test equipment. Some hand tools have handles covered with a soft material that does not insulate you when working with live electrical currents.

- Many customers have, near their equipment, rubber floor mats that contain small conductive fibers to decrease electrostatic discharges (ESD). Do not use this type of mat to protect yourself from electrical shock.

- Find the room emergency power-off (EPO) switch, disconnecting switch, or electrical outlet. If an electrical accident occurs, you can then operate the switch or unplug the power cord quickly.

- Do not work alone under hazardous conditions or near equipment that has hazardous voltages.

- Disconnect all power before:
  - Performing a mechanical inspection
  - Working near power supplies
  - Removing or installing main units

- Before you start to work on the machine, unplug the power cord. If you cannot unplug it, ask the customer to power off the wall box that supplies power to the machine, and to lock the wall box in the off position.

- If you need to work on a machine that has exposed electrical circuits, observe the following precautions:
  - Ensure that another person, familiar with the power-off controls, is near you. That person must be there to switch off the power, if necessary.
  - Use only one hand when working with powered-on electrical equipment; keep the other hand in your pocket or behind your back.

 CAUTION:

 An electrical shock can occur only when there is a complete circuit. By observing the above rule, you may prevent a current from passing through your body.

  - When using testers, set the controls correctly and use the approved probe leads and accessories for that tester.
  - Stand on suitable rubber mats (obtained locally, if necessary) to insulate you from grounds such as metal floor strips and machine frames.

Observe the special safety precautions when you work with very high voltages. Instructions for these precautions are in the safety sections of maintenance information. Use extreme care when measuring high voltages.

- Regularly inspect and maintain your electrical hand tools for safe operational condition.
- Do not use worn or broken tools and testers.
- Never assume that power has been disconnected from a circuit. First, check that it has been powered off.
- Always look carefully for possible hazards in your work area. Examples of these hazards are moist floors, nongrounded power extension cables, power surges, and missing safety grounds.
- Do not touch live electrical circuits with the reflective surface of a plastic dental mirror. The surface is conductive; such touching can cause personal injury and machine damage.
- Do not service the following parts with the power on:
  - Power supply units
  - Fans
  - Units similar to those listed above

  This practice ensures correct grounding of the units.

- If an electrical accident occurs:
  - Use caution; do not become a victim yourself.
  - Switch off power.
  - Send another person to get medical aid.
Safety inspection guide

The purpose of this inspection guide is to assist you in identifying potentially unsafe conditions. As each machine was designed and built, required safety items were installed to protect users and service technicians from injury. This guide addresses only those items. You should use good judgment to identify potential safety hazards due to attachment of non-ThinkPad / non-Lenovo features or options not covered by this inspection guide.

If any unsafe conditions are present, you must determine how serious the apparent hazard could be and whether you can continue without first correcting the problem.

Consider these conditions and the safety hazards they present:

- Electrical hazards, especially primary power (primary voltage on the frame can cause serious or fatal electrical shock)
- Explosive hazards, such as a damaged CRT face or a bulging capacitor
- Mechanical hazards, such as loose or missing hardware

To determine whether there are any potentially unsafe conditions, use the following checklist at the beginning of every service task. Begin the checks with the power off, and the power cord disconnected.

Checklist:

1. Check exterior covers for damage (loose, broken, or sharp edges).
2. Turn off the computer. Disconnect the power cord.
3. Check the power cord for:
   a. A third-wire ground connector in good condition. Use a meter to measure third-wire ground continuity for 0.1 ohm or less between the external ground pin and the frame ground.
   b. The power cord should be the authorized type specified for your computer. Go to: https://support.lenovo.com/partslookup.
   c. Insulation must not be frayed or worn.
4. Check for cracked or bulging batteries.
5. Remove the cover.
6. Check for any obvious non-ThinkPad / non-Lenovo alterations. Use good judgment as to the safety of any non-ThinkPad / non-Lenovo alterations.
7. Check inside the unit for any obvious unsafe conditions, such as metal filings, contamination, water or other liquids, or signs of fire or smoke damage.
8. Check for worn, frayed, or pinched cables.
9. Check that the power-supply cover fasteners (screws or rivets) have not been removed or tampered with.

Handling devices that are sensitive to electrostatic discharge

Any computer part containing transistors or integrated circuits (ICs) should be considered sensitive to electrostatic discharge (ESD). ESD damage can occur when there is a difference in charge between objects. Protect against ESD damage by equalizing the charge so that the machine, the part, the work mat, and the person handling the part are all at the same charge.

Notes:

1. Use product-specific ESD procedures when they exceed the requirements noted here.
2. Ensure that the ESD protective devices you use have been certified (ISO 9000) as fully effective.

When handling ESD-sensitive parts:

• Keep the parts in protective packages until they are inserted into the product.
• Avoid contact with other people.
• Wear a grounded wrist strap against your skin to eliminate static on your body.
• Prevent the part from touching your clothing. Most clothing is insulative and retains a charge even when you are wearing a wrist strap.
• Use a grounded work mat to provide a static-free work surface. The mat is especially useful when handling ESD-sensitive devices.
• Select a grounding system, such as those listed below, to provide protection that meets the specific service requirement.

  **Note:** The use of a grounding system to guard against ESD damage is desirable but not necessary.
  – Attach the ESD ground clip to any frame ground, ground braid, or green-wire ground.
  – When working on a double-insulated or battery-operated system, use an ESD common ground or reference point. You can use coax or connector-outside shells on these systems.
  – Use the round ground prong of the ac plug on ac-operated computers.

**Grounding requirements**

Electrical grounding of the computer is required for operator safety and correct system function. Proper grounding of the electrical outlet can be verified by a certified electrician.

**Safety notices (multilingual translations)**

The safety notices in this section are provided in the following languages:

• English
• Arabic
• Brazilian Portuguese
• French
• German
• Hebrew
• Japanese
• Korean
• Spanish
• Traditional Chinese

---

**DANGER**

Before the computer is powered on after FRU replacement, make sure that all screws, springs, and other small parts are in place and are not left loose inside the computer. Verify this by shaking the computer and listening for rattling sounds. Metallic parts or metal flakes can cause electrical short circuits.

---

**DANGER**
Some standby batteries contain a small amount of nickel and cadmium. Do not disassemble a standby battery, recharge it, throw it into fire or water, or short-circuit it. Dispose of the battery as required by local ordinances or regulations. Use only the battery in the appropriate parts listing. Use of an incorrect battery can result in ignition or explosion of the battery.

DANGER

The battery pack contains small amounts of nickel. Do not disassemble it, throw it into fire or water, or short-circuit it. Dispose of the battery pack as required by local ordinances or regulations. Use only the battery in the appropriate parts listing when replacing the battery pack. Use of an incorrect battery can result in ignition or explosion of the battery.

DANGER

The lithium battery can cause a fire, an explosion, or a severe burn. Do not recharge it, remove its polarized connector, disassemble it, heat it above 100°C (212°F), incinerate it, or expose its cell contents to water. Dispose of the battery as required by local ordinances or regulations. Use only the battery in the appropriate parts listing. Use of an incorrect battery can result in ignition or explosion of the battery.

DANGER

If the LCD breaks and the fluid from inside the LCD gets into your eyes or on your hands, immediately wash the affected areas with water for at least 15 minutes. Seek medical care if any symptoms from the fluid are present after washing.

DANGER

To avoid shock, do not remove the plastic cover that protects the lower part of the inverter card.

DANGER

Though the main batteries have low voltage, a short-circuited or grounded battery can produce enough current to burn personnel or combustible materials.
Unless hot swap is allowed for the FRU being replaced, do as follows before removing it: power off the computer, unplug all power cords from electrical outlets, remove the battery pack, and disconnect any interconnecting cables.

⚠️

Before reassembling the computer, make sure that all FRUs, including the keyboard and the ThinkPad keyboard, have been reassembled properly. Ensure that the computer has been restarted, and then turn it on and check the following:

- The computer starts up normally.
- The keyboard functions correctly.

If either of these conditions is not met, repeat the steps above until the problem is resolved.

⚠️

The computer may become warm during normal operation. If you notice heat generation, check the following:

- Ensure that the computer is placed on a flat, stable surface.
- Check the ventilation area to ensure proper airflow.

If the computer continues to generate heat, contact your service provider for assistance.

⚠️

During normal operation, the computer may emit a loud sound. If you notice any unusual noise, check the following:

- Ensure that the computer is placed on a flat, stable surface.
- Check the ventilation area to ensure proper airflow.

If the sound continues, contact your service provider for assistance.

⚠️

If you notice any unusual vibration or movement during operation, check the following:

- Ensure that the computer is placed on a flat, stable surface.
- Check the ventilation area to ensure proper airflow.

If the vibration or movement continues, contact your service provider for assistance.

⚠️

If you notice any unusual odors during operation, check the following:

- Ensure that the computer is placed on a flat, stable surface.
- Check the ventilation area to ensure proper airflow.

If the odors continue, contact your service provider for assistance.

⚠️

If you notice any unusual noise or vibration during operation, check the following:

- Ensure that the computer is placed on a flat, stable surface.
- Check the ventilation area to ensure proper airflow.

If the noise or vibration continues, contact your service provider for assistance.
Chapter 1. Safety information

PERIGO

![Danger](image1.png)

To avoid injury or death, do not attempt to remove the battery pack, which contains a small quantity of nickel and cadmium. Do not replace or recharge a battery in water, or allow it to become wet. Do not enter a wet battery. Do not use a battery that has been submerged in water. If any battery liquid or particles get into your eyes, wash them with clean water for at least 15 minutes and seek medical attention immediately.

PERIGO

![Danger](image2.png)

Some batteries contain a small amount of nickel and cadmium. Do not replace or recharge a battery in water, or allow it to become wet. Do not use a battery that has been submerged in water. If any battery liquid or particles get into your eyes, wash them with clean water for at least 15 minutes and seek medical attention immediately.

PERIGO

![Danger](image3.png)

The battery pack contains a small amount of nickel and cadmium. Do not replace or recharge a battery in water, or allow it to become wet. Do not use a battery that has been submerged in water. If any battery liquid or particles get into your eyes, wash them with clean water for at least 15 minutes and seek medical attention immediately.
PERIGO

A bateria de íólio pode causar incêndio, explosão ou graves queimaduras. Não a recarregue, remova seu conector polarizado, desmonte-a, aqueça-a acima de 100°C (212°F), incinere-a, ou exponha o conteúdo de sua célula à água. Descarte a bateria conforme requerido pelas leis ou regulamentos locais. Use somente a bateria nas partes listadas apropriadas. O uso de uma bateria incorreta pode resultar em combustão ou explosão da bateria.

⚠️

PERIGO

Se o LCD quebrar e o fluido de dentro dele entrar em contato com seus olhos ou com suas mãos, lave as áreas afetadas imediatamente com água durante pelo menos 15 minutos. Procure cuidados médicos se algum sintoma causado pelo fluido surgir após a lavagem.

⚠️

PERIGO

Para evitar choque elétrico, não remova a capa plástica que protege a parte inferior da placa inversora.

⚠️

PERIGO

Embora as principais baterias possuam baixa voltagem, uma bateria em curto-circuito ou aterrada pode produzir corrente o bastante para queimar materiais de pessoal ou inflamáveis.

⚠️

PERIGO

A menos que uma hot swap seja permitida para a FRU que está sendo substituída, faça o seguinte antes de removê-la: desligue o computador, desconecte todos os cabos de energia das tomadas, remova o pacote de baterias e desconecte quaisquer cabos de interconexão.

⚠️

DANGER

Avant de remettre l'ordinateur sous tension après remplacement d'une unité en clientèle, vérifiez que tous les ressorts, vis et autres pièces sont bien en place et bien fixées. Pour ce faire, secouez l'unité et assurez-vous qu'aucun bruit suspect ne se produit. Des pièces métalliques ou des copeaux de métal pourraient causer un court-circuit.

⚠️

DANGER
Certaines batteries de secours contiennent du nickel et du cadmium. Ne les démontez pas, ne les rechargez pas, ne les exposez ni au feu ni à l'eau. Ne les mettez pas en court-circuit. Pour les mettre au rebut, conformez-vous à la réglementation en vigueur. Lorsque vous remplacez la pile de sauvegarde ou celle de l'horloge temps réel, veillez à n'utiliser que les modèles cités dans la liste de pièces détachées adéquate. Une batterie ou une pile inappropriée risque de prendre feu ou d'expoler.

⚠️

DANGER

La batterie contient du nickel. Ne la démontez pas, ne l'exposez ni au feu ni à l'eau. Ne la mettez pas en court-circuit. Pour la mettre au rebut, conformez-vous à la réglementation en vigueur. Lorsque vous remplacez la batterie, veillez à n'utiliser que les modèles cités dans la liste de pièces détachées adéquate. En effet, une batterie inappropriée risque de prendre feu ou d'expoler.

⚠️

DANGER

La pile de sauvegarde contient du lithium. Elle présente des risques d'incendie, d'explosion ou de brûlures graves. Ne la rechargez pas, ne retirez pas son connecteur polarisé et ne la démontez pas. Ne l'exposez pas à une température supérieure à 100°C, ne la faites pas brûler et n'en exposez pas le contenu à l'eau. Mettez la pile au rebut conformément à la réglementation en vigueur. Une pile inappropriée risque de prendre feu ou d'expoler.

⚠️

DANGER

Si le panneau d’affichage à cristaux liquides se brise et que vous recevez dans les yeux ou sur les mains une partie du fluide, rincez-les abondamment pendant au moins quinze minutes. Consultez un médecin si des symptômes persistent après le lavage.

⚠️

DANGER

Afin d'éviter tout risque de choc électrique, ne retirez pas le cache en plastique protégeant la partie inférieure de la carte d’alimentation.

⚠️

DANGER

Bien que le voltage des batteries principales soit peu élevé, le court-circuit ou la mise à la masse d'une batterie peut produire suffisamment de courant pour brûler des matériaux combustibles ou causer des brûlures corporelles graves.
DANGER

Si le remplacement à chaud n’est pas autorisé pour l’unité remplaçable sur site que vous remplacez, procédez comme suit avant de retirer l’unité : mettez l’ordinateur hors tension, débranchez tous les cordons d’alimentation des prises de courant, retirez le bloc de batterie et déconnectez tous les câbles d’interconnexion.

VORSICHT

VORSICHT

VORSICHT

VORSICHT

VORSICHT

VORSICHT
Aus Sicherheitsgründen die Kunststoffabdeckung, die den unteren Teil der Spannungswandlerplatine umgibt, nicht entfernen.

VORSICHT
Obwohl Hauptbatterien eine niedrige Spannung haben, können sie doch bei Kurzschluß oder Erdung genug Strom abgeben, um brennbare Materialien zu entzünden oder Verletzungen bei Personen hervorzurufen.

VORSICHT
Wenn ein Austausch der FRU bei laufendem Betrieb nicht erlaubt ist, gehen Sie beim Austausch der FRU wie folgt vor: Schalten Sie den Computer aus, ziehen Sie alle Netzkabel von den Netzsteckdosen ab, entfernen Sie den Akku und ziehen Sie alle miteinander verbundenen Kabel.
パッテリー・バックには微量のニッケルが含まれています。パッテリー・バックを分解したり、火または水の中に投げ込んだり、ショートさせないでください。パッテリー・バックの裏面にあって、地方自治体の条例または規則に従ってください。パッテリー・バックを交換するときは、適切なパーツ・リストにあるパッテリーだけを使用してください。誤ったパッテリーを使用すると、パッテリーが発火したり、爆発したりすることがあります。

警告

リチウム・パッテリーは、火災、爆発、または重物を引き起こすことがあります。バッテリー・バックの充電、その極性コネクターやの取り外し、バッテリー本体の分解、100℃（212°F）以上での加熱、焼却、電池の中身を水に浸すことはしないでください。バッテリーを廃棄する場合は地方自治体の条例に従ってください。適切なパーツ・リストにあるパッテリーだけを使用してください。誤ったパッテリーを使用すると、パッテリーが発火したり、爆発したりすることがあります。

警告

LCD が破損し、LCD の中の液体が目に入ったり、手に触れたりした場合は、液体が触れた部分を少なくとも 15 分間洗い流してください。洗い流した後に、液体によって何らかの症状が現れた場合は、速やかに医師の治療を受けてください。

警告

感電を防ぐため、インバーター・カードの下部を保護しているプラスチック・カバーを外さないでください。

警告

メイン・パッテリーの電圧は低くても、ショートしたり、接地したパッテリーが、作業者にけがを負わせたり、可燃物を燃やすだけの電流を発生させる場合があります。

警告

交換しようとしている FRU がホット・スワップに対応していない場合、それを取り外す前に、コンピュータの電源をオフにして、すべての電源コードをコンセントから抜き、バッテリー・バックを取り外して、相互接続しているケーブルをすべて切り離してください。

警告

FRUを交換すると、システムは再起動をトリガーに、ケーブル、ケーブル、ケーブル、ケーブル、ケーブルをすべて再接続する必要があります。新しい FRU 型番が指示されているか、そうでない場合は、新しい FRU を交換せずに、システムを再起動してください。
 일부 보조 배터리에는 소량의 날개 및 카트리지가 포함되어 있습니다. 보조 배터리를 분해하거나, 다시 조립하거나, 용 또는 온도에 노출하거나, 단락시켜가지 마십시오. 배터리 폭을 펼치할 때에는 해당 지역의 법률 규정을 따르십시오. 배터리 폭을 폐기할 때에는 올바른 배터리만 사용하십시오. 올바르지 않은 배터리를 사용하면 배터리가 발화하거나 폭발할 수 있습니다.

위험

배터리 패에는 소량의 날개가 포함되어 있습니다. 배터리 패를 분해하거나, 용 또는 온도에 노출하거나, 단락시켜가지 마십시오. 배터리 폭을 폐기할 때에는 해당 지역의 법률 규정을 따르십시오. 배터리 패를 폐기할 때에는 올바른 배터리만 사용하십시오. 올바르지 않은 배터리를 사용하면 배터리가 발화되거나 폭발할 수 있습니다.

위험

리튬 배터리는 화재, 폭발 또는 심각한 화상을 일으킬 수 있습니다. 리튬 배터리를 다시 조립하거나, 극성 커넥터를 제거하거나, 분해하거나, 100°C(212°F) 이상으로 가열하거나, 소각하거나, 전지 내용물을 묻혀 노출시키지 마십시오. 배터리를 폐기할 때에는 해당 지역의 법률 규정을 따르십시오. 올바른 배터리만 사용하십시오. 올바르지 않은 배터리를 사용하면 배터리가 발화되거나 폭발할 수 있습니다.

위험

LCD가 파손되어 LCD 내부의 역제가 눈에 들어가거나 손에 묻으면 즉시 깔끔한 물로 15분 이상 밑에 내십시오. 심은 후에 조금이라도 이상을 느끼면 즉시 병원에 가서 의사진을 받아야 합니다.

위험

전기적 위험을 방지하려면 인터페이스 카드의 아래 부분을 보호하는 플라스틱 덮개를 제거하지 마십시오.

위험

기본 배터리의 전압은 낮지만, 단락되거나 접촉된 배터리는 화상을 입히기에 충분한 전류가 흐를 수 있습니다.

위험

FRU 교체 시 Hot Swap이 지원되지 않는 경우, FRU를 제거하기 전에 컴퓨터의 전원을 꺼고, 전기 콘센트에서 전원 코드를 분리하고, 배터리를 제거한 후, 연결된 모든 케이블을 분리하십시오.

PELIGRO
Antes de encender el sistema después de sustituir una FRU, compruebe que todos los tornillos, muelles y demás piezas pequeñas se encuentran en su sitio y no se encuentran sueltos dentro del sistema. Compruébelo agitando el sistema y escuchando los posibles ruidos que provocarían. Las piezas metálicas pueden causar cortocircuitos eléctricos.

⚠️ PELIGRO

Algunas baterías de reserva contienen una pequeña cantidad de níquel y cadmio. No las desmonte, ni recargue, ni las eche al fuego o al agua ni las cortocircuite. Deséchelas tal como dispone la normativa local. Utilice sólo baterías que se encuentren en la lista de piezas. La utilización de una batería no apropiada puede provocar la ignición o explosión de la misma.

⚠️ PELIGRO

Las baterías contienen pequeñas cantidades de níquel. No las desmonte, ni recargue, ni las eche al fuego o al agua ni las cortocircuite. Deséchelas tal como dispone la normativa local. Utilice sólo baterías que se encuentren en la lista de piezas al sustituir la batería. La utilización de una batería no apropiada puede provocar la ignición o explosión de la misma.

⚠️ PELIGRO

La batería de repuesto es una batería de litio y puede provocar incendios, explosiones o quemaduras graves. No la recargue, ni quite el conector polarizado, ni la desmonte, ni caliente por encima de los 100 °C (212 °F), ni la incinere ni exponga el contenido de sus celdas al agua. Deséchela tal como dispone la normativa local.

⚠️ PELIGRO

Si la LCD se rompe y el fluido de su interior entra en contacto con sus ojos o sus manos, lave inmediatamente las áreas afectadas con agua durante 15 minutos como mínimo. Obtenga atención médica si se presenta algún síntoma del fluido después de lavarse.

⚠️ PELIGRO

Para evitar descargas, no quite la cubierta de plástico que rodea la parte baja de la tarjeta invertida.

⚠️ PELIGRO

Aunque las baterías principales tienen un voltaje bajo, una batería cortocircuitada o con contacto a tierra puede producir la corriente suficiente como para quemar material combustible o provocar quemaduras en el personal.
PELIGRO

Salvo que se permita el intercambio en caliente para la unidad sustituible localmente, realice lo siguiente antes de extraerla: apague el sistema, desconecte todos los cables de alimentación de las tomas de alimentación eléctrica, extraiga la batería y desconecte los cables de interconexión.

危険

完成 FRU 更換之後，在開啟電池的電源之前，請確定所有螺絲、彈簧及其他小零件都已歸位，沒有遺留在電腦內部。
若要確認這一點，請搖晃電腦，聽聽看是否有卡嗒的聲響。
金屬零件或儀錶的火花會造成電氣短路。

危険

部分備用電池含有微量的鎳和銅，請勿拆開備用電池、再充電、丟入火或水中，
或使其形成短路。請按照當地法令或規定來棄置電池。
僅限使用零件清單中的電池。使用不適當的電池會導致電池起火或爆炸。

危険

電池套件含有微量的鎳，請勿拆開電池套件、丟入火或水中，或使其形成短路。
請按照當地法令或規定來棄置電池套件。
更換電池套件時，僅限使用零件清單中的電池。使用不適當的電池會導致電池起火或爆炸。

危険

鋰電池會導致起火、爆炸或嚴重燒傷。請勿再充電、拔除其電流接頭、拆開、
加熱超過 100°C (212°F)、焚燒，或讓電池組成物浸到水。請按照當地法令
或規定來棄置電池。
僅限使用零件清單中的電池。使用不適當的電池會導致電池起火或爆炸。

危険

如果 LCD 被裂導致 LCD 流出的液體沾到您的眼睛或手，請立即以清水沖洗沾
染部位至少 15 分鐘。如果在清洗後出現該液體所造成的任何症狀，請就醫治
療。

危険

為避免電擊，請勿拆下轉換卡下面的塑膠護蓋。
危險

雖然主電池的電壓很低，但短路或接地電池所產生的電流仍足以使人燒傷或使可燃物質起火。

危險

除非 FRU 允許以熱插拔來替換，否則請依下列方式將其移除：將電腦關機，拔除插座上所有電源線，移除電池包，並拔開任何交互連接的線材。
Chapter 2. Important service information

This chapter introduces following important service information that applies to all machine types supported by this manual:

• “Strategy for replacing FRUs” on page 19
  – “Strategy for replacing a solid-state drive” on page 19
  – “How to use error message” on page 20
• “Strategy for replacing FRUs for CTO, special-bid, and standard models” on page 20
  – “Product definition” on page 20
  – “FRU identification” on page 20

Important:

• Advise customers to contact the Lenovo Customer Support Center if they need any assistance in obtaining or installing any software fixes, drivers, and UEFI BIOS downloads. Telephone numbers for Lenovo Support are available at: https://pcsupport.lenovo.com/supportphonelist
• System Disassembly/Reassembly videos that show the FRU removals or replacements for the Lenovo authorized service technicians are available in the following support site: https://support.lenovo.com/us/en/solutions/ht505031

Strategy for replacing FRUs

Before replacing parts:

Ensure that all software fixes, drivers, and UEFI BIOS downloads are installed before replacing any FRUs listed in this manual.

After a system board is replaced, ensure that the latest UEFI BIOS is loaded to the system board before completing the service action.

To download software fixes, drivers, and UEFI BIOS, go to https://support.lenovo.com and follow the instructions on the screen.

Use the following strategy to prevent unnecessary expense for replacing and servicing FRUs:

• If you are instructed to replace a FRU but the replacement does not correct the problem, reinstall the original FRU before you continue.
• Some computers have both a processor board and a system board. If you are instructed to replace either the processor board or the system board, and replacing one of them does not correct the problem, reinstall that board, and then replace the other one.
• If an adapter or a device consists of more than one FRU, any of the FRUs may be the cause of the error. Before replacing the adapter or device, remove the FRUs, one by one, to see if the symptoms change. Replace only the FRU that changed the symptoms.

Strategy for replacing a solid-state drive

Always try to run a low-level format operation before replacing a solid-state drive. This will erase all data on the drive. Ensure that the customer has a current backup of the data before you perform this task.

Attention: The drive startup sequence in the computer you are servicing might have been changed. Be extremely careful during write operations such as copying, saving, or formatting. If you select an incorrect drive, data or programs can be overwritten.
How to use error message

Use the error codes displayed on the screen to diagnose failures. If more than one error code is displayed, begin the diagnosis with the first error code. Whatever causes the first error code might also cause false error codes. If no error code is displayed, see whether the error symptom is listed in the section of “Symptom-to-FRU index” on page 31.

Strategy for replacing FRUs for CTO, special-bid, and standard models

This topic provides information about the model types and FRU identification.

Product definition

This topic introduces different model types and how to identify each type.

Dynamic Configure To Order (CTO) model

This model provides the ability for a customer to configure a Lenovo solution from a Web Site, and have this configuration sent to fulfillment, where it is built and shipped directly to the customer. The machine label and eSupport will load these products as the 4-character MT, 4-character model, and 2-character country code. The model is “CTO1” and the default country code is “WW” (example: 20AACTO1WW).

Special-bid model

This model is a unique configuration that has been negotiated between Lenovo and the customer. A unique MTM consists of a 4-character MT, a 4-character model, and a numeric 2-character country code is provided to the customer to place orders (example: 20AA000955). The country code assigned is numeric and does not designate a specific country or region. The custom model fact sheet for the MTM indicates which country the special bid MTM is set up for. Special-bid offering is not generally announced.

Standard model

Standard models (fixed configuration) are announced and offered to all customers. The MTM portion of the machine label consists of a 4-character MT, a 4-character model, and an alphabetic 2-character country code. The country code assigned is alphabetic and represents a designated country or region (example: 20AA0009UK).

FRU identification

To identify FRUs for a product, do the following:

2. Type the Machine Type in the corresponding field to get a general FRU list. Or type the Serial Number for more detailed FRU information.
Chapter 3. General checkout

This chapter presents following information:
- “What to do first” on page 21
- “Checkout guide” on page 22
  - “Diagnosing problems” on page 22
  - “Quick test programs” on page 23
  - “UEFI diagnostic program” on page 23
  - “Bootable diagnostic programs” on page 23
- “Power system checkout” on page 24

Some descriptions in this chapter might not apply to your particular computer.

Before you go to the checkout guide, be sure to read the following important notes.

Important notes:
- Only certified trained personnel should service the computer.
- Before replacing any FRU, read the entire page on removing and replacing FRUs.
- When you replace FRUs, it is recommended to use new nylon-coated screws.
- Be extremely careful during such write operations as copying, saving, or formatting. Drives in the computer that you are servicing sequence might have been altered. If you select an incorrect drive, data or programs might be overwritten.
- Replace a FRU only with another FRU of the correct model. When you replace a FRU, ensure that the model of the machine and the FRU part number are correct.
- A FRU should not be replaced because of a single, unreproducible failure. Single failures can occur for a variety of reasons that have nothing to do with a hardware defect, such as cosmic radiation, ESD, or software errors. Consider replacing a FRU only when a problem recurs. If you suspect that a FRU is defective, clear the error log and run the test again. If the error does not recur, do not replace the FRU.
- Be careful not to replace a nondefective FRU.

What to do first

When you return a FRU, you must include the following information in the parts exchange form or parts return form that you attach to it:
1. Name and phone number of service technician
2. Date of service
3. Date on which the machine failed
4. Date of purchase
5. Failure symptoms, error codes appearing on the display, and beep symptoms
6. Procedure index and page number in which the failing FRU was detected
7. Failing FRU name and part number
8. Machine type, model number, and serial number
9. Customer’s name and address

Note: During the warranty period, the customer may be responsible for repair costs if the computer damage was caused by misuse, accident, modification, unsuitable physical or operating environment, or improper maintenance by the customer. Following is a list of some common items that are not covered under warranty and some symptoms that might indicate that the system was subjected to stress beyond normal use.

Before checking problems with the computer, determine whether the damage is covered under the warranty by referring to the following list:
The following are not covered under warranty:

- LCD panel cracked from the application of excessive force or from being dropped
- Scratched (cosmetic) parts
- Distortion, deformation, or discoloration of the cosmetic parts
- Plastic parts, latches, pins, or connectors that have been cracked or broken by excessive force
- Damage caused by liquid spilled into the system
- Damage caused by the improper insertion of a PC Card or the installation of an incompatible card
- Diskette drive damage caused by pressure on the diskette drive cover, foreign material in the drive, or the insertion of a diskette with multiple labels
- Damaged or bent diskette eject button
- Fuses blown by attachment of a nonsupported device
- Forgotten computer password (making the computer unusable)
- Sticky keys caused by spilling a liquid onto the keyboard
- Use of an incorrect ac power adapter on laptop products

The following symptoms might indicate damage caused by nonwarranted activities:

- Missing parts might be a symptom of unauthorized service or modification.
- Check for obvious damage to a solid-state drive. If the spindle of a solid-state drive becomes noisy, the solid-state drive might have been dropped or subject to excessive force.

Checkout guide

Use the following procedures as a guide in identifying and correcting problems with the ThinkPad notebook computer.

Note: The diagnostic tests are intended to test only ThinkPad products. The use of non-ThinkPad products, prototype cards, or modified options can lead to false indications of errors and invalid system responses.

1. Identify the failing symptoms in as much detail as possible.
2. Verify the symptoms. Try to re-create the failure by running the diagnostic test or by repeating the operation.

Diagnosing problems

Many computer problems can be solved without outside assistance. If you experience a problem with your computer, the first place to start is the troubleshooting information in your computer documentation. If you suspect a software problem, see the documentation, including readme files and help information systems, that come with the operating system or program.

The Vantage app is preinstalled on your computer. It supports the hardware scan function. It combines diagnostic tests, system information collection, security status, and support information, along with hints and tips for optimal system performance.

Note: If you are unable to isolate and repair the problem yourself after running the program, save and print the log files created by the program. You need the log files when you speak to a Lenovo technical support representative.

The troubleshooting information or the diagnostic programs might tell you that you need additional or updated device drivers or other software. You can get the latest technical information and download device drivers and updates from the Lenovo Support Web site at:

https://support.lenovo.com

For additional information, see the help system of the program.
Quick test programs
Run quick test programs to troubleshoot and resolve computer problems, especially when the computer does not have the Vantage app installed.

To download and install a quick test program, go to https://www.lenovo.com/diags, and follow the instructions on the Web site.

To run a test using quick test program, do the following:
1. Go to the C:\SWTOOLS\ldiag directory.
2. Double-click the lsc_lite.exe file.
3. When the User Account Control window opens, click Yes.
4. Select the device class to be tested.
5. Select the devices to be tested.
6. Select the test to be performed.
7. Follow the instructions on the screen to start the test. When a problem is detected, information messages are displayed. Refer to the messages to troubleshoot the problem.

UEFI diagnostic program
A UEFI diagnostic program is preinstalled on the computer. This program enables you to view system information and test some hardware devices in your computer, such as memory, storage devices, the LCD, and system board buses.

To run the UEFI diagnostic program, do the following:
1. Turn on the computer. If the computer cannot be turned on, go to “Power system checkout” on page 24, and check the power sources. If an error code is displayed, go to “Symptom-to-FRU index” on page 31 for error code descriptions and troubleshooting hints.
2. When the logo screen is displayed, repeatedly press and release the F10 key. The main screen of the UEFI diagnostic program is displayed.
3. Follow the instructions on the screen to use the program.

The following table displays the main items of the UEFI diagnostic program. Depending on the model, the items might differ slightly.

<table>
<thead>
<tr>
<th>Tests</th>
<th>Tools</th>
</tr>
</thead>
<tbody>
<tr>
<td>Memory quick test</td>
<td>System information</td>
</tr>
<tr>
<td>Memory extended test</td>
<td>Generate configuration file</td>
</tr>
<tr>
<td>Memory bit fade test (180 min)</td>
<td>Execute from configuration file</td>
</tr>
<tr>
<td>Quick storage device test</td>
<td>Recover bad sectors tool</td>
</tr>
<tr>
<td>LCD test</td>
<td></td>
</tr>
<tr>
<td>PCI-e test</td>
<td></td>
</tr>
<tr>
<td>Motherboard buses test</td>
<td></td>
</tr>
<tr>
<td>Exit application</td>
<td></td>
</tr>
</tbody>
</table>

Bootable diagnostic programs
If the computer you are servicing is not installed with the UEFI diagnostic program, you can download a bootable diagnostic program from the Lenovo Support Web site. The bootable diagnostic program enables you to view system information and test some hardware devices in your computer, such as memory, storage
To use the bootable diagnostic program, you can create a bootable diagnostic medium using a USB device or disc.

To create a bootable diagnostic medium, do the following:
2. Click Lenovo Bootable Diagnostics.
3. Follow the instructions on the Web site to create a bootable diagnostic medium on a USB device or disc.

To use the diagnostic medium you have created, do one of the following:
- If you have created the bootable diagnostic medium on a USB device, do the following:
  1. Attach the USB device to the computer.
  2. Turn on the computer. If the computer cannot be turned on, go to “Power system checkout” on page 24, and check the power sources. If an error code is displayed, go to “Symptom-to-FRU index” on page 31 for error code descriptions and troubleshooting hints.
  3. When the logo screen is displayed, repeatedly press and release the F12 key. When the Boot Menu window opens, release the F12 key.
  4. Use the arrow keys to select USB HDD and then press Enter. The diagnostic program launches.
  5. Follow the instructions on the screen to use the diagnostic program.
- If you have created the bootable diagnostic medium using a disc, do the following:
  1. Turn on the computer. If the computer cannot be turned on, go to “Power system checkout” on page 24, and check the power sources. If an error code is displayed, go to “Symptom-to-FRU index” on page 31 for error code descriptions and troubleshooting hints.
  2. Insert the disc into the optical drive.
  3. Restart the computer.
  4. When the logo screen is displayed, repeatedly press and release the F12 key. When the Boot Menu window opens, release the F12 key.
  5. Use the arrow keys to select ATAPI CDx (x: 0, 1, ...) and then press Enter. The diagnostic program launches.
  6. Follow the instructions on the screen to use the diagnostic program.

---

**Power system checkout**

To verify if a battery or an ac power adapter is functional, do the following:
1. Turn off the computer.
2. Connect the ac power adapter.
3. Turn on the computer. If the computer can be turned on, it means that either the battery or the ac power adapter is functional.
4. Insert a straightened paper clip into the emergency-reset hole to reset the computer. If the computer is still powered on, it means that the ac power adapter is functional.
5. Turn off the computer.
6. Disconnect the ac power adapter and turn on the computer. If the computer can be turned on, it means that the battery is functional.

If you suspect a power problem, see the appropriate one of the following power supply checkouts:
- “Checking the ac power adapter” on page 25
- “Checking the built-in battery and operational charging” on page 25
- “Checking the coin-cell battery” on page 25
Checking the ac power adapter

If the computer fails only when the ac power adapter is used:

• If the power problem occurs only when the docking station or the port replicator is used, replace the docking station or the port replicator.
• If the system status indicator does not blink three times when an ac power source is connected, check the power cord of the ac power adapter for correct continuity and installation.
• If the computer does not charge during operation, go to “Checking the built-in battery and operational charging” on page 25.

Note: Noise from the ac power adapter does not always indicate a defect.

Checking the ac power adapter

1. Connect the computer to a power outlet and turn on the computer.
2. Start the Vantage app, and then click Hardware Settings → Power. The ac power adapter information is displayed.

Ensure that you use the ac power adapter that is shipped with the computer to provide enough power to the computer. Otherwise, a message will be displayed, prompting you that the computer will not be charged or will be charged slowly.

Checking the built-in battery and operational charging

This system supports only batteries specially designed for this specific system and manufactured by Lenovo or an authorized manufacturer. The system does not support unauthorized batteries or batteries designed for other systems. If an unauthorized battery or a battery designed for another systems is installed, the system will not charge.

Attention: Lenovo has no responsibility for the performance or safety of unauthorized batteries, and provides no warranties for failures or damage arising out of their use.

Move your pointer to the battery-status icon in the Windows notification area to check the battery status. The battery-status icon displays the percentage of battery power remaining and how long you can use your computer before you must charge the battery.

To check whether the battery charges properly during operation, do the following:

1. Discharge the battery to 50% or lower.
2. Connect the computer to ac power to charge the battery. If the battery status icon in the Windows notification area indicates that the battery is not charging, remove the battery and let it return to room temperature.
3. Reinstall the battery. If the battery is still not charging, replace the battery.
4. Check the battery status icon again. If the same error still exists, replace the system board.

Checking the coin-cell battery

Do the following:

1. Power off the computer, and unplug the ac power adapter from it.
2. Turn the computer upside down.
3. Remove the built-in battery (see “Disabling the built-in battery” on page 63).
4. Remove the coin-cell battery (see “1140 Coin-cell battery” on page 81).
5. Measure the voltage of the battery. See the following figure.
Wire | Voltage (V dc)
---|---
Red | +2.5 to +3.2
Black | Ground

- If the voltage is correct, replace the system board.
- If the voltage is not correct, replace the coin-cell battery.
- If the coin-cell battery discharges quickly after replacement, replace the system board.
Chapter 4. Related service information

This chapter presents following information:
• “Reset or restore Windows” on page 27
• “Passwords” on page 27
• “Power management” on page 30
• “Symptom-to-FRU index” on page 31

Service Web site:
When the latest maintenance diskette and the system program service diskette become available, they will be posted on:
https://support.lenovo.com

Reset or restore Windows

To reset or restore Windows, refer to the information below:
• Use Lenovo recovery options.
  1. Go to https://support.lenovo.com/HowToCreateLenovoRecovery.
  2. Follow the on-screen instructions.
• Use Window recovery options.
  2. Detect your computer or manually select your computer model.
  3. Click Diagnostics ➔ Operating system Diagnostics and then follow the on-screen instructions.

Passwords

You can set a power-on password, supervisor password, system management password, or hard disk password in UEFI BIOS to prevent unauthorized access to your computer.

If any of these passwords has been set, a prompt for it will be displayed on the screen whenever the computer is turned on. The computer does not start until the password is entered.

Note: If only a supervisor password is set, the password prompt will not be displayed when the operating system is started.

You can set a power-on password, supervisor password, system management password, or NVMe password in UEFI BIOS to prevent unauthorized access to your computer.

If any of these passwords has been set, a prompt for it will be displayed on the screen whenever the computer is turned on. The computer does not start until the password is entered.

Note: If only a supervisor password is set, the password prompt will not be displayed when the operating system is started.

Power-on password

A power-on password protects the system from being turned on by an unauthorized person. The password must be entered before the operating system can be started. For instructions on how to remove the power-on password, see “How to remove the power-on password” on page 29.
NVMe passwords

The NVMe password prevents unauthorized access to the data on the storage drive. When an NVMe password is set, you are prompted to type a correct password each time you try to access the storage drive.

- **Single Password**
  When a Single NVMe password is set, the user must enter the user NVMe password to access files and applications on the storage drive.

- **Dual Password (User + Admin)**
  The admin NVMe password is set and used by a system administrator. It enables the administrator to access any storage drive in a system or any computer connected in the same network. The administrator can also assign a user NVMe password for each computer in the network. The user of the computer can change the user NVMe password as desired, but only the administrator can remove the user NVMe password.

When prompted to enter an NVMe password, press F1 to switch between the admin NVMe password and user NVMe password.

**Notes:** The NVMe password is not available in the following situations:

- A Trusted Computing Group (TCG) Opal-compliant storage drive and a TCG Opal management software program are installed in the computer, and the TCG Opal management software program is activated.
- For Intel models, when an eDrive storage drive is installed in the computer preinstalled with the Windows 10 operating system.

Supervisor password

The supervisor password protects the system information stored in UEFI BIOS. It provides the following security features:

- If only a supervisor password is set, a password prompt is displayed when you try to enter the UEFI BIOS menu. Unauthorized users cannot change most of the system configuration options in the UEFI BIOS menu without the password.
- The system administrator can use the supervisor password to access a computer even if the user of that computer has set a power-on password. The supervisor password overrides the power-on password.
- The system administrator can set the same supervisor password on many ThinkPad notebook computers to make administration easier.

**Attention:** If the supervisor password has been forgotten and cannot be made available to the service technician, there is no service procedure to reset the password. The system board must be replaced for a scheduled fee.

System management password

The system management password can also protect the system information stored in UEFI BIOS like a supervisor password, but it has lower authority by default. The system management password can be set through the UEFI BIOS menu or through Windows Management Instrumentation (WMI) with the Lenovo client-management interface.

You can enable the system management password to have the same authority as the supervisor password to control security related features. To customize the authority of the system management password through the UEFI BIOS menu:

1. Enter the UEFI BIOS menu.
Note: When you are prompted, enter the correct supervisor password if a supervisor password has been set, or enter the correct system management password if no supervisor password has been set. Otherwise, you cannot change the configurations in the following steps.

2. Select **Security ➔ Password ➔ System Management Password Access Control**.

3. Follow the on-screen instructions.

If you have set both the supervisor password and the system management password, the supervisor password overrides the system management password. If you have set both the system management password and the power-on password, the system management password overrides the power-on password.

**How to remove the power-on password**

To remove the power-on password, do one of the following:

If no supervisor password has been set, do the following to remove the power-on password:

1. Turn off the computer.
2. Remove the battery. For instructions on how to remove the battery, see “1020 Built-in battery” on page 66.
3. Remove the coin-cell battery. For instructions on how to remove the coin-cell battery, see “1140 Coin-cell battery” on page 81.
4. Turn on the computer and wait until the POST ends. After the POST ends, the password prompt will not be displayed. The power-on password has been removed.
5. Reinstall the coin-cell battery and the battery.

If a supervisor password has been set and is known to the service technician, do the following to remove the power-on password:

1. Turn on the computer.
2. When the ThinkPad logo is displayed, immediately press F1.
3. Type the supervisor password to enter the UEFI BIOS menu.
4. Select **Security**.
5. Select **Password**.
6. Select **Power-On Password**.
7. Type the current supervisor password in the **Enter Current Password** field. Then, leave the **Enter New Password** field blank, and press Enter twice.
8. In the Changes have been saved window, press Enter.
9. Press F10 to save changes and exit.

**How to remove the NVMe password**

If you forget your NVMe password (Single password) or both user and admin NVMe passwords (Dual password), Lenovo cannot reset your passwords or recover data from the storage drive. You can contact a Lenovo authorized service provider to have the storage drive replaced. A fee will be charged for parts and service. If the storage drive is a CRU (Customer Replaceable Unit), you can also contact Lenovo to purchase a new storage drive to replace the old one by yourself. To check whether the storage drive is a CRU and the relevant replacement procedure, see “Major FRUs and CRUs (for ThinkPad X1 Carbon Gen 11)” on page 50 or “Major FRUs and CRUs (for ThinkPad X1 Yoga Gen 8)” on page 48.

**How to remove the system management password**

To remove a system management password, do the following:
If no supervisor password has been set, do the following to remove the system management password:

1. Turn off the computer and disconnect ac power.
2. Disable the built-in battery. See “Disabling the built-in battery” on page 63.
3. Remove the base cover assembly. See “1010 Base cover assembly” on page 64.
4. Remove the built-in battery. See “1020 Built-in battery” on page 66.
5. Remove the coin-cell battery. See “1140 Coin-cell battery” on page 81.
6. Reinstall the coin-cell battery.
7. Reinstall the built-in battery.
8. Reinstall the base cover assembly.
9. Reconnect ac power.
10. Turn on the computer and wait until the POST ends. After the POST ends, the password prompt does not appear. The system management password has been removed.

If a supervisor password has been set and is known to the service technician, do the following to remove the system management password:

1. Turn on the computer.
2. When the ThinkPad logo is displayed, immediately press F1.
3. Type the supervisor password to enter the ThinkPad Setup program.
4. Select **Security**.
5. Select **Password**.
6. Select **System Management Password**.
7. Type the current supervisor password in the **Enter Current Password** field. Then leave the **Enter New Password** field blank, and press Enter twice.
8. In the Changes have been saved window, press Enter.
9. Press F10 to save changes and exit the ThinkPad Setup program. The system management password has been removed.

---

**Power management**

To reduce power consumption, the computer has two power management modes: sleep and hibernation.

**Sleep mode**

When the computer enters sleep mode, the screen goes blank and all internal devices are still powered on with lower power consumption.

To enter sleep mode, press Fn+4 or open the Start menu.

In certain circumstances, the computer goes into sleep mode automatically:

- After a period of inactivity specified in power plan settings
- When the battery power is low

To resume the computer from sleep mode, press the power button.

Also, in either of the following events, the computer automatically returns from sleep mode and resumes operation:

- The ring indicator (RI) is signaled by a serial device or a PC Card device.
- The time set on the resume timer elapses.
Note: The computer does not accept any input immediately after it enters sleep mode. Wait a few seconds before taking any action to reenter operation mode.

Hibernation mode

In hibernation mode, the following occurs:

- The system status, RAM, VRAM, and setup data are stored on the solid-state drive.
- The system is powered off.

Note: If the computer enters the hibernation mode while it is connected to the dock, do not disconnect it before resuming normal operation. If you do disconnect it and then try to resume normal operation, you will get an error message, and you will have to restart the system.

If you have defined one of the following actions as the event that causes the system to go into hibernation mode, perform that action.

- Closing the lid.
- Pressing the power button.

Also, the computer goes into hibernation mode automatically after a period of inactivity specified in power plan settings.

When the power is turned on, the computer returns from hibernation mode and resumes operation. The hibernation file in the boot record on the solid-state drive is read, and system status is restored from the solid-state drive.

Symptom-to-FRU index

This section contains following information:

- “Numeric error codes” on page 32
- “Error messages” on page 33
- “Beep errors” on page 33
- “No-beep symptoms” on page 35
- “LCD-related symptoms” on page 35
- “Intermittent problems” on page 36
- “Undetermined problems” on page 37

The symptom-to-FRU index in this section lists symptoms and errors and their possible causes. The most likely cause is listed first, in boldface type.

Note: Do the FRU replacement or other actions in the sequence shown in the column headed “FRU or action, in sequence.” If replacing a FRU does not solve the problem, put the original part back in the computer. Do not replace a nondefective FRU.

This index can also help you determine, during regular servicing, what FRUs are likely to need to be replaced next.

A numeric error is displayed for each error detected in POST or system operation. In the displays, n can be any number.

If no numeric code is displayed, check the narrative descriptions of symptoms. If the symptom is not described there, go to “Intermittent problems” on page 36.

Note: For a device not supported by diagnostic codes in the ThinkPad notebook computers, see the manual for that device.
### Numeric error codes

<table>
<thead>
<tr>
<th>Symptom or error</th>
<th>FRU or action, in sequence</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>0177</strong> Bad SVP data, stop POST task — The checksum of the supervisor password in the EEPROM is not correct.</td>
<td>Replace the system board.</td>
</tr>
<tr>
<td><strong>0183</strong> Bad CRC of Security Settings in EFI Variable. Enter the ThinkPad Setup program. – The checksum of the Security settings in the EFI Variable is not correct.</td>
<td>1. Run the ThinkPad Setup program. The settings will be corrected automatically. Then save the current settings by pressing F10. 2. Replace the system board.</td>
</tr>
<tr>
<td><strong>0187</strong> EEAIA data access error - The access to EEPROM is failed.</td>

## Error messages

### Thermal sensing error.
Replace the system board.

The battery installed is not supported by this system and will not charge. Please replace the battery with the correct Lenovo battery for this system. Press the ESC key to continue.

Replace the battery.

This system does not support batteries that are not genuine Lenovo-made or authorized. The system will continue to boot, but may not charge unauthorized batteries. Press the ESC key to continue.

Attention: Lenovo has no responsibility for the performance or safety of unauthorized batteries, and provides no warranties for failures or damage arising out of their use.

Replace the battery.

---

## Beep errors

Lenovo SmartBeep technology enables you to decode beep errors with your smartphone when a black screen occurs with beeps from your computer. To decode the beep error with Lenovo SmartBeep technology, do the following:

1. Go to [https://support.lenovo.com/smartbeep](https://support.lenovo.com/smartbeep) or scan the following QR Code.

![QR Code]

2. Download the proper diagnostic app and install it on your smartphone.
3. Run the diagnostic app and place the smartphone near the computer.
4. Press the Fn key on your computer to emit the beep again. The diagnostic app decodes the beep error and shows possible solutions on the smartphone.

The following section describes some beep errors and the corresponding solutions.
**Note:** Do not attempt to service a product yourself unless instructed to do so by the Customer Support Center or product documentation. Only use a Lenovo-authorized service provider to repair your product.

<table>
<thead>

<th>Solutions</th>
</tr>
</thead>
</table>
| 0001: Reset error (platform reset not de-asserted) | 1. Remove the ac power adapter and the removable battery if your computer has one. Then, reset the computer by doing one of the following:  
   - For models with the emergency-reset hole, insert a straightened paper clip into the emergency-reset hole. Wait for one minute. Then, reconnect all power resources and restart the computer.  
   - For models without the emergency-reset hole, press and hold the power button for about seven seconds. Then, reconnect to all power resources and restart the computer.  
2. If step 1 does not work, replace the system board (service provider only). |
| 0002: Internal bus error | Replace the system board (service provider only). |
| 0281: General embedded controller error | Replace the system board (service provider only). |
| 0282: Memory module error | 1. Reinstall or replace the memory module.  
2. If step 1 does not work, replace the system board (service provider only). |
| 0283: PCI resource error | 1. Remove PCIe devices (the M.2 card, PCIe card, and so on) (service provider only).  
2. If step 1 does not work, replace the system board (service provider only). |
| 0284: TCG-compliant functionality-related error (might be the BIOS code validation failure) | Replace the system board (service provider only). |
| 0285: TCG-compliant functionality-related error (might be the TPM initialization failure) | Replace the system board (service provider only). |
| 0286: Integrated graphics error | Replace the system board (service provider only). |
| 0287: Discrete graphics error | 1. Reinstall or replace the discrete graphics card (service provider only).  
2. If step 1 does not work, replace the system board (service provider only). |
| 0288: Computer display error | 1. Reconnect the display cable on both the system board side and the computer display side (service provider only) and check the LCD panel.  
2. If step 1 does not work, connect an external display to your computer and check the status (customer or service provider).  
   - If the external display works, replace the LCD panel (service provider only).  
   - If the external display does not work, replace the system board (service provider only). |
## No-beep symptoms

### Table 3. No-beep symptoms

<table>
<thead>
<tr>
<th>Symptom or error</th>
<th>FRU or action, in sequence</th>
</tr>
</thead>
</table>
| No beep, power-on indicator on, LCD blank, and no POST.                         | 1. Run LCD Self Test.  
2. Ensure that every connector is connected tightly and correctly.  
3. Reseat memory module.  
4. Replace the system board.                                                   |
| No beep, power-on indicator on, and LCD blank during POST.                     | 1. Run LCD Self Test.  
2. Reseat memory module.  
3. Replace the system board.                                                   |
| No beep, power-on indicator on, LCD blank, and LED indicators on Esc, F1 and F4 blink sequentially during POST. | BIOS is performing memory retraining. Do not press the power button to interrupt this process. Wait a few minutes until the logo screen is displayed. |
| The power-on password prompt appears.                                          | A power-on password or a supervisor password is set. Type the password and press Enter. |
| No beep, power-on indicator on, LCD blank, and LED indicators on Esc, F1 and F4 blink sequentially during POST. | UEFI BIOS is performing memory retraining. The memory retraining might occur if any of the following situations is detected:  
- Memory module replacement  
- Total Memory Encryption setting change in UEFI BIOS  
- Memory Reference Code (MRC) change when UEFI BIOS updates  
Do not press the power button to interrupt this process. Wait a few minutes until the logo screen is displayed. |
| No beep, power-on indicator on, LCD blank, and LED indicators on Esc, F1 and F4 blink during POST. | UEFI BIOS is self-recovering. If the UEFI BIOS is corrupted or maliciously attacked, it can self-recover and restore computer from the last uncorrupted and secure backup.  
The blinking LED indicators on keys indicate the self-recovery progress:  
- LED indicator on Esc blinks: 0% to 32%  
- LED indicators on Esc and F1 blink simultaneously: 33% to 65%  
- LED indicators on Esc, F1 and F4 blink simultaneously: 66% to 100%  
Do not press the power button to interrupt this progress. Wait a few minutes until the logo screen is displayed. |
| The NVMe password prompt appears.                                              | An NVMe password is set. Type the password and press Enter.                                |

### LCD-related symptoms

**Important:** The TFT LCD for the notebook computer contains many thin-film transistors (TFTs). The presence of a small number of dots that are missing, discolored, or always lighted is characteristic of TFT LCD technology, but excessive pixel problems can cause viewing concerns.
If the LCD you are servicing has two or less visible defective pixels, it should not be considered faulty. However, if the LCD has three or more visible defective pixels, it will be deemed as defective by Lenovo and it should be replaced.

**Notes:**
- This policy applies to all ThinkPad Notebooks purchased on 1 January, 2008 or later.
- Lenovo will not provide warranty replacement if the LCD is within specifications because we cannot guarantee that any replacement LCD will have zero pixel defects.
- One pixel consists of R, G, B sub-pixels.

**LCD Self Test**

When you turn on the computer and the LCD goes black, run LCD Self Test to help you determine whether the LCD functions normally.

To run LCD Self Test:
1. Ensure that the computer is connected to ac power. Then, press the power button for about seven seconds to turn off the computer.
2. Press Fn, left Ctrl, and the power button at the same time. If the computer displays five solid colors in sequence across the entire screen, it indicates that the LCD functions normally.
3. The test lasts for about 20 seconds and then exits automatically. You also can press the power button to exit the test.

**Table 4. LCD-related symptoms**

<td>4. Replace the system board.</td>
</tr>
<tr>
<td>Horizontal or vertical lines displayed on LCD.</td>
<td>Replace the LCD assembly.</td>
</tr>
</tbody>
</table>

**Intermittent problems**

Intermittent system hang problems might happen due to a variety of causes that have nothing to do with a hardware defect, such as cosmic radiation, ESD, or software errors. FRU replacement should be considered only when a problem recurs.

When analyzing an intermittent problem, do the following:
1. Run the diagnostic test for the system board in loop mode at least 10 times.
2. If no error is detected, do not replace any FRUs.
3. If any error is detected, replace the FRU shown by the FRU code. Rerun the test to verify that no more errors exist.
Undetermined problems

If the diagnostic tests did not identify the device that has failed, if wrong devices are installed, or if the system simply is not operating, follow these procedures to isolate the failing FRU (do not isolate FRUs that have no defects).

Verify that all attached devices are supported by the computer.

Verify that the power supply being used at the time of the failure is operating correctly. See “Power system checkout” on page 24.

1. Turn off the computer.
2. Visually check each FRU for damage. Replace any damaged FRU.
3. Remove or disconnect all of the following devices:
   a. Non-ThinkPad devices
   b. Devices attached to the dock
   c. Printer, mouse, and other external devices
   d. Battery
   e. Solid-state drive
   f. External diskette drive or optical drive
   g. Memory module
   h. PC cards
4. Turn on the computer.
5. Determine whether the problem has been solved.
6. If the problem does not recur, reconnect the removed devices one at a time until you find the failing FRU.
7. If the problem remains, replace the following FRUs one at a time (do not replace a nondefective FRU):
   a. System board
   b. LCD assembly

Locating FRUs and CRUs

This topic introduces the following service parts:

- “Major FRUs and CRUs (for ThinkPad X1 Yoga Gen 8)” on page 48
- “Major FRUs and CRUs (for ThinkPad X1 Carbon Gen 11)” on page 50
- “Miscellaneous parts and other FRUs” on page 52
- “Connector and cable guide” on page 52

Notes:

- Each FRU is available for all types or models, unless otherwise specified.

CRU statement for customers:

You can resolve some problems with your product with a replacement part you can install yourself, called a “Customer Replaceable Unit” or “CRU.” Some CRUs are designated as self-service CRUs and others are designated as optional-service CRUs. Installation of self-service CRUs is your responsibility. For optional-service CRUs, you can either install the CRU yourself or you can request that a Service Provider install the CRU according to the warranty service for your product. If you intend on installing the CRU, Lenovo will ship the CRU to you. CRU information and replacement instructions are shipped with your product and are available from Lenovo at any time upon request. You can find a list of CRUs for your product in this Hardware Maintenance Manual. An electronic version of this manual can be found at https://support.lenovo.com. Click Documentation and then follow the on-screen instructions to find the manual for your product. You might be required to return the defective CRU. When return is required: (1) return instructions, a prepaid shipping label, and a container will be included with the replacement CRU; and (2) you might be charged for the replacement CRU if Lenovo does not receive the defective CRU within thirty (30) days of your receipt of the replacement CRU. See your Lenovo Limited Warranty documentation for full details.

- Your computer contains the following types of CRUs and FRUs:
  - **Self-service CRUs:** Refer to parts that can be installed or replaced easily by customer themselves or by trained service technicians at an additional cost.
  - **Optional-service CRUs:** Refer to parts that can be installed or replaced by customers with a greater skill level. Trained service technicians can also provide service to install or replace the parts under the type of warranty designated for the customer’s machine.
  - **FRUs:** Refer to parts that must be installed or replaced only by trained service technicians. If customers choose to replace the FRUs by themselves, the product warranty might be affected.

## Connector and cable guide

This section provides information for Lenovo authorized service technicians to help identify connectors and cables for replacement purpose. To view each FRU and the exploded illustration of the computer, see “Major FRUs and CRUs (for ThinkPad X1 Yoga Gen 8)” on page 48, and “Major FRUs and CRUs (for ThinkPad X1 Carbon Gen 11)” on page 50.

**Note:** Depending on your model, some connectors or cables might not be available.
## System board connectors and cables

Looking up FRU information

For detailed FRU information, including part numbers, descriptions, and substitution part numbers, go to: https://support.lenovo.com/partslookup
Chapter 7. FRU replacement notices

Read this chapter carefully before replacing any FRU.

Service tool kit

Ensure that the following service tool kit is prepared before you service a notebook computer.

<table>
<thead>
<tr>
<th>No.</th>
<th>Tool name</th>
<th>Tool type</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Phillips-head screwdriver</td>
<td>Common tool</td>
</tr>
<tr>
<td>2</td>
<td>Conductive tweezers</td>
<td>Common tool</td>
</tr>
<tr>
<td>3</td>
<td>Silicone grease</td>
<td>Consumable tool</td>
</tr>
<tr>
<td>4</td>
<td>Polyamide tape</td>
<td>Consumable tool</td>
</tr>
<tr>
<td>5</td>
<td>Mylar tape</td>
<td>Consumable tool</td>
</tr>
<tr>
<td>6</td>
<td>Eraser</td>
<td>Consumable tool</td>
</tr>
<tr>
<td>7</td>
<td>Electrical tape</td>
<td>Consumable tool</td>
</tr>
<tr>
<td>8</td>
<td>Double-sided tape</td>
<td>Consumable tool</td>

<tr>
<td>9</td>
<td>Conductive tape</td>
<td>Consumable tool</td>
</tr>
<tr>
<td>10</td>
<td>Trackpad jig (this might come with trackpad)</td>
<td>Consumable tool</td>
</tr>
</tbody>
</table>

**Note:** The silicone grease can be applied to the surfaces of the microprocessor and heatsink to eliminate air gaps.

Screw notices

Loose screws can cause a reliability problem. In your computer, this problem is addressed with special nylon-coated screws that have the following characteristics:

- They maintain tight connections.
- They do not easily come loose, even with shock or vibration.
- They are harder to tighten.

Do the following when you service the computer:

- Keep the screw kit in your tool bag. For the part number of the screw kit, go to: [https://support.lenovo.com/partslookup](https://support.lenovo.com/partslookup)

Tighten screws as follows:

- **Plastic to plastic**
  - Turn an additional angle of 90 degrees after the screw head touches the surface of the plastic part.
• **Logic card to plastic**
  Turn an additional angle of 180 degrees after the screw head touches the surface of the logic card.

**Notes:**

• Ensure that you use the correct screw. It is recommended to use new screws for replacements. If you have a torque screwdriver, tighten all screws firmly to the torque specified in the screw information table for each step.

• Ensure torque screwdrivers are calibrated correctly following country specifications.

---

### Sensor calibration

If your system board or LCD unit has been replaced, do the following to make sensor calibration:

1. Download the Windows Sensor Calibration Tool by following steps:

   **Notes:** This Sensor Calibration Tool is limited to Lenovo service providers. You can contact a Lenovo authorized service provider to have your system board or LCD unit replaced.

   a. Go to [https://support.lenovo.com](https://support.lenovo.com).

   b. Log in to your Lenovo account on the Lenovo support website.

   c. Search for the product name, and then search for the Sensor Calibration Tool on the product page to download it.

2. Extract the tool into a local driver, such as `D:\WinCalibration`.

3. Type `WindowsCalibrationTool.exe -calibrate a -minimal -updateiss -primaryonly` to create a `Update.bat` file as shown. Then, copy the file to the same folder of the Windows Sensor Calibration Tool.

4. Run the `Update.bat` file as Administrator.

5. Lay down the computer with the LCD panel facing up as shown and then follow the on-screen instructions to start the calibration process.
6. Rotate the computer into Tablet mode and then follow the on-screen instructions to complete the calibration process.

   **Note:** You might need to rotate the LCD display in every aspect to ensure each YOGA mode works well.

---

## Retaining serial numbers

This topic provides instructions on the following:

- “Restoring the serial number of the system unit” on page 59
- “Retaining the UUID” on page 60

### Restoring the serial number of the system unit

When the computer was manufactured, the EEPROM on the system board was loaded with the serial numbers of the system and all major components. These numbers need to remain the same throughout the life of the computer.

If you replace the system board, you must restore the serial number of the system unit to its original value.

The serial number of the system unit is written on the label attached to the bottom of the computer.

If you cannot find the serial number of the system unit on the bottom of the computer, try the following method to get the number:

   **Note:** For Intel models, before you perform the operation, ensure that the UEFI/Legacy setting within the **Startup** menu in the ThinkPad Setup program is set to **UEFI Only**.

1. Connect a USB memory key to the computer.
2. Go to [https://www.lenovo.com/maintenanceutilities](https://www.lenovo.com/maintenanceutilities) and follow the instructions on the screen to create a Maintenance Key.

   **Note:** Only an authorized Lenovo service technician can access the above Web site.
3. Restart the computer.
4. When the logo is displayed, press Esc. The ThinkPad Config Information Update Utility interface is displayed.

5. Type 1 under **Enter the action desired**, then press Enter. The ThinkPad Serial Number Update Utility for Asset ID screen is displayed.

6. Type 2 under **Enter the action desired**, then press Enter. The serial number of each device in your computer is displayed; the serial number of the system unit is listed as follows:

   20- Serial number

7. Record the serial number of the system unit.

After you replace the system board, do the following to restore the serial number of the system unit:

1. Connect the Maintenance Key to the computer.
2. When the logo is displayed, press Esc. The ThinkPad Config Information Update Utility interface is displayed.
3. Type 1 under **Enter the action desired**, then press Enter. The ThinkPad Serial Number Update Utility for Asset ID screen is displayed.
4. Type 1 under **Enter the action desired**, then press Enter. Then follow the instructions on the screen to restore the serial number of the system unit.

**Retaining the UUID**

The Universally Unique Identifier (UUID) is a 128-bit number uniquely assigned to your computer at production and stored in the EEPROM of your system board.

The algorithm that generates the number is designed to provide unique IDs until the year A.D. 3400. No two computers in the world have the same number.

When you replace the system board, perform the following steps to create a new UUID for the system board if the system board does not have a UUID:

**Note:** For Intel models, before you perform the operation, ensure that the UEFI/Legacy setting within the Startup menu in the ThinkPad Setup program is set to **UEFI Only**.

1. Connect a USB memory key to the computer.
2. Go to [https://www.lenovo.com/maintenanceutilities](https://www.lenovo.com/maintenanceutilities) and follow the instructions on the screen to create a Maintenance Key.
   
   **Note:** Only an authorized Lenovo service technician can access the above Web site.
3. Restart the computer.
4. When the logo screen is displayed, press Esc. The ThinkPad Config Information Update Utility interface is displayed.
5. Type 2 under **Enter the action desired**, then press Enter. The Auto UUID generation utility interface is displayed.
6. Type y under **Change UUID. OK? [Y/N]**, then press Enter. A new UUID is created and written. If a valid UUID already exists, it is not overwritten.

**Reading or writing the ECA information**

Information on Engineering Change Announcements (ECA) is stored in the EEPROM of the system board. The electronic storage of this information simplifies the procedure to check if the ECA has been previously applied to a machine. The machine does not need to be disassembled to check for the ECA application.

To check what ECAs have been previously applied to the machine, use the ECA Information Read/Write function on the LENOVO ThinkPad Hardware Maintenance Diskette or Maintenance Key.
1. Insert the latest version of LENOVO ThinkPad Hardware Maintenance Diskette or Maintenance Key, and then restart the computer.

2. From the main menu, select 6. Set ECA Information.

3. To read the ECA information, select 2. Read ECA/rework number from EEPROM and follow the instructions on the screen. To read the box build date, select 5. Read box build date from EEPROM, and follow the instruction on the screen.

After an ECA has been applied to the machine, the EEPROM must be updated to reflect the ECA’s application. Use the latest version of LENOVO ThinkPad Hardware Maintenance Diskette or Maintenance Key to update the EEPROM.

**Note:** Only the ECA number is stored in the EEPROM. The machine type of the ECA is assumed to be the same as the machine type of the machine that had the ECA applied to it.

1. Insert the latest version of LENOVO ThinkPad Hardware Maintenance Diskette or Maintenance Key, and then restart the computer.

2. From the main menu, select 6. Set ECA Information.

3. To write the ECA information, select 1. Write ECA/rework number from EEPROM, and follow the instructions on the screen. To write the box build date, select 4. Write box build date from EEPROM, and follow the instruction on the screen.

If the system board is being replaced, try to read the ECA information from the old system board and transfer the information to the new system. If the system board is inoperable, this will not be possible.
Chapter 8. Removing or replacing a FRU

This chapter provides instructions on how to remove or replace a FRU.

General guidelines

When removing or replacing a FRU, be sure to observe the following general guidelines:

1. Do not try to service any computer unless you have been trained and certified. An untrained person runs the risk of damaging parts.
2. Before replacing any FRU, review Chapter 7 “FRU replacement notices” on page 57.
3. Begin by removing any FRUs that have to be removed before replacing the failing FRU. Any such FRUs are listed at the beginning of each FRU replacement section. Remove them in the order in which they are listed.
4. Follow the correct sequence in the steps for removing a FRU, as given in the illustrations by the numbers in square callouts.
5. When turning a screw, turn it in the direction as given by the arrow in the illustration.
6. When removing a FRU, move it in the direction as given by the arrow in the illustration.
7. To put the new FRU in place, reverse the removal procedure and follow any notes that pertain to replacement.
8. When replacing a FRU, use the correct screws as shown in the replacement procedures.

⚠️ DANGER

Before removing any FRU, turn off the computer, unplug all power cords from electrical outlets, disable the built-in battery, and then disconnect any interconnecting cables.

Attention:

- After replacing a FRU, do not turn on the computer until you have made sure that all screws, springs, and other small parts are in place and none are loose inside the computer. Verify this by shaking the computer gently and listening for rattling sounds. Metallic parts or metal flakes can cause electrical short circuits.
- The system board is sensitive to, and can be damaged by ESD. Before touching it, establish personal grounding by touching a ground point with one hand or by using an ESD strap.

Before servicing the computer

Carefully read this topic before servicing the computer.

Disabling the built-in battery

Before replacing any FRU, ensure that you disable Fast Startup first and then disable the built-in battery.

To disable Fast Startup:

1. Go to Control Panel and view by Large icons or Small icons.
2. Click Power Options, and then click Choose what the power buttons do on the left pane.
3. Click Change settings that are currently unavailable at the top.
4. If prompted by User Account Control (UAC), click Yes.
5. Clear the **Turn on fast startup** check box, and then click **Save changes**.

To disable the built-in battery:
1. Restart your computer. When the logo screen is displayed, immediately press F1 to enter the UEFI BIOS menu.
2. Select **Config ➔ Power**. The **Power** submenu is displayed.
3. Select **Disable built-in battery** and press Enter.
4. Select **Yes** in the Setup Confirmation window. The built-in battery is disabled and the computer turns off automatically. Wait three to five minutes to let the computer cool.

**Removing the nano-SIM card**

If the computer has a nano-SIM card installed, remove the nano-SIM card before you start the servicing. The following is the removal procedure of the nano-SIM card.

![Nano-SIM card removal procedure](image)

After you finish the servicing, ensure that you install the removed nano-SIM card back into the computer.

**Removing ThinkPad Pen Pro (for ThinkPad X1 Yoga Gen 8)**

If the computer has a ThinkPad Pen Pro installed, remove the pen before you start servicing.

![ThinkPad Pen Pro removal](image)

2 GEO label | 3 CECP label
3 Asset tag | 4 Windows label
4 S/N label | 5 COA label
6 Country label
1020 Built-in battery

Important notices for replacing a battery

Attention: Lenovo has no responsibility for the performance or safety of unauthorized batteries, and provides no warranties for failures or damage arising out of their use.

The Lenovo Solution Center program provides an automatic battery diagnostic test that determines if the battery is defective. A battery FRU should not be replaced unless this diagnostic test shows that the battery is defective. The only exception to this is if the battery is physically damaged or a customer is reporting a possible safety issue.

If the Lenovo Solution Center program is not installed on the computer, the customer should download and install the program to diagnose the battery, before getting a non-physically damaged battery replaced. Note that the replacement of a physically damaged battery is not covered by the warranty.

For access, remove this FRU:
• “Removing ThinkPad Pen Pro (for ThinkPad X1 Yoga Gen 8)” on page 64
• “1010 Base cover assembly” on page 64

Removal steps of the built-in battery

⚠️ DANGER

Use only the authorized battery specified for your computer. Any other battery could ignite or explode.

<table>
<thead>
<tr>
<th>Step</th>
<th>Screw (quantity)</th>
<th>Color</th>
<th>Torque</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>M2 × L4.5 mm, flat-head, nylon-coated (6)</td>
<td>Silver</td>
<td>0.181 Nm (1.85 kgf-cm)</td>
</tr>
</tbody>
</table>

When installing: Align the connector of the built-battery with the key in the slot. Then, insert the battery into the slot at an angle of about 35 degrees and pivot the battery downwards. Press the battery connector and tighten screws to secure built-in battery assembly.
1030 M.2 SSD, bracket, and thermal pad

For access, remove this FRU:
• “1010 Base cover assembly” on page 64

Attention:
• Do not drop the drive or apply any physical shock to it. The drive is sensitive to physical shock. Improper handling can cause damage and permanent loss of data.
• Before removing the drive, have the user make a backup copy of all the information on it if possible.
• Never remove the drive while the system is operating or in sleep mode.
• In case of M.2 SSD replacement, your computer only supports single-sided M.2 SSD. Double-sided M.2 SSD is not applicable due to the height limitation of the slot.
• When handling the M.2 solid-state drive, remove or insert the M.2 solid-state drive horizontally. Otherwise the slot might get damaged.

Removal steps of M.2 SSD, SSD bracket and thermal pad

</tbody>
</table>

Installation procedure

- **Type one: 4G wireless WAN card**

  **Note:** Attach the bracket to the wireless WAN card 1. Insert the wireless WAN card and bracket into the slot at an angle of about 20 degrees 2, and pivot downward 3. Install the screw to secure the wireless WAN card and bracket. 4. Ensure that you connect the blue cable to 1 connector and the orange cable to 2 connector as shown 5.

- **Type two: 5G wireless WAN card**
1. There might be a wireless WAN card bracket preinstalled on your computer. You might need to remove the bracket before the installation of a 5G wireless WAN card.

2. Insert the wireless WAN card into the slot at an angle of about 20 degrees, and pivot downward. Install the screw to secure the wireless WAN card. Ensure you connect the blue cable to connector, the black with grey cable to connector, the white cable to connector, and the orange cable to connector as shown.

1100 NFC module and the sponge

For access, remove these FRUs:
- “1010 Base cover assembly” on page 64
- “1020 Built-in battery” on page 66

1110 Trackpad, P sensor and and NFC cable

For access, remove these FRUs in order:
- “1010 Base cover assembly” on page 64
- “1020 Built-in battery” on page 66
Removal steps of the trackpad, P sensor and NFC cable (for model with NFC module)
Removal steps of the trackpad and P sensor cable (for model without NFC module)
1120 Power button with fingerprint reader module and bracket

For access, remove these FRUs in order:
- “1010 Base cover assembly” on page 64

*Removal steps of the fingerprint reader module and bracket*

Installation steps of trackpad

1. A trackpad jig might come with the trackpad which is used for fixing the location of the trackpad. Attach the trackpad jig to the trackpad and bend the four angles as shown by arrows below.

2. Install the trackpad with jig as shown.
3. Install the screws to fix the trackpad.

4. Remove the Jig.

1140 Coin-cell battery

For access, remove these FRUs:
• “1010 Base cover assembly” on page 64
• “1020 Built-in battery” on page 66
1150 Speaker assembly

For access, remove these FRUs:
- “1010 Base cover assembly” on page 64
- “1020 Built-in battery” on page 66
- “1050 Pen charger (for ThinkPad X1 Yoga Gen 8 only)” on page 70

Removal steps of the speaker assembly (for ThinkPad X1 Yoga Gen 8)
Step | Screw (quantity) | Color | Torque
--- | --- | --- | ---
4 | M2 × L3.5 mm, flat-head shoulder, nylon-coated (2) | Black | 0.181 Nm (1.85 kgf-cm)
5 | M2 × L2.2 mm step screw, flat-head shoulder, nylon-coated (4) | Black | 0.181 Nm (1.85 kgf-cm)

Removal steps of the speaker assembly (for ThinPad X1 Carbon Gen 11)
### 1160 Wireless-WAN antenna assembly

For access, remove these FRUs in order:
- “1010 Base cover assembly” on page 64
- “1020 Built-in battery” on page 66
- “1050 Pen charger (for ThinkPad X1 Yoga Gen 8 only)” on page 70

</tbody>
</table>

**Attention:** When you route the cables, ensure that they are not subject to any tension. Tension could cause the cables to be damaged by the cable guides, or a wire to be broken.

### 1170 System board assembly

**Important notices for handling the system board**

When handling the system board, read the following:

- The system board has an accelerometer, which can be broken when several thousands of G-forces are applied.
**Note**: Dropping a system board from a height of as little as six inches so that it falls flat on a hard bench can subject the accelerometer to as much as 6000 G’s of shock.

- Be careful not to drop the system board on a bench top that has a hard surface, such as metal, wood, or composite.
- Avoid rough handling of any kind.
- At every point in the process, be sure not to drop or stack the system board.
- If you put a system board down, be sure to put it only on a padded surface such as an ESD mat or a corrugated conductive material.

For access, remove these FRUs in order:
- “1010 Base cover assembly” on page 64
- “1020 Built-in battery” on page 66
- “1030 M.2 SSD, bracket, and thermal pad” on page 67
- “1040 Wireless WAN card and bracket (for selected models)” on page 68
- “1070 Thermal fan assembly” on page 72
- “1080 Audio board” on page 72
- “1090 USB board” on page 73

**Removal steps of the system board assembly**

This computer shares a common system board with another computer. After replacing the system board, you will be prompted to input a brand name to correctly identify the machine type. The following table contains the brand name required to complete this step.

**Note**: Input the exact brand name as shown in this table.

<table>
<thead>
<tr>
