Chapter 1

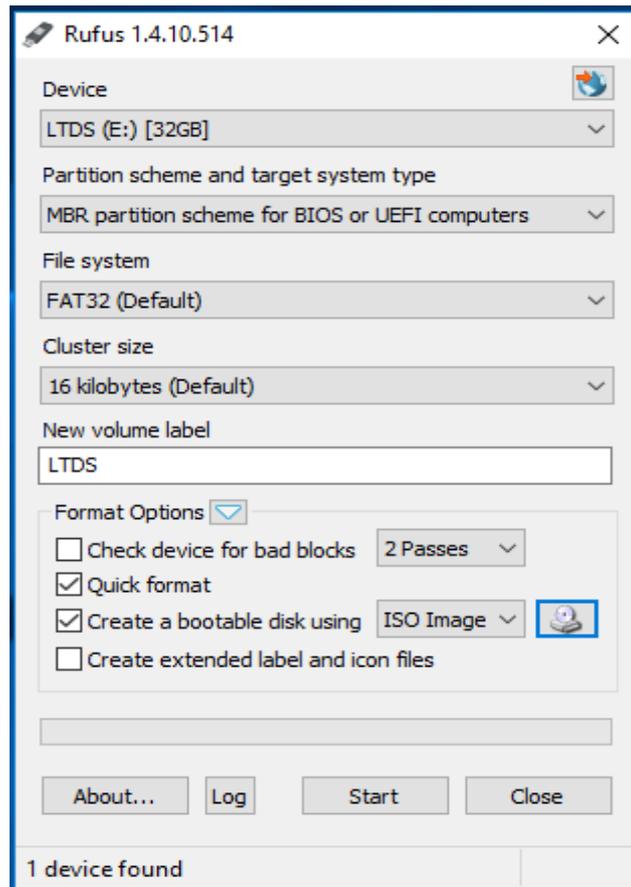

Introduction

Lenovo® ThinkServer® Diagnostics Standalone Edition is a diagnostic tool that will run before your server boots into an operating system. The user can boot the diagnostics from a USB key inserted in their system. The Diagnostics tool can detect ThinkServer hardware components and display running status and firmware information. The screen resolution's default value is 1024x768 (Please note that the boot logo may be distorted on some widescreen monitors, but no functions will be impacted).

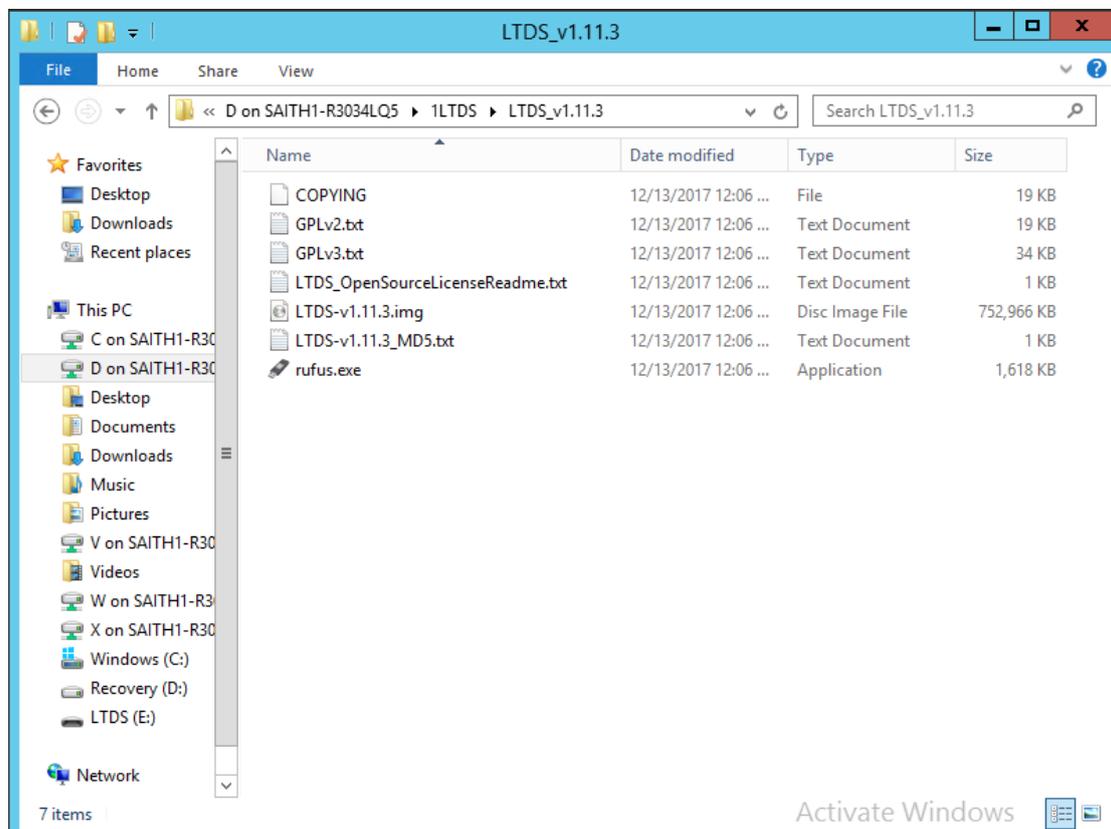

Chapter 2

Creating a Bootable USB key

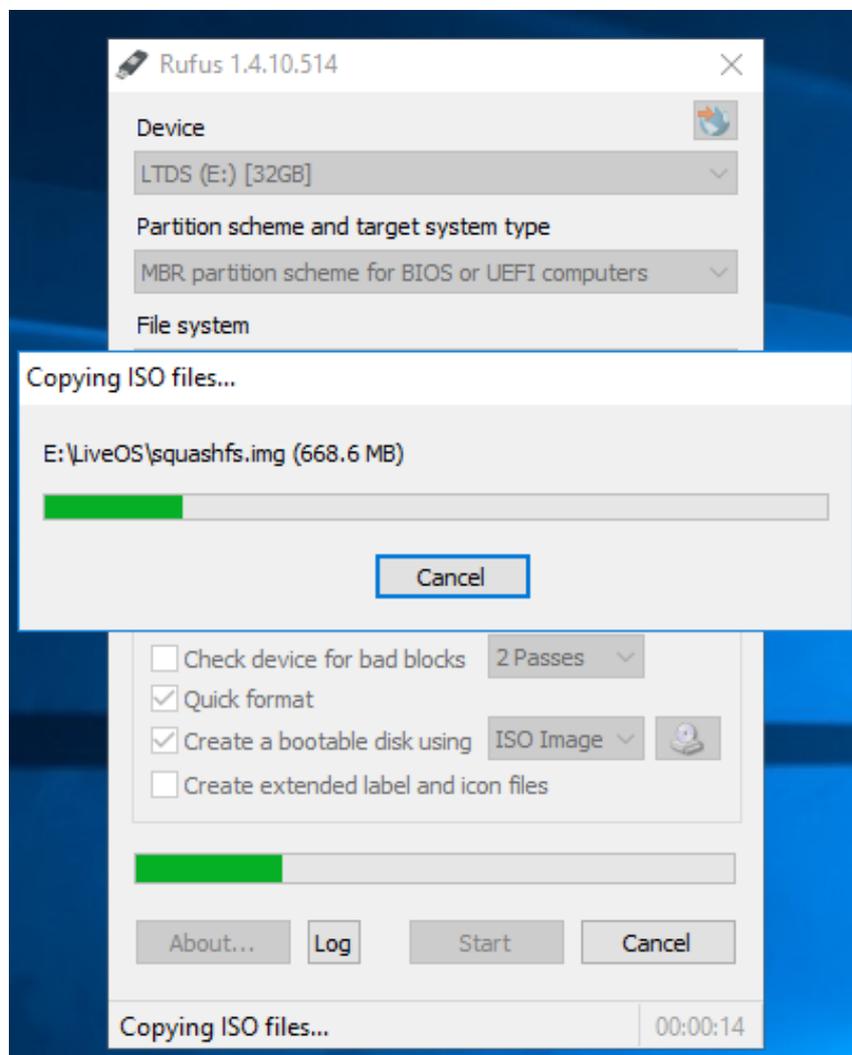

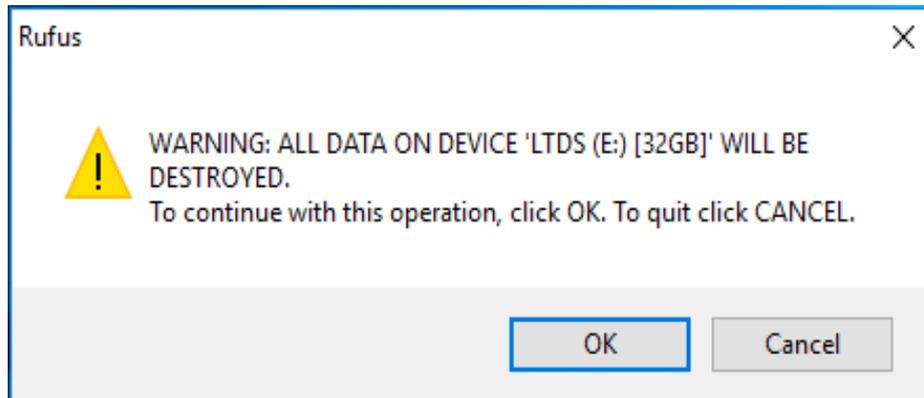

1. Before you start, ensure that you prepare the bootable USB key on a Windows operating system.
2. Download the latest Diagnostics software package from the Lenovo Support web site:
<http://support.lenovo.com>
3. Plug in the USB key, and run rufus-*.exe.
4. For the **Create a bootable disk using** option, select **ISO Image**.
5. Click the **Browse** button to select the image file of Lenovo ThinkServer Diagnostics Standalone Edition.

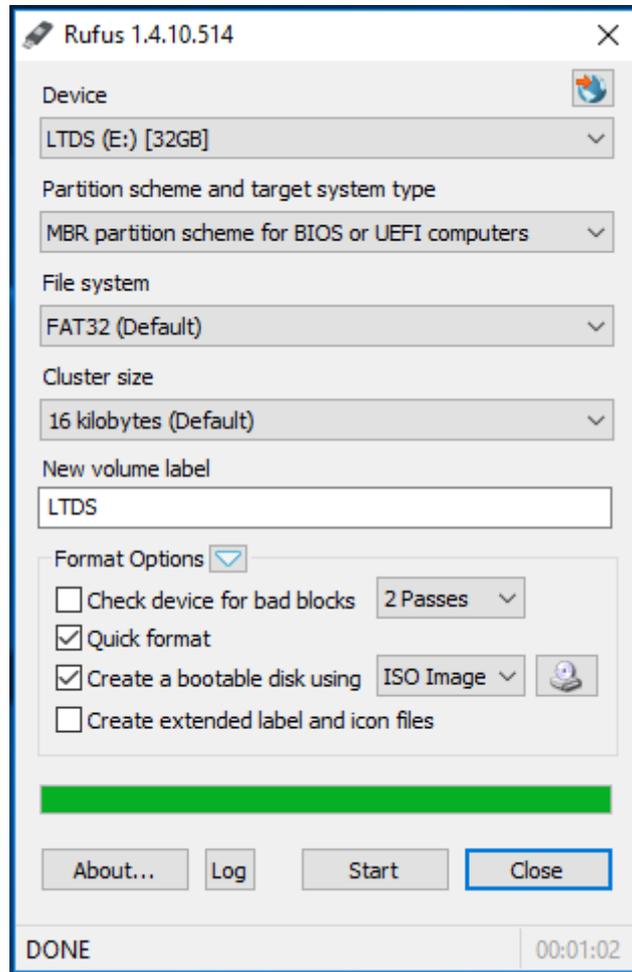

6. Select **ISO Image** in the filter drop-down list, and open the *****.img** file.

7. Click **Start**, and a prompt window is displayed. Click **OK** to continue.

- When the status bar at the bottom of the window displays **DONE**, click **Close**.

Chapter 3

Configuring BIOS Settings and Booting up

Lenovo ThinkServer Diagnostics Standalone Edition supports both UEFI and Legacy boot modes.

Note: Ensure that secure boot is disabled (default) in the BIOS setup.

Boot up in UEFI Mode

1. Turn on the server, and press F1 as soon as you see the logo screen to enter the BIOS setup menu.
2. Go to the **Boot Manager** page.
3. For **Boot Mode**, select **Auto** (default).
4. Go to the **Miscellaneous Boot Setting** page.
5. For **Storage OpRom Policy**, select **UEFI only** (default).
6. For **Video OpRom Policy**, select **Legacy only** (default).
7. For **Other PCIE device**, select **UEFI only** (default).
8. Press F10 to save the configuration and exit the BIOS setup menu.
9. Press F12 as soon as you see the logo screen to enter the boot menu.
10. Select **UEFI USB Disk Device** to boot from the USB key.

Boot up in Legacy Mode

1. Turn on the server, and press F1 as soon as you see the logo screen to enter the BIOS setup menu.
2. Go to the **Boot Manager** page.
3. For **Boot Option**, select **Auto**.
4. Go to the **Miscellaneous Boot Settings** page.
5. For **Storage OpRom Policy**, select **Legacy only**.
6. For **Video OpRom Policy**, select **Legacy only** (default).
7. For **Other PCIE device**, select **Legacy only**.
8. Go back to **Boot Manager**, and change **Boot Sequence** so that the legacy USB device is set as the first one.
9. Press F10 to save the configuration and exit the BIOS setup menu.
10. Press F12 as soon as you see the logo screen to enter the boot menu.
11. Select **Legacy USB Disk Device** to boot front the USB key.

Chapter 4

Main User Interface

Lenovo ThinkServer Diagnostics Standalone Edition provides a selectable menu for users to run test items.

```
Lenovo ThinkServer Diagnostics
Standalone Edition

Ver:1.11.3

-----
1. Full Function Test and collect information
2. Collect information only
3. Quick Memory Test
4. Extended Memory Test
5. Harddrive Test

I/i . Display Hardware Information
R/r . Reboot
P/p . Poweroff

-----
Tue Dec 19 19:50:59 UTC 2017
-----

Please Input your choice:
```

Test Items Description

1. Full Function Test and collect information

Enter **1** to choose **Full Function Test and collect information**, which includes collect information, Extended Memory Test, and Harddrive Test. A compressed log file will be generated in the configured path.

2. Collect information only

Enter **2** to collect system information (no functional testing is performed). After the system information is collected, a log file will be generated in the previously configured path as a ZIP file.

R/r . Reboot

Enter R or r to restart the machine.

P/p . Poweroff

Enter **P** or **p** to shut down the machine.

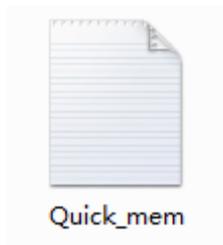

Chapter 5

Test Log

After completing the test, remove the USB key from the Lenovo ThinkServer system and insert it into another system. The compressed log files are located in the root path of the USB key. Extract the log files to a local directory.

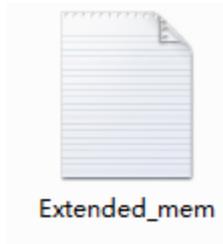

Quick mem test Log

The Quick memory test log is a TXT file.

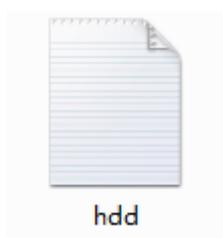

Extended mem test Log

The Extended memory test log is a TXT file.

HDD test log

The HDD test log is a TXT file.

System information logs

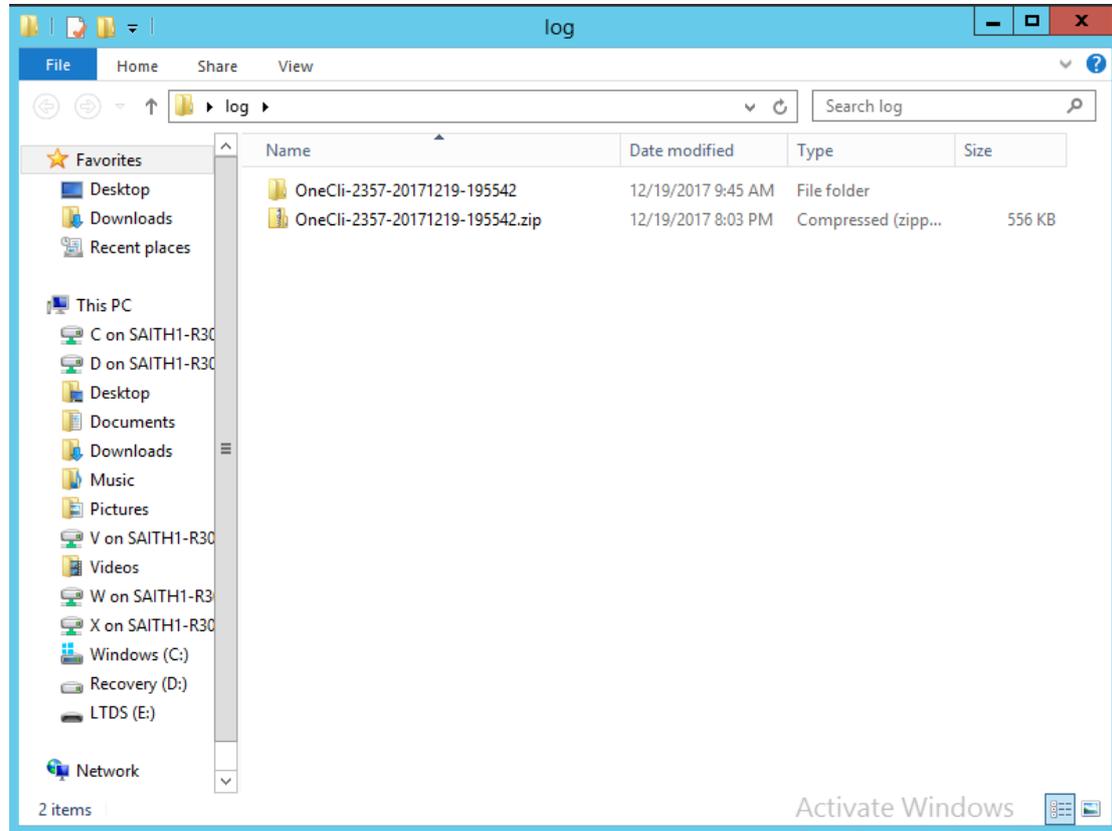

There will be a folder about system information. The folder is named in the following way:

Lenovo ThinkServer Diagnostics Standalone Edition

Onecli-%PID%-%date%-%time%

Raw Logs

Enter the **Onecli-%PID%-%date%-%time%** folder, and you can find system related information stored in TXT files and LOG files.

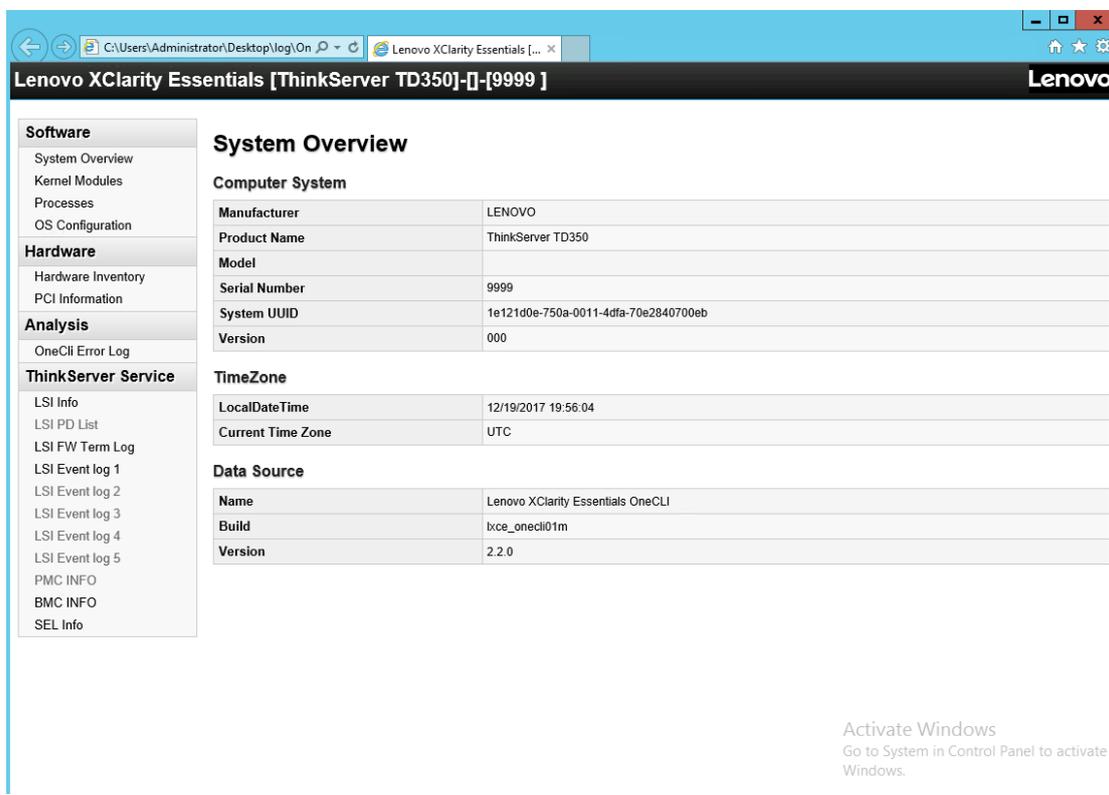

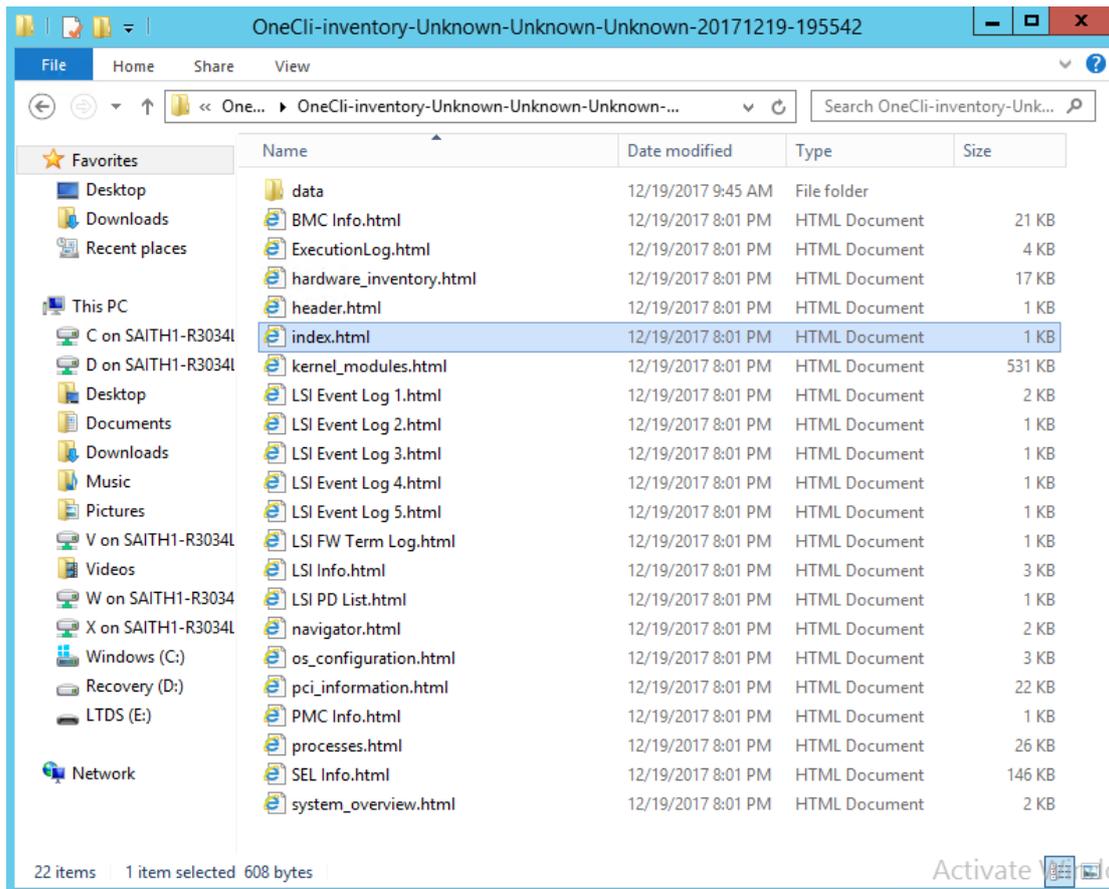

REPORTS directory

The reports directory stores the reports in HTML files. Users can open the HTML files to check system information.

Inside the **Onecli-%PID%-%date%-%time%** folder, there are HTML log files. Users can open each one of them or simply open the index.html file to see the logs.

Following is an introduction of the information you can check on the page in the index.html file. You can check the information in each of the five categories.

In the **Software** category, you can check the following:

System Overview

The System Overview page provides a brief summary of the computer system and operating system.

Kernel Modules

Kernel Modules displays a list of the kernel modules, including Name, Description, Module state, Manufacture, Version and Path.

Processes

This page will display information about all running EXE processes.

OS Configuration

In **OS Configuration**, operation system configurations are provided: User Environment Variables.

In the **Hardware** category, you can check the following:

Hardware Inventory

In **Hardware Inventory**, complete hardware info is provided for: Processor(s), Memory, Storage, PCI Device, Removable Disk(s), Optical Disk(s), Network Adapter(s), and other devices.

PCI Information

The page will list detailed PCI devices information.

In the **Analysis** category, you can check the following:

Onecli Error Log

This page displays the Onecli error and warning logs while executing ToolsCenter Suite CLI.

ThinkServer Service

LSI Info

The **LSI Info** page shows specific details on the RAID controller and the current RAID configuration. In this page, the Product Name, Serial Number, SAS Address, Mfg. Date, System Time, Controller Time, FW Package Build, BIOS Version, FW Version, Driver Name, Driver Version, Bus Number, Device Number, Function Number items are displayed. Disk Group(s) information and Physical Disk(s) information are also displayed.

LSI PD List

The **RAID PD List** page shows specific details of the physical drives. This includes drive temp, SN, WWN, RAW Size, Link speed, etc. This information will be displayed when a RAID card is plugged in the system.

LSI FW Term Log

In **LSI FW Term Log**, Firmware log information is displayed for each adapter.

LSI Event log 1~5

The LSI Events page displays all events (fatal, critical warning and informational combined) and displays the Sequence#, Time, Class, Code, Locale, Event Description and Event Data. LSI Event log 1~4 displays 3000 events, and LSI Event log 5 displays the remaining events.

PMC INFO

The **PMC INFO** page shows specific details on the PMC RAID controller and the current PMC RAID configuration. In this page, the PMC Controller Basic Info, Version Info and PMC other info link are displayed.

BMC INFO

The **BMC INFO** page shows specific details of the BMC information. This includes FW information, self-test result, and PSU information acquired by BMC, BMC LAN information, Sensor data and BMC FRU information.

SEL Info

In the SEL Info page, the Caption, Description, Element name, Log name, Message Timestamp, Record Data, Record ID and Record Format for each event record will be shown.
